¹ Assuming an Inca share price of \$0.006. The implied value of the Offer will vary with the Inca share price as traded on ASX.

- Stunalara has engaged an Independent Expert to advise Stunalara shareholders on the fairness and reasonableness of the Offer as Inca director, Mr Andrew Haythorpe, is also a Stunalara director and holds a ~18.6% Stunalara shareholding. Stunalara has also established an independent board committee.
- ASX has confirmed that Listing Rules 11.1.2 and 11.1.3 do not apply to the transaction.
- Subject to there being no superior proposal and the Independent Expert concluding and continuing to conclude that the Offer is either fair and reasonable, or not fair but reasonable:

Inca's CEO, Trevor Benson commented:

"Having carefully considered a number of acquisition proposals since I was appointed as CEO last year, it became abundantly clear that Stunalara was a standout opportunity. Its high-grade gold & gold-antimony Hurricane Project in NQ presents a unique opportunity to explore a project with multiple strongly mineralised veins which have historical workings but have never been drilled."

"In addition, the under explored Mt Reid project in Western Tasmania is located in an area where multiple significant precious and base metal deposits have been discovered, developed and mined over the last 100 years."

ABOUT STUNALARA

As shown below in Figure 1 Stunalara has three 100% owned exploration projects:

1. The Hurricane Project is a high-grade gold & gold-antimony project located approximately 125 kms north-west of Cairns, in Queensland, Australia. The project consists of 3 granted exploration licences (EPM 27518; EPM 25855; EPM 19437) totaling 75.65 sq kms in the Hodgkinson Basin, east of the Great Dividing Range.
2. Mt Read is located on the west coast of Tasmania, south of Macquarie Harbour, and consists of one granted exploration licence (EL04/2024) covering some 224km². The project provides an opportunity for both Greenfields and Brownfields exploration and is prospective for nickel, copper, cobalt and gold.
3. Western Australian Projects include Mulga Rocks (E28/3451), Boomerang Lakes (Application - ELA29/1264) and Ballard Central North (Application - ELA31/1387). These projects located north and north east of Kalgoorlie have uranium and gold potential.

The Hurricane Project in North Queensland

The Hurricane Project is located in a gold rich province (Figure 2), though the project itself has been lightly explored. Hurricane sits in the Queensland Government's New Economy Minerals Initiative Corridor (November 2019) and having been under-explored is an attractive area to apply modern exploration techniques.

Importantly, Hurricane is centrally located within the northwest-southeast trending geological structures, which hosts numerous gold occurrences, including Anglo Saxon and Fine Gold Creek in the northwest, to the Belfast Hill and Leadingham gold occurrences in the southeast (Figure 2).

Stunalara has a local team in place which allows for rapid execution of exploration programs.

Regional Geology

The regional geology traverses a wide geological timescale from the Devonian in the Hodgkinson Formation through granodiorite and rhyolitic Carboniferous and Permian intrusions to Triassic and Quaternary Sandstones. The Hodgkinson Formation comprises dark grey to greenish, fine to medium quartz greywackes interbedded with siltstones, mudstones and conglomerates. The Carboniferous to Permian granitic, granodioritic and rhyolitic intrusions comprise a suite of felsic porphyritic intrusions. The main porphyritic bodies comprise medium to coarse-grained mineral crystals including subhedral to euhedral hornblende-biotite, k-feldspar and quartz, which locally grade into fine-grained silicified granites.

Local Geology

The three tenements which make up the Hurricane Project are structurally set within two major NW-SE trending faults, being the Hurricane Fault and the Retina Fault. The Hodgkinson Formation dominates these tenements and comprises of tightly folded greywackes, siltstones, shales, cherts, conglomerates and limestones. Locally within the Hurricane Project are 2 felsic intrusions, which occur in EPM 19437 and are predominantly porphyritic granites. These intrusions are the major source of heat, which mobilised hydrothermal fluids to interact with surrounding country rock leading to widespread alteration in the form of silicification, sericite and carbonates, and account for the deposition of gold, silver, and antimony mineralised veins. Mineralisation within the project area is associated with variably altered, silicified and brecciated quartz veins ranging in widths from 2 to >50m. The mineralogy of the Hurricane Project which includes gold, antimony, silver, +/- lead and zinc, leans towards the low sulfidation model.

