

ASX ANNOUNCEMENT  
31 July 2025

## QUARTERLY REPORT

### For the Period Ending 30 June 2025

#### HIGHLIGHTS

##### WEST MUSGRAVE COPPER PROJECT (100% RDS) – WEST MUSGRAVE, WESTERN AUSTRALIA

- During the quarter, Redstone completed its diamond drilling copper exploration programme at its 100% owned West Musgrave Copper Project in WA.
- Drilling comprised a single diamond hole (TLD005) drilled to a depth of 1,192m at the Chatsworth Prospect, with the intention of targeting deep beneath the existing high-grade Tollu Cu deposit;
  - *Drilling will test the theory that mineralisation beneath Tollu potentially represents remobilised Cu from a Voisey's Bay style high-grade magmatic massive sulphide Cu-Nickel (Ni) deposit at depth.*
- Initial geological observations from the drilling are encouraging - geochemical assay results and detailed analysis expected to be received in August with first drilling results to be reported shortly thereafter.
- Costs of the recently completed diamond drilling were considerably reduced via co-funding from the Exploration Incentive Scheme (EIS), with Redstone awarded an EIS grant (Round 29) for up to \$220,000.
- Additional heritage surveys for potential RC drilling in and around the high-grade Chatsworth and Forio Prospects and surrounding priority target areas located outside of the Tollu resource were completed during the June quarter.
- Further demonstrating the potential of this region, just 60km west of Tollu, is the world class Ni-Cu-Co deposit with Voisey's Bay characteristics – the BHP-owned Nebo-Babel – 390Mt of ore grading 0.33% Cu, 0.30% nickel, for 1.2Mt of contained Ni and 1.3Mt of contained Cu metal (see Figure 1).

##### CORPORATE – CAPITAL RAISING

- Redstone undertook a private placement to raise \$490,000 (before costs) to date.

Redstone Resources Limited (ASX: RDS) (**Redstone** or the **Company**) is pleased to provide its quarterly report for the period ending 30 June 2025 (the **Quarter**).

During the Quarter, Redstone was primarily focused on completing its diamond drilling program as well as progressing heritage surveys required for potential follow-up Reverse Circulation ('RC') drilling at its 100% owned West Musgrave Project.

### ***WESTERN AUSTRALIA: WEST MUSGRAVE COPPER PROJECT (100% RDS)***

#### **Deep Diamond Drill Hole Summary – TLD005**

The diamond drilling program commenced in late April and was successfully completed on time and on budget prior to the end of the Quarter. The single deep diamond drillhole – TLD005 - was drilled to a depth of 1,192m.

A total of 214 half core drill samples were sent to the laboratory for geochemical analysis with first assay results expected in August. Redstone is encouraged by the initial geological observations and will wait for the geochemical assay results and more detailed geological and mineralogical analysis before further reporting on the results of the drilling.

The single deep diamond drillhole follows on from Redstone's successful application for the Round 29 Exploration Incentive Scheme (EIS) co-funded drilling grant from DEMIRS, with the EIS grant for up to \$220,000 significantly reducing the direct drilling costs for this diamond hole.

In addition, Redstone has also now completed further heritage surveys for potential future RC drilling in and around the high-grade Chatsworth and Forio Prospects, which are part of Tollu, as well as potential follow-up drilling and evaluation activities of surrounding priority target areas located outside of the Tollu resource.

#### **Tollu Copper Deposit Diamond Drilling Technical Summary**

The aim of the diamond drillhole is to test deep beneath the Tollu Cu veins for evidence of a Voisey's Bay style massive Cu-Ni mineralising system. Redstone's exploration model for the drilling is that the high grade Tollu Cu veins could represent a remobilisation of Cu, preferentially leached by hydrothermal fluids from a large, massive sulphide accumulation hosted within a mafic magmatic intrusion at depth.

Redstone's technical team has formed the view that the West Musgrave region has the right geological setting for Voisey's Bay style mineralisation and drilling completed by Redstone to date, clearly demonstrates this prospectivity in the Tollu area.

