

30th May 2025

dorsaVi Signs 3-year Deal with Mining Health Leader - SANO Health

Key Highlights:

- **SANO Health supports major mining clients across Australia with workplace safety solutions.**
- **dorsaVi and SANO have collaborated for 5 years on injury prevention**
- **New agreement sees dorsaVi's ViSafe+ Premium to be used by 10 SANO consultants across remote mining sites.**
- **Partnership to help shape ViSafe+ enhancements for high-risk industries like mining and transport.**
- **The product enhancements allow dorsaVi to offer risk and ergonomic solutions to a wider audience in Australia and the global mining and transport market.**

Melbourne, Australia, 30th May 2025: dorsaVi (ASX:DVL) (dorsaVi or the Company) is pleased to announce that it has signed a new three year deal with SANO Health, a leading mining health group who offers risk solutions in the occupational health space. SANO Health's knowledge and experience working in high-performance environments provides organisations with the opportunity to reduce risk of injury and improve health. SANO Health captures unique insights from front-line industry tasks and designs Injury Prevention Programs to suit specific organisations.

The new agreement is for three years, at \$30k per annum, and extends the use of dorsaVi's ViSafe+ product to 10 of Sano Health's safety consultants across different Australian sites. dorsaVi has supplied SANO Health with its medical grade wearable sensor technology to measure movement and muscle activity for their clients as they undergo their daily tasks. Using the empirical data, SANO Health will provide manual

handling risk mitigation strategies, leading to improved health, safety, and well-being for SANO's clients.

The ongoing relationship between SANO and dorsaVi allows dorsaVi to optimise the ViSafe+ technology in line with industry needs in Australia, US and Europe. dorsaVi appreciate Sano Health's deep industry knowledge, collaboration and feedback to the dorsaVi technical team, which in turn assists dorsaVi in optimising the ViSafe+ product.

The data received from the SANO Health team is from some of the most remote regions of Australia, which demands the very highest level of stability, reliability and robustness to support heavy industries like mining and transport. The product enhancements allow dorsaVi to offer risk and ergonomic solutions to a wider audience in Australia and the global mining and transport market.

Matt Hornsby, SANO Health's Chief Executive Officer, commented:

"Our team at Sano Health use the ViSafe+ technology on a daily basis to assess job tasks and provide real-time feedback and recommendations. The assessments, and subsequent recommendations, are well received by our clients due to the objectivity and specificity that the data provides. In real time, we can advance workgroup knowledge and safety whilst also collating a library of data for each job task. Across many years now, we have data showing the impact of our programs on reducing musculo-skeletal injuries. The ViSafe+ product plays an important part in these results."

This release has been authorised for lodgement by the Company's Board of Directors.

About dorsaVi

dorsaVi Ltd (ASX: DVL) is an ASX company focused on developing innovative motion analysis device technologies for use in clinical applications, elite sports, and occupational health and safety. dorsaVi believes its wearable sensor technology enables, for the first time, many aspects of detailed human movement and position to be accurately captured, quantified, and assessed outside a biomechanics lab, in both real-time and real situations for up to 24 hours. dorsaVi's focus is on two major markets:

- For personal use only
- **Workplace:** dorsaVi enables employers to assess risk of injury for employees as well as test the effectiveness of proposed changes to OHS workplace design, equipment or methods based on objective evidence. dorsaVi works either directly with major corporations, or through an insurance company's customer base with the aim of reducing workplace compensation and claims. dorsaVi has been used by major corporations including London Underground, Vinci Construction, Crown Resorts, Caterpillar (US), Boeing, Monash Health, Coles, Woolworths, Toll, Toyota, Orora, Mineral Resources and BHP Billiton.
 - **Clinical:** dorsaVi is transforming the management of patients with its clinical solutions (ViMove+) which provide objective assessment, monitoring outside the clinic and immediate biofeedback. The clinical market is broken down into physical therapy (physiotherapists), hospital in the home and elite sports. Hospital in the home refers to the remote management of patients by clinicians outside of physical therapy (i.e. for orthopaedic conditions). Elite sports refer to the management and optimisation of athletes through objective evidence for decisions on return to play, measurement of biomechanics and immediate biofeedback to enable peak performance.