Previous exploration activities over the project consisted mainly of geological mapping and rock chip sampling across the different prospects including Hurricane North, Hurricane South, Typhoon, Tornado, Cyclone, Monsoon, Holmes, and Bouncer, Figure 3. The rock chip sampling returned numerous high-grade gold and gold-antimony results (as set out below, in Table 1 and in Appendix 1). Importantly despite the encouraging results there has been no exploration drilling to date. A typical example of a mineralised vein from the Hurricane prospect is shown in Figure 4. Locations of samples included in this report are spatially presented in Figure 5.

Mt Read Project – Tasmania

The Project is located on the west coast of Tasmania, south of Macquarie Harbour, and consists of one exploration licence (EL04/2024) (Figure 6).

This area is prolific in terms of world class geology, hosting several significant mines and discoveries, including Hellyer, Mt Lyell, Henty, Renison Bell, Roseberry and Avebury.

Exploration efforts to date have largely focused on porphyry/intrusive-related copper-cobalt-gold mineralisation hosted within the Late Cambrian Mount Read Volcanics at the Thomas Creek Prospect, as well as Nickel-sulphide and platinum-group element mineralisation associated with middle Cambrian mafic and ultramafic rocks of the Hibbs Ultramafic Belt. Significant volcanic hosted massive sulphide (VHMS) and hybrid mineralisation potential also exists within Cambrian Mount Read Volcanic equivalent strata. The Mt Read project is hosted within the same geological package, which hosts major discoveries, including the world class Mt Lyell Cu-Au mine, the Avebury Nickel mine, the Henty gold mine, and the polymetallic (Cu-Pb-Zn-Ag-Au) Hellyer mine, amongst others.

Should the Bid be successful Inca's initial focus will be on refining and reinterpretation of a recent EM Survey conducted over the entire exploration license, and generation of targets for drill testing.

Figure 6: Location of Mt Read project

Western Australia – Uranium focus

Stunalara recently applied for three exploration licences in Western Australia where data search suggests may be prospective for Uranium and gold mineralisation.

- Project 1 - Mulga Rocks - E28/3451
- Project 2 - Boomerang Lakes - ELA29/1264
- Project 3 – Ballard Central North – ELA31/1387

The Mulga Rocks (E28/3451) licence was recently granted and the other two remain under application.

Competent Persons Statement

The geological and rock chips data in this ASX announcement that relates to historical exploration results for the Hurricane Project in Far North Queensland, is based on information compiled by Dr Emmanuel Wembenyui BSc (Hons), MSc Applied Geology and PhD Geochemistry who is a Member of The Australasian Institute of Mining and Metallurgy and The Australian Institute of Geoscientists, MAIG, and fairly represents this information. Dr Wembenyui has sufficient experience, which is relevant to the exploration activities, style of mineralisation and types of deposits under consideration, and to the activity which has been undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Dr Wembenyui is a fulltime employee of Inca Minerals Limited and consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

