

OVERSUBSCRIBED PLACEMENT CORNERED BY GOLD FUND

Haranga Resources Limited (ASX:HAR; FRA:65E0; 'Haranga' or 'the Company') is pleased to announce that it has successfully raised \$14m (before costs), via an oversubscribed two tranche placement (**Placement**). The Placement was undertaken amidst favourable macro conditions driving sustained demand for gold and allows the Company to more rapidly advance the high-grade permitted near production ready Lincoln Gold Project in California, as well as its near brownfield Ibel South Gold Project in Senegal, where high-grade intercepts demonstrate potential for a new discovery.

HIGHLIGHTS

- Oversubscribed \$14m Placement cornered by **Collins St - Gold Fund for \$2m**
- The Placement was strongly supported by existing shareholders, including SP Capital for approx. \$667k and new institutional and wholesale investors
- **Key upcoming catalysts:** +5,500m drilling, JORC resource estimation
- Funds from the placement will be aimed at **rapidly advancing the Company's 100% owned gold assets**, with key project highlights outlined in the table below:

Lincoln Gold Project, California (100%)	Ibel South Gold Project, Senegal (100%)
<p>Substantial Exploration Upside with Potential for Multi-Million Ounce Resource: Current NI 43-101 resources (non-JORC) total 286,000 oz Au at 9.3 g/t (Indicated & Inferred)¹ - (Table 1 & Schedule 1). Deposits remain open along strike and at depth (drilled to only ~150m vs. historical mines exceeding 1,000m).</p> <p>Advanced Infrastructure Provides Fast-Track to Production: Over \$90M in sunk capital underpins the Project, including 1,780m underground development, a fully equipped processing plant, underground mine infrastructure, offices and workshops¹.</p> <p>Strategic Position in Tier-1 Gold District with Pro-Mining Community Support: Haranga controls 5.8km of the richest segment of the legendary Mother Lode belt, which historically produced ~3.4 Moz of gold from included leases and ~8.4 Moz from the broader Jackson Plymouth segment¹ (Figure 1 & 2).</p> <p>High-Value Permitting Secured: The project holds a perpetual Conditional Use Permit (CUP), fully authorising mining, processing (up to 315,000 tonnes/year), and exploration drilling¹.</p> <p>Amador County's Pro-Mining Stance is a Key Differentiator: Local authorities and stakeholders have demonstrated strong support during site visits, with a history of mining integration into the community.</p>	<p>Strategic Location: Project located proximal to regional gold mines and gold occurrences (Figure 3).</p> <p>Select 1m Drill Sample Intercepts² from Aircore Drilling Confirms High Grade and Shallow Nature of Mineralisation (Table 2 & Annexure 1&2):</p> <ul style="list-style-type: none"> ○ 25-IBS-AC-008: 20m @ 6.0 g/t Au from 12m, incl. 4m @ 14.1 g/t Au ○ 25-IBS-AC-016: 12m @ 6.12 g/t Au from 42m, incl. 7m @ 10.05 g/t Au (Hole ended in mineralisation) ○ 25-IBS-AC-017: 7m @ 9.06 g/t Au from 7m ○ 25-IBS-AC-007: 5m @ 4.7 g/t Au from 5m, incl. 3m @ 7.8 g/t Au ○ 25-IBS-AC-010: 5m @ 2.16 g/t Au from 26m, incl. 2m @ 4.23 g/t Au <p>Mineralised Zone Remains Open and Key Targets Remain Undrilled: Mineralised zone open in all directions, including at depth as per hole 25-IBS-AC-016 which ended in mineralisation. Key termite mound sample anomalies remain undrilled, with weather restricting previous access.</p>

For personal use only

The Mineral Resource estimates relating to the Lincoln Gold Project contained in this announcement were prepared in accordance with Canadian National Instrument 43-101 ("NI-43-101") standards and have not been reported in accordance with the 2012 Joint Ore Reserves Committee's Australasian Code for Reporting of Mineral Resources and Ore Reserves ("JORC Code"). Refer to Haranga's website at <https://www.haranga.com/> for information in relation to the Mineral Resource estimates prepared for Lincoln. A competent person has not done sufficient work to classify the Mineral Resources in accordance with the JORC Code and it is uncertain that following evaluation and/or further exploration work that the estimate will be able to be reported as a Mineral Resource or Ore Reserve in accordance with the JORC Code. Please refer to further disclosure required by the ASX Listing Rules in the announcement referenced above at footnote 1.

