ASX Market Announcements

**AIRCORE DRILLING COMPLETED**  
**AT LAMEROO, COODALYA, AND KARTE, LIMESTONE COAST, SOUTH AUSTRALIA**

Kaili Resources Limited (“Company”) is pleased to announce that the Rare Earth Elements (“**REEs**”) Aircore drilling at the Limestone Coast Project - Lameroo EL 6856, Coodalya EL6978 and Karte EL 6977 tenements that commenced last Monday has been completed successfully during the last weekend (**Figure 1**).

54 holes (**Figure 2**) each of up to 18 metres deep have been drilled for a total of 973 metres. 973 samples have been collected for pXRF scan in the next few days to identify the presence of REEs. The samples presenting indicative high grade of mineralisation will be sent to ALS Laboratory in Adelaide for assay to confirm the grade of Total Rare Earth Oxide. Final assay results may be expected in mid-October 2025 and will be announced when received.

The 3 tenements are approximately 200 kms east of Adelaide accessible by highway and overlay the Loxton/Parilla Sands (**Figure 2**) of the region. REEs are reportedly contained within the fine clay fraction of Tertiary (65 to 2.5 Million Years Ago) Strandlines (ionic clay style of deposit) in the basin.

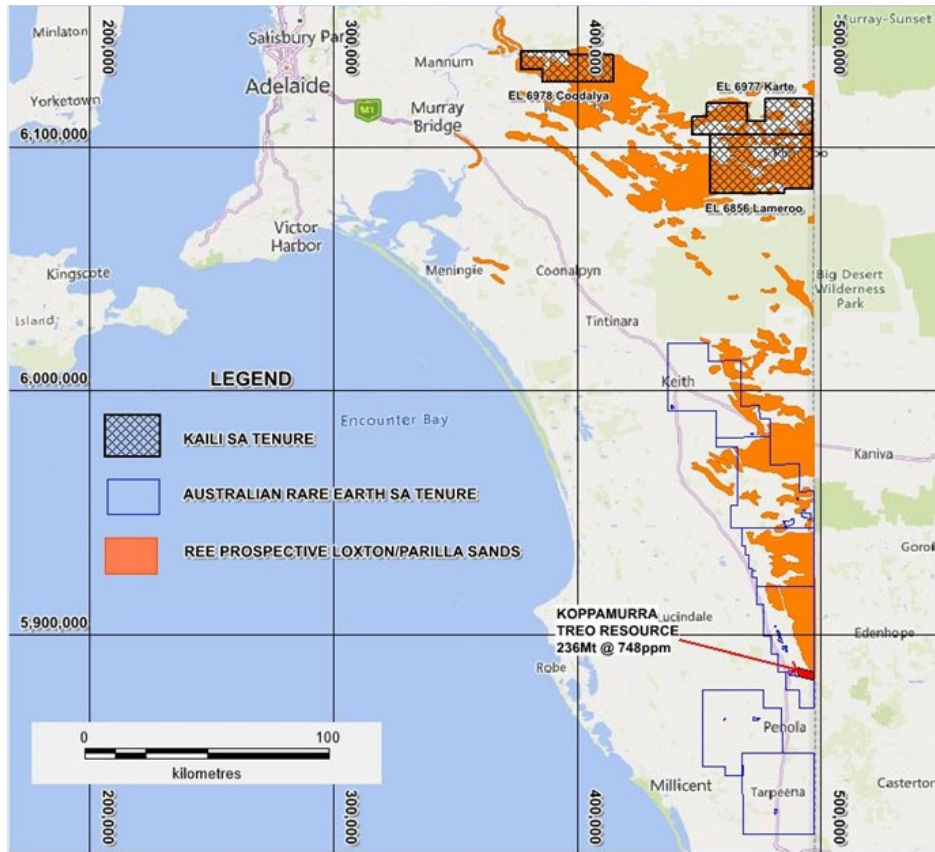

Australian Rare Earths (ASX:AR3) has reported exploration success within their tenements in the region with estimated JORC 2012 resource of 236 Mt @ 748 ppm Total Rare Earth Oxides (*see AR3 ASX Release of 30<sup>th</sup> September 2024*) and is advancing to pre-feasibility study with a \$5 million Australian Government co-funding grant.