JORC Code, 2012 Edition – Table 1

Section 1: Sampling Techniques and Data		
Criteria	JORC Code Explanation	Commentary
Sampling techniques	<i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i> <i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i> <i>Aspects of the determination of mineralisation that are Material to the Public Report.</i> <i>In cases where ‘industry standard’ work has been done this would be relatively simple (eg ‘reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay’). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i>	• Rock chip samples were collected in the field by the Placer Gold Ltd Geologist who followed a well- documented protocol and quality was considered to be of good industry standard. Samples were collected at random intervals from the Tornado, Typhoon, Monsoon, Cyclone and Hurricane quartz reefs and surrounding areas. • Rock chip samples were collected from surface outcrop and float along the targets. • All Rock Chip samples were photographed in place with a photo board indicating the date, lease number, sample number and geologist's name. • Approximate sample weights for each rock chip sample was recorded. Individual sample weights varied between 300 grams and several kilograms. • Each sample point was located using a hand-held GPS with +/-5m accuracy utilising MGA zone 55 (GDA94) coordinate system. • Placer Gold Ltd Geology collected a 60kg bulk sample from surface outcrop and float along the Tornado Vein. • Sanworth Pty Ltd collected nine rock chip samples from the Holmes Prospect. Their results are reported in Queensland GSQ Open data portal, report cr19844. Laboratory reports and maps have been cross-checked for accuracy and all data points plotted on the map to confirm locations of reported samples. • Homestake Gold of Australia Ltd collected rock chip vein samples from Typhoon (4), Pedersen (35), Hurricane North and South (18), Bouncer (35). Their results are reported in Queensland GSQ Open data portal, reports cr19824 and cr20231. Laboratory reports and maps have been cross-checked for accuracy. • Homestake completed local grid geological mapping over each of the identified veins and recorded the location of each sample point onto the maps. • The legend on the maps described the types of samples collected: quartz vein float, rock chip, composite soil BLEGS, etc. • Sample numbers, assay method, assay results, the width of sample cut as well as the assay results completed by the Umpire Laboratory were recorded onto the map.
Drilling Techniques	<i>Drill type (eg core, reverse circulation, open- hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</i>	Not applicable as this announcement does not include drill results.
Drill Sample Recovery	<i>Method of recording and assessing core and chip sample recoveries and results assessed.</i>	Not applicable as this announcement does not include drill results.

	<i>Measures taken to maximise sample recovery and ensure representative nature of the samples.</i> <i>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</i>	
Logging	<i>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</i> <i>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</i> <i>The total length and percentage of the relevant intersections logged.</i>	A short geological description was taken at each sample point. The description is qualitative and includes lithology, alteration and mineralisation.
Sub-sampling techniques and sample preparation	<i>If core, whether cut or sawn and whether quarter, half or all core taken.</i> <i>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</i> <i>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</i> <i>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</i> <i>Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling.</i> <i>Whether sample sizes are appropriate to the grain size of the material being sampled</i>	• Rock chip samples collected by Placer Gold Ltd were sent to certified ALS Minerals Laboratory in Stafford, Brisbane, Queensland for sample preparation via an industry standard procedure. • No core or RC drill chips are reported in this announcement, thus core cutting and riffle splitting are not applicable. • All submitted rock chips were crushed and pulverized. The resulting powders/pulps were dissolved by acid digestion and assayed by fire assay with AAS finish for Au and ICPMS for antimony and arsenic. • Rock chip samples collected by Homestake were submitted to Australian Assay Laboratories Group in Aitkenvale for sample preparation and lead fire assay.
Quality of assay data and laboratory tests	<i>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</i> <i>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</i> <i>Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</i>	• The resulting pulp from samples prepared by ALS were assayed for Au using 30g fire assay AAS. • A four-acid digest (ME-MS61) was used for base metal multi-element geochemistry. • No blanks, duplicates or standards were inserted into the sample runs however the samples were collected at close intervals • ALS carry out internal check as per their standard operating procedure by running pulp duplicate analyses, standards (e.g., OREAS) and blanks to assess laboratory contamination and duplicate analyses to evaluate data repeatability and laboratory precision. • Placer Gold geological staff merged the laboratory assays into their sample database templates. • Homestake's rock chip vein samples were analysed by Australian Assay Laboratories Group by 50g fire assay (FA50/D610) with detection limits of 0.01ppm. The laboratory reports quote an accuracy of +/-15%.