Managing Director Mr. Peter Batten commented *"The Company is well positioned to capitalise on the favourable macro conditions driving sustained demand for gold, with it's permitted, near production ready, Lincoln Gold Project in California, as well as the Ibel South Gold Project in Senegal, where a recent drill program confirmed shallow and high grade gold intercepts demonstrating potential for a new discovery.*

Having two such unique gold assets, the board has made the decision to rapidly advance the Company's plans with these high-grade gold assets, by undertaking this Placement.

This funding not only allows the Company to undertake a further drill program at Ibel South and target resource drilling and estimation at Lincoln, but brings forward the Company's plans to make a potential new discovery at Ibel, advance the Lincoln decision making process through test-work and studies and consider land consolidation opportunities."

PLACEMENT DETAILS

The Placement will result in the total issue of 100,000,000 new fully paid ordinary shares at an issue price of A\$0.14 per share (**Placement Shares**), to raise a total of \$14m (before costs). The Placement was cornered for \$2m by Collins St Gold Fund (Refer below About Collins St Asset Management).

The issue price presents a:

- ~17.65% discount to the last traded price of A\$0.17;
- ~11.8% discount to the 5-day volume-weighted average price (**VWAP**) of A\$0.159;
- ~3.05% discount to the 10-day VWAP of A\$0.144; and
- ~5.24% premium to the 15-day VWAP of A\$0.133.

The Placement Shares are comprised of:

- Tranche One: To raise A\$9,800,000 by the issue of 70,000,000 new shares under the Company's LR 7.1 & LR 7.1A placement capacity; and
- Tranche Two: To raise A\$4,200,000 by the issue of 30,000,000 new shares, subject to shareholder approval at an Extraordinary General Meeting ("EGM", details to be announced).

CPS Capital Group Pty Ltd (CPS), Arq Capital Pty Ltd (ARQ) and Lodge Partners Pty Ltd (Lodge) acted as Joint Lead Managers (“JLMs”) to the Placement. In consideration for managing the Placement, the JLMs will receive a 6% Placement cash fee on funds raised, and be issued 13,000,001 options will be issued at \$0.00001 per option (**Lead Manager Options**).

About Collins St Asset Management

Collins St Asset Management is a Melbourne-based investment firm, with a value-oriented approach to equity markets. Among its specialised funds, is the **Collins St Special Situation Fund No.2**, which focuses on gold and precious metals. This fund targets late-stage exploration and early-stage production gold companies, primarily in tier-1 jurisdictions. The fund's strategy is underpinned by macroeconomic factors such as increasing industrial demand, institutional investment in gold, and central bank buying activity driven by geopolitical uncertainties. As of April 1, 2025, the fund had significantly outperformed both the VanEck Junior Gold Miners Index (GDXJ) and the Philadelphia Gold and Silver Index (XAU) since its inception.

INVESTOR RELATIONS APPOINTMENT

The Company advises that StocksDigital (SD) has been re-engaged to provide investor relations support to Haranga, and will be issued 1,785,714 shares as payment for services to be provided to the Company across an 18 month period (Shares to be issued at a deemed issue price of A\$0.14 per share). Shares issued to SD will be issued subject to shareholder approval. All shares issued to SD will be subject to voluntary hold conditions of 18 months. SD’s nominee entity also participated in the Placement.

USE OF FUNDS

The funds raised under the Placement are expected to fund the following activities:

- Immediate (current quarter) high-impact drilling at gold projects:
 - Maiden 2,500m Diamond Drill Program at Lincoln Gold Project; and
 - 3,000m follow-up Aircore Drill Program at Ibel South Gold Project;
- JORC Resource estimation;
- Underground development for next drilling phase - exploration crosscut;
- Metallurgical studies - tailings classification, industry updates to equipment;
- Land consolidation opportunities;
- Feasibility Studies; and
- Working capital and costs of the Placement.