Large Ni-Cu-Co (PGE ± Au) magmatic sulphide deposits tend to be hosted by a variety of mafic and ultramafic igneous rocks in layered intrusions (cf. Naldrett; 1997 and 1999). Many, but not all, are associated with areas of reactivation and partial rifting of suture zones in complexly deformed and metamorphosed Proterozoic basement rocks on the margins of Precambrian cratons (cf. Naldrett; 1997 and 1999). In light of this, the West Musgrave Region has the appropriate setting required to host major Ni-Cu-PGE deposits, being centred at the triple junction between the West Australia, Central Australia and South Australia blocks, as well as at the junction of major suture zones and lineaments. This tectonic setting is comparable to the Nain-Churchill province boundary in Canada, which in Labrador, hosts the world-class Voisey's Bay deposit.

## West Musgrave Regional Prospectivity and Voisey's Bay Similarities

Voisey's Bay is considered a 'giant' Ni-Cu deposit. Discovered in 1993-94, by the year 2000 drilling at the discovery had delineated over 130Mt of massive and disseminated ore with a large high grade massive sulphide section, known as the Ovoid, of 31.7Mt grading 2.83% Ni and 1.68% Cu (Evans-Lamswood et al, 2000). However, Voisey's Bay is relatively unique in that it is one of only a few Ni-Cu deposits that are not hosted in ultramafic rocks. The other noteworthy deposits in this mafic only 'club' include Aguablanca in SW Spain, the high-grade Cu-Ni Kalatongke in NW China and Nebo-Babel (Kang et al, 2020), situated only 60km west of Tollu in the West Musgrave of Western Australia.

**Figure 1** – Location of Redstone's West Musgrave Project and the Tollu Cu Deposit relative to the world class Nebo-Babel Cu-Ni-Co Deposit and other deposits and prospects in the area. Information for deposits and prospects from DEMIRS Minedex, Cassini Resources Ltd ASX announcement of 7 December 2015 and Redstone Resources Ltd maiden JORC 2012 resource ASX announcement of 15 June 2016.

The discovery of the world class Nebo-Babel deposit, only 60km from Tollu (see **Figure 1**), has proved that the West Musgrave's geology is highly prospective for magmatic Ni-Cu or Cu-Ni deposits. However, whilst Nebo-Babel can be considered Voisey's Bay style, its high-grade massive sulphide accumulations are insignificant on a deposit scale. This is believed to be due to the pre-emplacement structural conditions (Saumur et al, 2015) and where it is located dynamically within the conceptual magmatic intrusive system as is shown in **Figure 2**.

**Figure 2:** Conceptual model for the distribution of Voisey's Bay style Ni-Cu mineralisation within the magmatic intrusive system (modified and adapted from Naldrett, 1977).

Redstone believes that the pre-to-syn-emplacement structural setting at Tollu, may have been a good location to both focus rising magmatic intrusions and provide the pathway complexity to accumulate massive sulphide along the way. Geophysical data suggests the regional N-S Tollu Fault that hosts the Tollu Cu veins is deep seated and is cross-cut by an E-W oriented regional shear directly adjacent the Tollu copper veins (see **Figure 3**). Such a setting could have always been a zone of crustal weakness and therefore a zone of focus for sulphide bearing mafic intrusions.

Redstone's exploration has furthered the prospectivity of the Tollu area for magmatic Cu-Ni mineralisation:

- Cigar and worm shaped magnetic anomalies within 7.5km range NW of Tollu (Prospects EM5, Cigar West and East and Hiding Maggie) have been shown by drilling to be layered mafic and mafic-ultramafic intrusions, with similar gabbroic rocks to that of Nebo-Babel (refer to ASX announcements of 6 July, 2020 and 26 April, 2023);
- Visible low grade Cu sulphides of 0.03-0.06% Cu over 94m downhole at EM5 (from 66m downhole - TLC 170) prove that Cu sulphide saturation has occurred in layered mafic intrusions close to Tollu (refer to ASX announcement of 6 July, 2020);
- Significant thicknesses of disseminated pyrite intersected within the overlying volcanic related basement rocks at EM1 prove that magmatic intrusions may have had ample opportunity to incorporate and become saturated in sulphur on their ascent (refer to ASX announcements of 27 November 2017 and 27 April, 2018); and
- Concentrations of cobalt of up to 0.25% (1m from 67m downhole - TLC189), associated with the high grade Cu within the Tollu Cu veins provides some evidence that the Tollu Cu mineralisation may be secondary and derived from a mafic or mafic-ultramafic hosted sulphide source.