Verification of sampling and assaying	<i>The verification of significant intersections by either independent or alternative company personnel.</i> <i>The use of twinned holes.</i> <i>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</i> <i>Discuss any adjustment to assay data</i>	• Random checks were made to check the accuracy of assays reported in the Placer Gold database against ALS Laboratory reports. • Assay results for rock chip samples collected by Placer Gold from the quartz reefs at the Hurricane Project confirmed the range of rock chip sample assays reported by Homestake and Sanworth. • Primary data collected on paper logging sheets in the field were subsequently transferred to an electronic database. • Assay results were received from ALS in excel spreadsheet format and appended to in-house specifically designed Microsoft Excel database. • Rock chip samples collected by Homestake that returned anomalous Au grades, were resubmitted to an Umpire Laboratory, Classic Comlabs for independent analyses. Assay results reported by the Umpire Laboratory confirmed the anomalous results obtained by Australian Assay Laboratories Group.
Location of data points	<i>Accuracy and quality of surveys used to locate drill holes (collar and downhole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</i> <i>Specification of the grid system used.</i> <i>Quality and adequacy of topographic control.</i>	• Placer Gold used a handheld GPS was used to record the location of every rock chip sample collected. • The grid system used is GDA94 Z55. • No topographic surveys were carried out by Placer Gold. • Topographic maps from the Department of Natural Resources, Mines and Energy were downloaded from the www.dnrme.qld.go.au website and used as a reference to crosscheck elevation data read by the GPS. • Homestake completed local grid geological mapping over each of the identified veins and recorded the location of each sample point onto the maps. Sample numbers, assay method, assay results as well as the assay results completed by the Umpire Laboratory were recorded onto the map.
Data spacing and distribution	<i>Data spacing for reporting of Exploration Results.</i> <i>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</i> <i>Whether sample compositing has been applied</i>	• Surface rock chip samples were collected at 20 to 30m intervals along the outcropping reefs and quartz veins. • The data collected to date confirms the geological continuity of each reef. • Further sampling and drilling are needed to confirm and evaluate grade continuity along each of the identified reefs.
Orientation of data in relation to geological structure	<i>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</i> <i>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</i>	Samples were collected along defined geological structures of interest, being altered and brecciated quartz veins. Sampling was carefully done to ensure that there was no bias by ensuring that each sample fully represented the alteration and geological variability of each sampling station.
Sample security	<i>The measures taken to ensure sample security</i>	All samples taken by the Geologist were either directly delivered to Toll Ipec, Cairns, which shipped them to ALS laboratory in Brisbane or were personally delivered by car to the ALS laboratory.
Audits or reviews	<i>The results of any audits or reviews of sampling techniques and data.</i>	GPS data was audited and reviewed, and all errors were removed. Only 4 out of 580 points had errors that were fixed.

Section 2: Reporting of Exploration Results

Criteria	JORC Code Explanation	Commentary

The Project tenements also partially overlap 254WRM9 (Nychum Station} and 5112HG843453 (Kondaparinga Station). - A Code and Compensation Agreement is in place with the Hurricane Station landowner (1DA802415} to facilitate Advanced Exploration Activities including drilling. - Native Title does not exist on 1DA802415 (Hurricane Station). Native Title claim QCD2012/005 (Djungan People#3} overlaps 254WRM9 (Nychum Station) and 5112HG843453 (Kondaparinga Station). - Security held by QLD Government DNRME and DES includes \$2,500 for EPM19437, \$500 for EPM25855 and \$500 for EPM27518.
Exploration done by other parties	Acknowledgment and appraisal of exploration by other parties.	- ATP4259 CRN19844 - In 1988 Sanworth Pty Ltd/ Hawk Investments Ltd held tenure over the western extent of the Prospective Corridor near Retina Fault. Rock chip sampling carried out in the area identified the Holmes Anomaly prospect (Now located on EPM19437). - ATP5090 CRN19824 - In 1988 Homestake explored the Prospective Corridor south of the Mitchell River. Exploration in the western extent of Prospective Corridor near the Retina Fault identifies the prospects Pedersen's, Bouncer and Bouncer South (now located on EPM27518) Exploration in the eastern extent of Prospective Corridor near Hurricane Fault identifies the Hurricane Group of prospects Hurricane South, Hurricane North and Typhoon (now located on EPM25855). - EPM9986 CRN27131 - In 1995 Pan Australian Pty Ltd held tenure over the Prospective Corridor between Retina Fault and Hurricane Fault. Stream sediment sampling identified and mapped the boundaries of the Holmes Anomaly catchment area (now located on EPM19437 and EPM25855) and Moriarty Anomaly catchment area (now located on EPM27518).
Geology	Deposit type, geological setting and style of mineralisation.	Epigenetic Quartz Gold Stibnite veins
Drill hole information	A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: - easting and northing of the drill hole collar - elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar - dip and azimuth of the hole - down hole length and interception depth - hole length.	There is no reported historical drilling data over the Project Area