ABOUT LINCOLN GOLD PROJECT

The Lincoln Gold Project is in Amador County, approximately 60 km southeast of Sacramento in Central California (Figure 1). It covers a strike length of the Mother Lode of approximately 5.8 km between the towns of Sutter Creek and Amador City and

consists of 47 property parcels through a combination of ownership and lease agreements for mineral and surface rights, totalling 322 hectares.

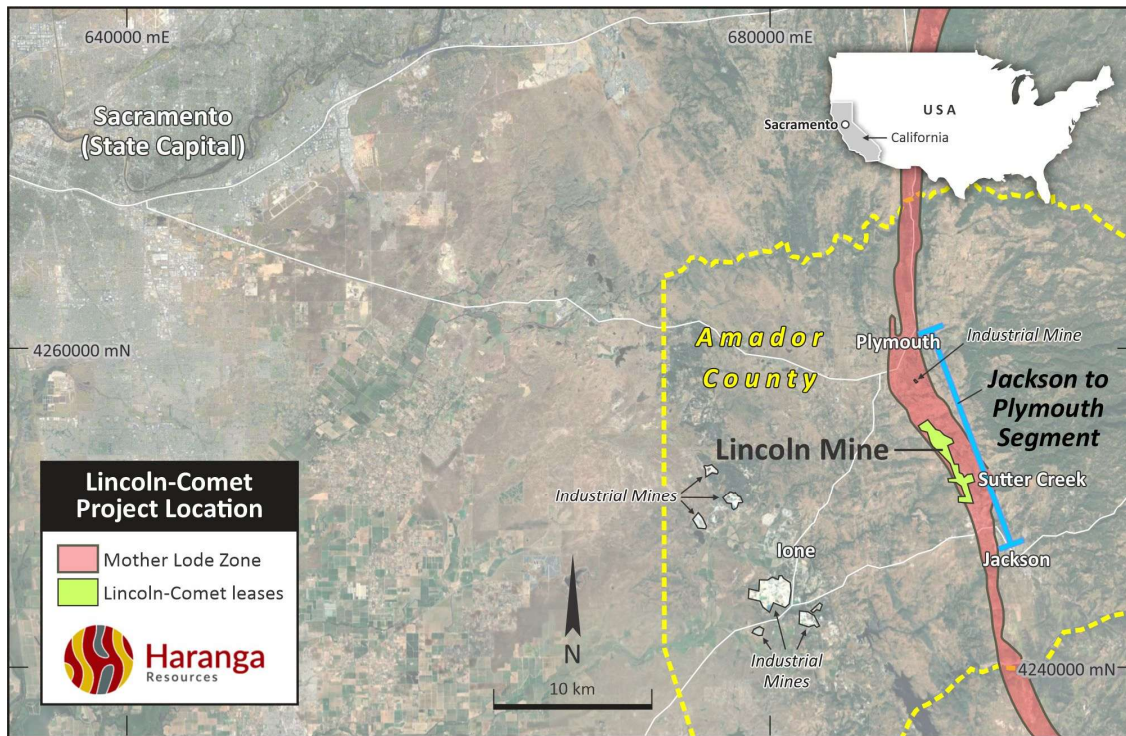

Figure 1: Project is located Southeast of Sacramento, California, USA¹. Several significant mines run by US Mine Corporation are active around lone, where Heavy Mineral Concentrate, Clay and Silica is produced from three separate operations.

The Lincoln Gold Project is located within the Jackson-Plymouth segment of the Mother Lode (Figure 1). A quarter of the gold produced from the Mother Lode came from this segment, approximately 8.4 million ounces¹. At the same time approximately 3.4 million ounces of gold was produced from the project¹ area itself (Figure 2).

The most recent mineral resource estimate was prepared in 2015 (NI 43-101 Non-JORC compliant) in which most of the deposit was classified as an Inferred resource reflecting drill hole spacing and quality control issues from some of the older drilling (Table 1). Additional surface and underground drilling has been completed since then and this data will be incorporated into future mineral resource estimates.