Principal Geologist commented:

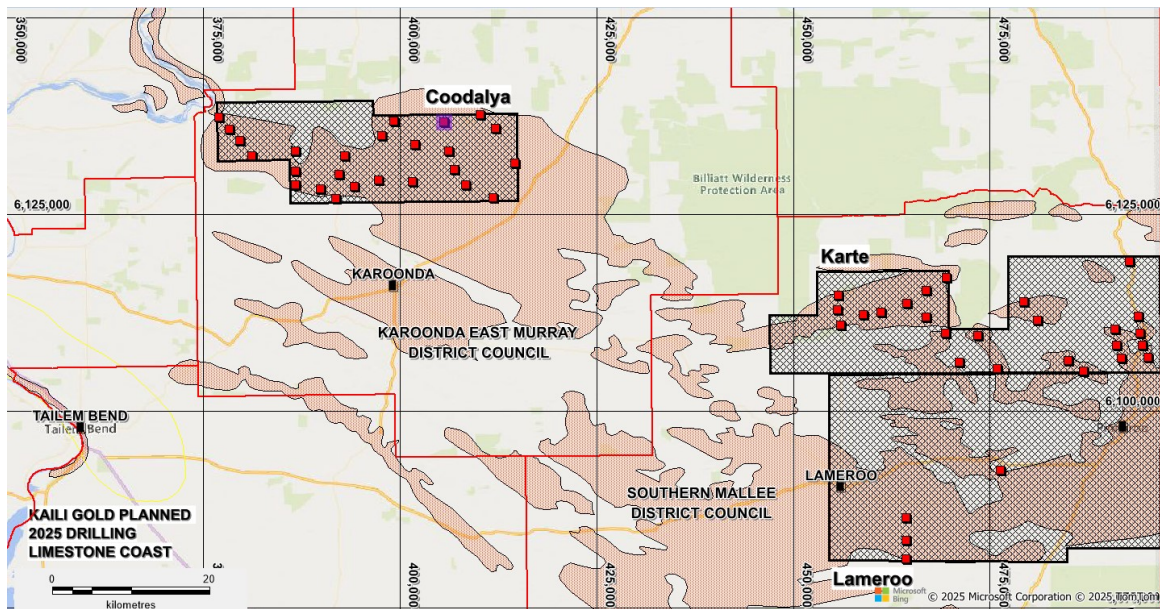

*“The drill holes are purposely widely spaced along road verges to cover large areas across the 3 tenements at low cost to direct our focus for subsequent infill drilling programs.*

*The predominantly local based crew who worked with the Company previously completed the program ahead of schedule and without incident.”*

### **Competent Person Statement**

*The information in the report above that relates to Exploration Results, Exploration Targets and Mineral Resources is based on information compiled by Mr Mark Derriman, who is the Company's Consultant Geologist and a member of The Australian Institute of Geoscientists (1566). Mr Mark Derriman has sufficient experience that is relevant to the style of mineralization and type of deposit under consideration and to the activities which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Exploration Targets, Mineral Resources and Ore Reserves. Mr Mark Derriman consents to the inclusion in this report of matters based on his information in the form and context in which it appears.*

### **Forward-Looking Statement**

*This document may include forward-looking statements. Forward-looking statements include, but are not limited to, statements concerning planned exploration program and other statements that are not historical facts. When used in this document, the words such as "could", "plan", "estimate", "expect", "intend", "may", "potential", "should" and similar expressions are forward-looking statements. Although Kaili Resources Limited believes that its expectations reflected in these forward-looking statements are reasonable, such statements involve risks and uncertainties and no assurance can be given that actual results will be consistent with these forward-looking statements.*