	<i>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i>	
Data aggregation methods	<i>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</i> <i>Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</i> <i>The assumptions used for any reporting of metal equivalent values should be clearly stated.</i>	All reported results are for individual samples. No data aggregation was applied.
Relationship between mineralisation widths and intercept lengths	<i>These relationships are particularly important in the reporting of Exploration Results.</i> <i>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</i> <i>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').</i>	Reported results are for individual rock chip samples. Each sample was collected from the surface and was fully representative of each sample point
Diagrams	<i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i>	Refer to figures in the body of the text.
Balanced reporting	<i>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</i>	The Company believes that the ASX announcement is a balanced report with all material results reported. All reviewed and collated data have been reported in a fair and balanced way that fully shows the extent of work that has previously been completed over these tenements. No other available information has been omitted from this report.
Other substantive exploration data	<i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results;</i>	Everything meaningful and material is disclosed in the body of the report. Geological observations have been factored into the report.

	<i>geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</i>	
Further work	<i>The nature and scale of planned further work (eg tests for lateral extensions or large-scale step out drilling).</i> <i>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i>	The first phase of work by Inca Minerals will be to verify the historical results reported in this announcement. This will be done by direct field visits and sampling of the reported mineralised veins to determine whether the new data matches the historical datasets in this announcement. Once the new data has been verified and reconciled with historic rock chip data, all geochemical will then be collated to identify sampling gaps that need infill sampling. Results from geochemical sampling and mapping programs will be synthesised to prioritise veins that require additional intensive sampling and mapping to determine their potential to host significant concentrations of gold and/or gold-antimony bearing minerals. All prospects that present significance for large-tonnage gold/antimony and any other mineralisation will be drilled to assess depth continuity and geometry.

- whether direct or indirect, solicited or unsolicited, and in writing or otherwise unless (and only to the extent that) the Stunalara Board, acting in good faith and having regard to external legal advice, determines that it would be a breach of their fiduciary or statutory duties to notify Inca.
- (b) A notification given under clause 6.4(a) must include a summary of all material terms and conditions of the relevant actual, proposed or potential Competing Proposal (and the identity of the party making or proposing the relevant actual, proposed or potential Competing Proposal if such disclosure is not prohibited by the Competing Proposal)) unless (and only to the extent that) the Stunalara Board, acting in good faith and having regard to external legal advice, determines that it would be, or would likely be, a breach of their fiduciary or statutory duties to notify Inca.
- (c) Commencing upon the provision of any notice referred to in clause 6.4(a), Stunalara must as soon as possible advise Inca of any material developments in relation to an actual, proposed or potential Competing Proposal, including material amendments or proposed amendments to the terms of such actual, proposed or potential Competing Proposal, and advise Inca of the timing of any board meeting to consider that proposal unless (and only to the extent that) the Stunalara Board, acting in good faith and having regard to external legal advice, determines that it would be a breach of their fiduciary or statutory duties to notify Inca.

6.5 Matching right

- (a) Without limiting clause 6.2, during the Exclusivity Period, Stunalara:

- (i) must not enter into any legally binding agreement, arrangement or understanding (whether or not in writing) pursuant to which a Third Party, Stunalara or both proposes or propose to undertake or give effect to an actual, proposed or potential Competing Proposal; and
- (ii) must procure that none of its directors change their recommendation of the Takeover Bid or publicly recommend an actual, proposed or potential Competing Proposal or recommend against the Takeover Bid (provided that a statement that no action should be taken by Stunalara Shareholders pending the assessment of a Competing Proposal by the Stunalara Board and its advisers shall not contravene this clause),

unless:

- (iii) the Stunalara Board acting in good faith and in order to satisfy what the members of the Stunalara Board consider to be their statutory or fiduciary duties (having received written advice from its external financial and legal advisers) determines that the Competing Proposal would be or would be likely to be an actual, proposed or potential Superior Proposal;
 - (iv) Stunalara has complied with clause 6.4(b);
 - (v) Stunalara has given Inca at least 5 Business Days after the date of the provision of the information referred to in clause 6.4(b) to provide a matching or superior proposal to the terms of the actual, proposed or potential Competing Proposal; and
 - (vi) Inca has not announced or otherwise formally proposed to Stunalara a matching or superior proposal to the terms of the actual, proposed or potential Competing Proposal by the expiry of the 5 Business Day period in clause 6.5(a)(v) above.
- (b) If Inca proposes to Stunalara, or announces, amendments to the terms of the Takeover Bid including increasing the amount of consideration offered under the Offer or a new proposal that constitutes a matching or superior proposal to the terms of the actual, proposed or potential Competing Proposal (**Counterproposal**) by the expiry of the 5 Business Day period in clause 6.5(a)(v) above, Stunalara must procure that the Stunalara Board considers the Counterproposal and if the Stunalara Board, acting reasonably and in good faith, determines that the Counterproposal (as completed) would provide an equivalent or superior outcome for Stunalara Shareholders as a whole compared with the Competing Proposal, then Stunalara and Inca must use their best endeavours to agree the amendments to this agreement that are reasonably necessary to reflect the Counterproposal and to implement the Counterproposal, in each case as soon as reasonably practicable, and Stunalara must procure that each of the Stunalara Directors continue to recommend the Takeover Bid (as modified by the Counterproposal) to Stunalara Shareholders.

6.6 Cease discussions

Stunalara must, and must procure that its Related Bodies Corporate, cease any discussions or negotiations existing as at the date of this agreement relating to:

- (a) any actual, proposed or potential Competing Proposal; or
- (b) any transaction that would, or would reasonably be expected to, reduce the likelihood of success of the Takeover Bid,

provided that nothing in this clause 6.6 will require Stunalara to cease any discussions or negotiations with respect to an Excluded Arrangement.

6.7 Provision of information by Stunalara

- (a) Subject to clause 6.7(b), during the Exclusivity Period, Stunalara must as soon as possible provide Inca with:
- (i) in the case of written materials, a copy of; and
 - (ii) in any other case, a written statement of,
- any material non-public information about the business or affairs of Stunalara or the Stunalara Group disclosed or otherwise provided to any Third Party in connection with an actual, proposed or potential Competing Proposal that has not previously been provided to Inca.
- (b) Stunalara will not, and will procure that none of its Related Persons provide any information to a Third Party in relation to an actual, proposed or potential Competing Proposal, unless:
- (i) permitted by clause 6.3; and
 - (ii) that Third Party has entered into a confidentiality agreement with Stunalara on customary terms.

6.8 Compliance with law

- (a) If it is finally determined by a court, or the Takeovers Panel, that the agreement by the parties under this clause 6 or any part of it:
- (i) constituted, or constitutes, or would constitute, a breach of the fiduciary or statutory duties of the Stunalara Board;
 - (ii) constituted, or constitutes, or would constitute, 'unacceptable circumstances' within the meaning of the Corporations Act; or
 - (iii) was, or is, or would be, unlawful for any other reason,
- then, to that extent (and only to that extent) Stunalara will not be obliged to comply with that provision of clause 6.
- (b) The parties must not make or cause to be made, any application to a court or the Takeovers Panel for or in relation to a determination referred to in this clause 6.8.

7. REIMBURSEMENT FEE

7.1 Background to Reimbursement Fee

- (a) Each party acknowledges that, if they enter into this agreement and the Takeover Bid is subsequently not implemented, the parties will incur significant costs, including those set out in clause 7.4.
- (b) In these circumstances, the parties have agreed that provision be made for the payment outlined in this clause 7, without which the parties would not have entered into this agreement or otherwise agreed to implement the Takeover Bid.
- (c) Stunalara and the Stunalara Board believe, having taken advice from its external legal adviser, that the implementation of the Takeover Bid will provide benefits to it and its shareholders, and that it is reasonable and appropriate that Stunalara agrees to the payments referred to in clause 7.2 in order to secure Inca's participation in the Takeover Bid.