Deposit	Classification	Tonnage	Grade (g/t)	Ounces Au
Lincoln-Comet	Indicated	137,894	13.75	61,000
Lincoln-Comet	Inferred	459,043	8.71	128,000
Medean (Keystone)	Inferred	361,973	8.33	97,000
TOTAL	Ind/Inf	958,910	9.29	286,000

Table 1: Recent (2015), non-JORC NI 43-101 resource estimate, using a 4.2 g/t cut-off for the Lincoln Gold Project (Tietz et al., 2015)¹.

For personal use only

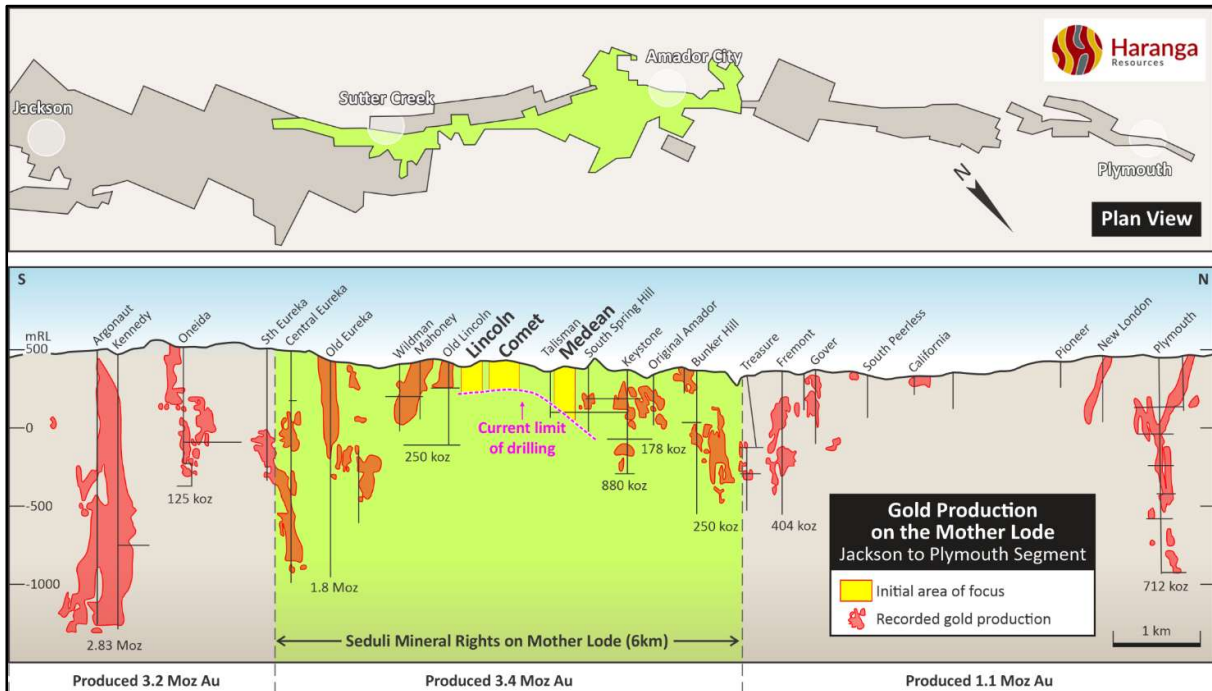

Figure 2: Long section of the Jackson-Plymouth segment of the Mother Lode with the Lincoln Gold Project area shown in the centre. The plan view shows the leased & owned mineral rights (green) forming part of the acquisition¹.

Numerous metallurgical test programs have been conducted focusing on comminution, gravity, flotation, cyanidation and tailing treatment. Testing indicated recoveries ranging from 64% to 99%, depending on the processing methods and the nature of the ore. The variance between duplicate analyses was typically high and attributed to the presence of coarse particulate gold.

Recent desktop work has included a compilation and validation of historic data, mapping of the geology over the Mother Lode and three-dimensional mapping of quartz veins and shear zones within the resource areas. There has not been any mining since the reporting of the 2015 estimate.