### **CANADA: JAMES BAY LITHIUM PROJECTS – RDS AND GLN JV (50/50)**

In October 2023, Redstone acquired 100% of the Camaro, Taiga and Hellcat Projects (the James Bay Lithium Projects) as part of a 50/50 unincorporated joint venture (JV) with ASX-listed Galan Lithium Ltd (ASX: GLN) (Galan) (see ASX announcement dated 4 October 2023).

The James Bay Lithium Projects located in the world-class James Bay Lithium Province, host to several advanced lithium projects and new lithium discoveries in Québec, Canada are located adjacent to Patriot Battery Metals' (TSXV:PMET) emerging CV8 and CV13 pegmatite discoveries.

PMET's **CV8 pegmatite** is a high-quality new hard rock lithium discovery, with grab samples averaging 4.6% Li<sub>2</sub>O, and is located only 1.4 km north of the Taiga Project, and PMET's newly-discovered CV13 pegmatite cluster is located 1.5 km north of the Camaro Project.

In late 2022, the project vendors, Infinity Stone Ventures, contracted Axiom Exploration Group (**Axiom**) to complete basic geologic reconnaissance and assess the prospectivity of the Taiga-Camaro-Hellcat properties. Axiom collected eleven (11) samples from the Taiga property, twelve (12) samples from the Camaro property and forty-seven (47) from the Hellcat Tenement. Overall, sixty-one (61) samples were classed as pegmatite. Pegmatite samples were collected from outcropping dykes ranging from 30cm to 2.5m thick.

No exploration work was completed at the James Bay Lithium Projects during the Quarter.

For personal use only

## **HANTAILS GOLD PROJECT – FARM-IN AND JOINT VENTURE AGREEMENT (RDS: 80%)**

The Company's HanTails Gold Project (**HanTails**) is a historic large scale gold mine Tailings Storage Facility located on the historic Hannans South Gold Mill site, just 15kms south of Kalgoorlie-Boulder, Western Australia. The Company has completed Stage 2 of the HanTails Farmin and Joint Venture to acquire an 80% interest in HanTails (P26/4308 and P26/4465).

No exploration work was completed at the HanTails Project during the Quarter.

## **CORPORATE**

### **Capital Raising**

During the Quarter the Company completed a private placement to sophisticated and professional investors to raise A\$490,000 (before costs) through the issue of 108,888,889 million fully paid ordinary shares in the Company at an issue price of 0.45 cents per share (**Placement Shares**). Placement participants will also receive, subject to shareholder approval, a one (1) for two (2) free attaching unlisted \$0.01 option exercisable for a period of two years from the date of issue (**Options**) (the **Placement**).

The Options to be issued to Placement participants are subject to receipt of shareholder approval at a General Meeting (EGM) of the Company to be held on 18 August 2025.

The Directors of the Company have committed to participate in the Placement for up to an additional \$45,000, which will be subject to shareholder approval under ASX Listing Rule 10.11.

The Placement Shares (excluding those to be issued to the Directors of the Company) were issued on 5 June 2025 under the Company's existing placement capacity under ASX Listing Rule 7.1A (92,537,846) and ASX Listing Rule 7.1 (16,351,049).

The Placement provides funding to continue its planned work programs to unlock the potential of its 100% owned West Musgrave Copper project in Western Australia.

### **EIS Co-Fund Grant**

During the Quarter the Company received payment from DEMIRS for the first tranche (80%) of the EIS Grant amount of \$176,000.

### **Related Party Transactions**

Payments to related parties of \$18,000 is for remuneration of directors (refer section 6 of Appendix 5B).

### **Quarterly Exploration Reporting**

In accordance with ASX Listing Rule 5.3.1 the Company confirms that there have been no material developments or changes to its exploration activities.

Approximately \$183,000 was expended on exploration and evaluation activities for the quarter, primarily on the Company's West Musgrave Project, including:

- Approximately \$129,000 on heritage surveys and annual land access fees; and
- Initial costs spent in relation to the EIS Co-funded diamond drilling program.