7.2 Triggers for payment of Reimbursement Fee by Stunalara

Subject to clauses 7.5 and 7.7, Stunalara must pay the Reimbursement Fee to Inca without set-off or withholding, if:

- (a) during the Exclusivity Period, any one or more members of the Stunalara Board withdraws, adversely revises or adversely qualifies his or her support of the Takeover Bid or his or her recommendation that Stunalara Shareholders accept the Offer or fails to recommend that Stunalara Shareholders accept the Takeover Bid, or, having made such a recommendation, withdraws, adversely revises or adversely qualifies that recommendation for any reason other than because the Independent Expert concludes in its Independent Expert's Report that the Offer is not fair and not reasonable;
- (b) during the Exclusivity Period, any one or more members of the Stunalara Board recommends that Stunalara Shareholders accept or vote in favour of, or otherwise supports or endorses (including support by way of accepting or voting, or by way of stating an intention to accept or vote, in respect of any Stunalara Shares held or controlled by them or held on their behalf), a Competing Proposal of any kind that is announced (whether or not such proposal is stated to be subject to any pre-conditions) during the Exclusivity Period; or
- (c) Inca has terminated this agreement pursuant to clause 9.1(a), 9.1(c) or 9.2(b).

7.3 Timing of payment of Reimbursement Fee

- (a) A demand by Inca for payment of the Reimbursement Fee under clause 7.2 must:
 - (i) be in writing;
 - (ii) be made after the occurrence of the event in that clause giving rise to the right to payment;
 - (iii) state the circumstances which give rise to the demand; and
 - (iv) nominate an account into which Stunalara is to pay the Reimbursement Fee,and may only be made after the End Date and provided that Inca has not become the registered legal and beneficial holder of at least 50.1% of Stunalara Shares.
- (b) Subject to clause 7.7, Stunalara must pay the Reimbursement Fee into the account nominated by Inca, without set-off or withholding, within 21 Business Days after receiving a demand for payment where Inca is entitled under clause 7.2 to the Reimbursement Fee.

7.4 Basis of Reimbursement Fee

The amount payable by Stunalara pursuant to clause 7.2 is purely and strictly compensatory in nature and has been calculated to reimburse Inca for costs including the following:

- (a) fees for legal, financial and other professional advice in planning and implementing the Takeover Bid (excluding success fees);
- (b) reasonable opportunity costs incurred in engaging in the Takeover Bid or in not engaging in other alternative or strategic initiatives;
- (c) costs of management and directors' time in planning, considering and implementing the Takeover Bid; and

- (d) out of pocket expenses incurred by Inca's employees, advisers and agents in planning, considering and implementing the Takeover Bid,

and the parties agree that:

- (e) the costs actually incurred will be of such a nature that they cannot all be accurately ascertained; and

- (f) the amount payable is a genuine and reasonable pre-estimate of those costs,

and each party represents and warrants that it has received advice from its external legal adviser on the operation of this clause 7.

7.5 Compliance with law

This clause 7 does not impose an obligation on Stunalara to pay the Reimbursement Fee to the extent (and only to the extent) that the obligation to pay the Reimbursement Fee:

- (a) is declared by the Takeovers Panel to constitute 'unacceptable circumstances'; or

- (b) is determined to be unenforceable or unlawful by a court,

provided that, in either case, all lawful avenues of appeal and review, judicial and otherwise, have been exhausted. For the avoidance of doubt, any part of the Reimbursement Fee that would not constitute unacceptable circumstances or that is not unenforceable or unlawful (as applicable) must be paid by Stunalara. To the extent that the Reimbursement Fee has already been paid, Inca must refund the relevant portion of the Reimbursement Fee paid under this agreement within 5 Business Days of receipt of a demand for refund.

7.6 Reimbursement Fee payable only once

Where the Reimbursement Fee becomes payable to Inca under clause 7.2 and is actually paid, Inca cannot make any claim against the other party for payment of any subsequent Reimbursement Fee.

7.7 Limitation of liability

Notwithstanding any other provision of this agreement, except in relation to a wilful or intentional breach of or non-compliance with any provision of this agreement by Stunalara:

- (a) the maximum liability of a party to all other parties under or in connection with this agreement including in respect of any breach of this agreement will be the Reimbursement Fee;
- (b) a payment by a party in accordance with this clause 7 represents the sole and absolute liability of that party under or in connection with this agreement and no further damages, fees, expenses or reimbursements of any kind will be payable by that party in connection with this agreement; and
- (c) the amount of the Reimbursement Fee paid to the recipient under this clause 7 shall be reduced by the amount of any loss or damage recovered by any other party in relation to a breach of this agreement.
