

RC Drilling Underway at Yandal West - High Priority Targets

Albion Resources Limited (ASX: ALB) is pleased to advise that **Reverse Circulation (RC) drilling is now** underway at the **Yandal West Project**, located in the highly prospective **Yandal Greenstone Belt**, Western Australia.

Figure 1: RC drill rig operating at Yandal West, testing high-priority

The RC campaign will consist of **approximately 3,000 to 4,000 metres** of drilling, targeting high-priority gold targets, including:

- **Collavilla Historical Workings** – Outcropping shallow mineralised quartz vein system with historical high-grade hits (**CRC-12 7m at 7.4 g/t Au from 32m** and **IFRC005 3m at 52.38 g/t Au from 34m**).
- **Collavilla East** – Strong chargeability anomaly extending to ~300m depth, located near the mineralised vein system, supported by encouraging rock chip assays.
- **Collavilla West** – Chargeability anomaly supported by encouraging rock chip assays.
- **Barwidgee Central** - Centred around historical intercepts from hole **23YRD023: 4m @ 9.0g/t Au from 39 m and 7m @ 1g/t Au from 23m (same hole)**, with mineralisation open at depth, and supported by anomalous surface geochemistry and geophysical targets.

These prospects offer strong discovery potential and remain underexplored despite their location in a region that hosts multiple processing plants.

Note 1 - The historical intercepts referenced have been previously reported in ALB's announcements dated 28 Nov 2024 and are not being reported as new exploration results. The results have been referenced in multiple announcements since.

Upcoming Programs: Air core and Heritage Survey at Barwidgee

A **heritage clearance survey** over the Barwidgee AC areas has been completed with the final report to be finalised in the coming two weeks, to support the next phase of drilling.

Albion will launch an **Aircore (AC) drilling program in mid to late July**, targeting the **Barwidgee Fault**, a major regional structure with limited historical drilling but strong structural and geochemical indicators of gold potential.

What's Next?

- **Heritage Clearance Barwidgee** – Early July
- **AC Drilling Commences** – Mid to late July
- **Gravity Survey** - Mid to late July
- **RC Drilling Results** – July / August

Why This Matters for Investors

This drill campaign represents a **significant opportunity** for Albion to unlock value from a high-quality, underexplored gold project in a **tier-one mining jurisdiction**. With a **tight capital structure, fully funded exploration, and multiple compelling targets**, Albion is well positioned to **deliver strong leverage to discovery success**.