**ABOUT REDSTONE RESOURCES:**

Redstone Resources Limited (ASX: RDS) is a base, precious metals and a lithium company exploring its 100% owned prospective West Musgrave Project, which includes the Tollu Copper deposit, in Western Australia. The West Musgrave Project is located between BHP's Nebo Babel Deposit and Nico Resources' Wingellina Ni-Co project. Redstone continues to evaluate the HanTails Gold Project at Kalgoorlie, Western Australia for potential development in the future. Redstone has a 50/50 JV with Galan Lithium for the Taiga, Camaro, and Hellcat, located in James Bay, Québec, Canada (the James Bay Lithium Projects).

## Competent Persons Statements

### West Musgrave Project, West Musgrave, Western Australia

The information in this document that relates to exploration results for the West Musgrave Project from 2017 to date was authorised by Dr Greg Shirtliff, who is employed as a consultant to the company through Zephyr Professional Pty Ltd. Dr Shirtliff is a Member of the Australian Institute of Mining and Metallurgy and has sufficient experience of relevance to the tasks with which he is employed to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Dr Shirtliff consents to the inclusion in the report of matters based on information in the form and context in which it appears.

The information in this report that relates to Mineral Resource for the West Musgrave Project was authorised by Mr Darryl Mapleson, a Principal Geologist and full time employee of BM Geological Services, who were engaged as consultant geologists to Redstone Resources Limited. Mr Mapleson is a Fellow of the Australian Institute of Mining and Metallurgy. Mr Mapleson has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration to act as a competent person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Mapleson consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

### James Bay Joint Venture Projects (50/50 RDS and GLN)

The information contained herein that relates to exploration results and geology for the James Bay Joint Venture Projects between Redstone and Galan Lithium Ltd (ASX: GLN) is based on information compiled or reviewed by Dr Luke Milan, who has consulted to the Company. Dr Milan is a Member of the Australasian Institute of Mining and Metallurgy and has sufficient experience which is relevant to the style of mineralisation and types of deposit under consideration and to the activity which they are undertaking to qualify as a Competent Persons as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Dr Milan consents to the inclusion of his name in the matters based on the information in the form and context in which it appears.

### ASX Listing Rule Information

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements, and in the case of estimates of Mineral Resources, that all material assumptions and technical parameters underpinning the estimates in the original market announcements continue to apply and have not materially changed. The Company confirms that the form and context in which the competent persons findings have not been materially modified from the original announcement referred to in the release.

### Cautionary Note

The Company cautions that as per ASX Listing Rule 3.1 and the Compliance Update 04/23, the presence of pegmatite rock does not necessarily indicate the presence of lithium mineralisation. Laboratory chemical assays are required to determine the presence and grade of mineralisation.

### Forward-Looking Statements

This document may include forward-looking statements. Forward-looking statements include, but are not limited to, statements concerning Redstone Resources Limited's (Redstone) planned exploration programme and other statements that are not historical facts. When used in this document, the words such as "could", "plan", "estimate", "expect", "intend", "may", "potential", "should", and similar expressions are forward-looking statements. Although Redstone believes that its expectations reflected in these forward-looking statements are reasonable, such statements involve risks and uncertainties and no assurance can be given that actual results will be consistent with these forward-looking statements.

## Appendix 5B

### Mining exploration entity or oil and gas exploration entity quarterly cash flow report

## Mining exploration entity or oil and gas exploration entity quarterly cash flow report

<b>8. Estimated cash available for future operating activities</b>	<b>\$A'000</b>
8.1 Net cash from / (used in) operating activities (item 1.9)	(77)
8.2 (Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(183)
8.3 Total relevant outgoings (item 8.1 + item 8.2)	(260)
8.4 Cash and cash equivalents at quarter end (item 4.6)	818
8.5 Unused finance facilities available at quarter end (item 7.5)	-
8.6 Total available funding (item 8.4 + item 8.5)	818
8.7 <b>Estimated quarters of funding available (item 8.6 divided by item 8.3)</b>	3.1
<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: N/A	
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: N/A	
8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?	
Answer: N/A	
<i>Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.</i>	

**Compliance statement**

- This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- This statement gives a true and fair view of the matters disclosed.

Date: 31/07/2025.....

Authorised by: By the board.....  
(Name of body or officer authorising release – see note 4)

**Notes**

- This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
- If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: *Exploration for and Evaluation of Mineral Resources* and AASB 107: *Statement of Cash*

For personal use only

**Mining exploration entity or oil and gas exploration entity quarterly cash flow report**

---

*Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