Permitting

The Lincoln Gold Project has been granted all three Major Permits and Approvals required to operate an underground mine, process ore and undertake exploration activities underground and on the surface.

These are:

1. Approval under the California Environmental Quality Act (CEQA). This is required before a Conditional Use Permit (land use permit) is granted. This is a Comprehensive approval covering virtually all aspects of project development, operations, reclamation, and closure.

For personal use only

2. Conditional Use Permits (CUPs). Comprehensive permit, including conditions of approval and mitigation measures required under CEQA, covering virtually all aspects of project development, operations, reclamation, and closure.
3. Waste Discharge Requirements (WDRs). The Project holds two WDR's, one for Interim land disposal of treated mine water and the other Comprehensive water quality permit for full scale operations including construction, operation, closure and post-closure monitoring and maintenance of Waste Rock Pile, Surface Fill Unit, and tailings disposal to the underground workings of Waste Piles and Expanded Mining Operations.

Operating Permits and Approvals relate to specific aspects of the project or equipment and have a lower requirement for application documentation. In many cases these can be approved in days or weeks.

Existing Infrastructure

The Lincoln Gold Project has had over \$90M¹ in sunk capital spent on the project (Photo 1), including:

- 34,771m in 336 holes (RC & diamond);
- 880m decline and 900m of level development;
- fully equipped processing plant and underground mine infrastructure; and
- office & workshop.

Photo 1: Aerial photo of the Lincoln Gold Mine infrastructure.

Planned Drilling

To undertake the drilling, Swick will mobilise a Gen II underground diamond rig from its base in Nevada, in coordination with the Company's preparations for planned drilling in

October. The diamond drilling will commence from the Stringbean Alley Decline and is planned for up to 3,000m of HQ size core using metric tooling. The drill rig is planned to operate 24/7 for the duration of the programme. The aim of this program is to convert the existing historical resource at Lincoln-Comet, to a mineral resource estimate that is compliant with JORC before the end of the year.

ABOUT IBEL SOUTH GOLD PROJECT

Ibel South is located southwest of Kedougou and is within easy access from Haranga’s Saraya camp (Figure 3). The permit covers part of the Birimian Belt that further north hosts Rolute’s (ASX: RSG) Mako Gold Mine and along strike of the lithology that further to the NNE hosts the Massawa and Sabodala Gold Mines, all in operation. Ibel South is a 100% Haranga owned permit for gold exploration.

