1 JULY 2023 TO 30 JUNE 2024

The next 12-18 months is the realisation of the commercialisation plan.

2024/25 FIN YEAR

2025/26 FIN YEAR

* Indicative value forward-looking statements. Please see the disclaimer on slide 2.

- We have circa 60 qualified project opportunities in the pipeline and growing, coming direct and via licensees¹.
 - Multiple markets including Australia, South Africa, Middle East, SE Asia, and US
 - We will update the market as soon as purchase orders are secured
 - Ranging in size from small trial installations to large project opportunities, in multiple sectors (commercial, residential, and leisure)
- Due diligence process for potential licensees including factory visits, making samples, and educating their sales force about our products
- Long decision-making cycle²
- Quality engagement with multiple architects

¹ Direct sales enquiries and licensee project enquires. Indicative pipeline numbers are not a forward-looking statement – project opportunities are at varying degrees of completion of the sales cycle, some may not eventuate in a sale. Please see full disclaimer on slide 10.

Written by Enrique Tovar

Published on October 30, 2024

People frequently claim that finding smart solutions to problems requires a creative approach that involves thinking outside the box. This premise has become a widely accepted idea in the field of technology, where numerous historical breakthroughs have emerged from innovative methods. Prominent examples in power generation include the discovery of the photovoltaic effect by Edmund Becquerel in 1839 and the development of the first commercial solar panel by Charles Fritts later that century. These milestones have enabled the integration of solar panels as essential components of clean energy generation within architecture, driving a significant shift toward renewable energy.

This shift is currently manifesting as a tipping point between power generation and the built environment, driven by a transition that promotes creative thinking and encourages new perspectives. Today, sustainable energy production extends beyond merely installing solar panels on roofs; it aims

Chinese glass manufacturer signs on for ClearVue

Brought to you by *BIBIS N' B'ARS*

Diag Bright
November 18, 2024 – 6:36pm

In a pivotal moment for ClearVue Technologies, the solar glass developer has locked down a big Chinese manufacturer to produce and supply its unique solar windows around the globe.

The company has signed a five-year original equipment manufacturer (OEM) agreement with China-based Maxblue Industrial Glass to produce ClearVue's solar windows that are able to soak up and generate energy from the sun.

Making strong strides in solar powered glass

ClearVue Technologies (ASX: CPV) is a smart building materials technology company, that is manufacturing and commercialising its patented solar PV electricity generating glazing. ClearVue is well positioned to service a global market for solar windows and façades due to its product innovation, seamless at-scale manufacturing capability, flexible product use potential and collaborative customer partnerships.

Distinct advantages offered by ClearVue™

ClearVue™ is a first in class product with a strong IP portfolio and represents a paradigm shift in the way the glass will be used in building construction, automobiles, agriculture and specialty products. ClearVue's clear Generation II (Gen-2) is the only solar glass (with an integrated smart façade) capable of being produced at an industrial scale without any modifications to production lines meeting industry standards. In October 2023, the testing of the ClearVue™ glass technology by Singapore Building and Construction Authority (BCA) through its Skylab facility resulted in better-than-expected results with the product outperformed the comparable product (a control cell deployed with Singapore BCA's Greenmark Platinum certified double glazed low-e and energy performance.

Alan Kohler sits down with Martin Deil, the chief executive officer of ClearVue Technologies Ltd, to discuss the company's photovoltaic glass operations.

By **Alan Kohler** · 17 Jul 2024 · 5 min read

Alan Kohler here and I'm talking to Martin Deil, who is the CEO of ClearVue Technologies, which is a Perth-based company that sells photovoltaic glass that actually is transparent but also collects solar power from the sun — and they do not just the glass, but also the panels that go around the glass, so they can cover an entire building with solar panels, effectively, as part of which is glass that you can see through, so they've got patents around that. My son, Chris, did a piece on this company for Channel Nine News last week which I thought was very interesting and I thought it'd be good to talk to them because they're a listed business, they've been listed since 2018. It's been a bit of a rollercoaster, up and down, they've had high prices, low prices, currently capitalised at about \$138 million.