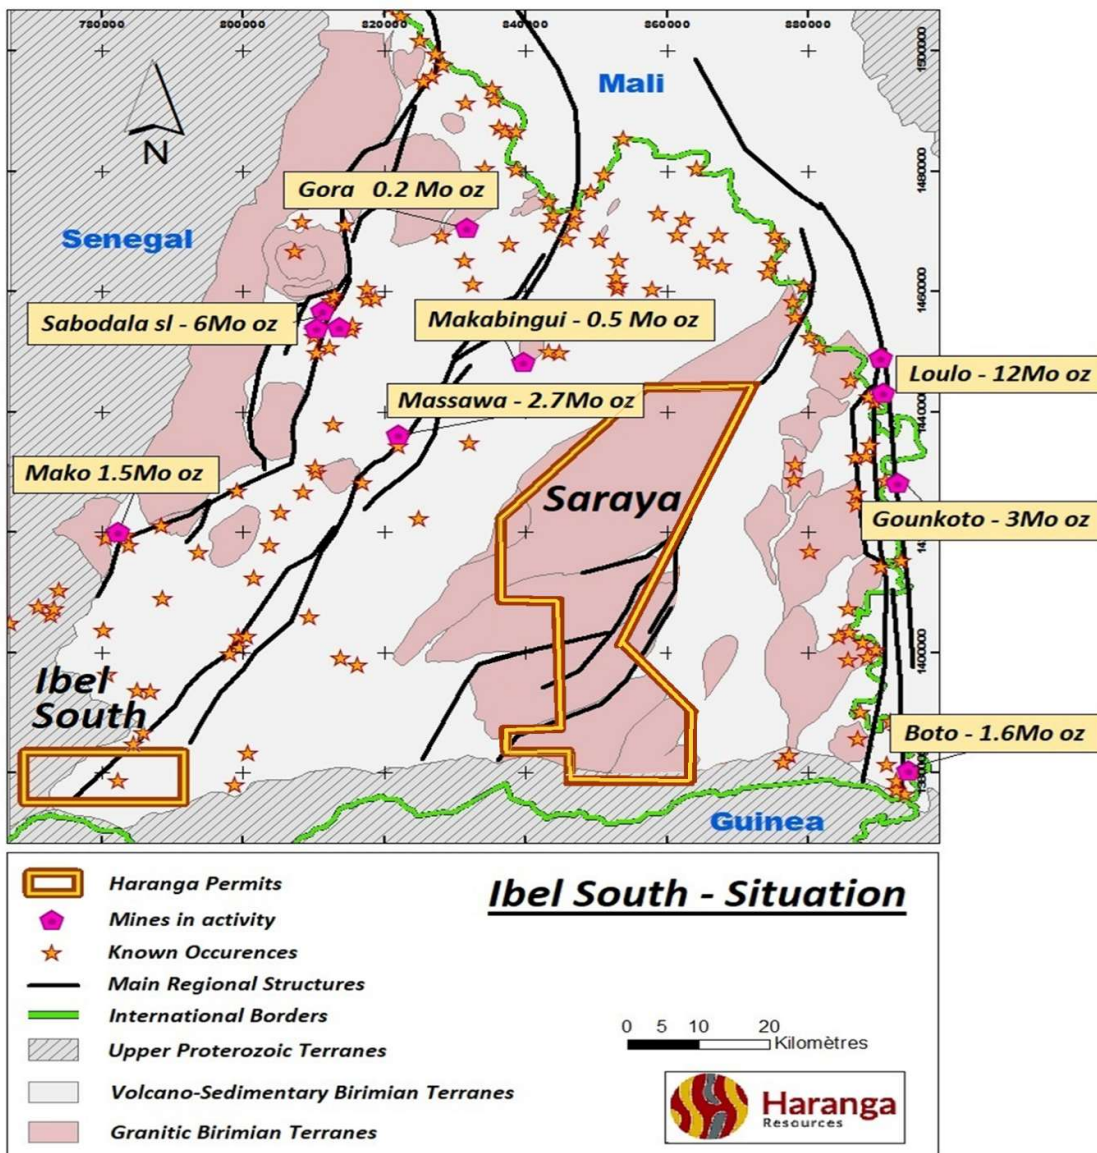

Figure 3: Ibel South Gold Project location in relation to Haranga’s Saraya Uranium³ Project and regional gold mines and gold occurrences.

For personal use only

Previous results from termite mound sampling outlined a number of zones anomalous for gold. The campaign targeted a series of gold anomalies, identified through termite mound sampling (TMS), on the elevated lateritic plateau at the Ibel South Gold Project. The drilling was designed to penetrate the blanketing laterite sheets and to test the subsurface continuity of these TMS anomalies within the weathered bedrock, particularly in zones of historic artisanal mining. Three drill lines were initially laid out across the plateau positioned to access the mapped anomalies.

Individual 1 Metre Sample Results

These results, reported here in Table 2 and more completely in Annexure 2, provide a clearer definition of the mineralised intercepts, highlight the grade variability, and indicate potential ranges.

The significant intercepts from the composite results were confirmed with matching or improved continuity and tenor from the single metre results.

Highlights include:

Hole-ID	Interval	From	Comment
25-IBS-AC-005	20m @ 0.71 g/t Au	32m	including 7m @ 1.51 g/t Au
25-IBS-AC-006	16m @ 0.47 g/t Au	12m	including 7m @ 0.78 g/t Au
25-IBS-AC-007	5m @ 4.74 g/t Au	5m	Including 3m @ 7.08 g/t Au
25-IBS-AC-008	20m @ 6.00 g/t Au	12m	including 4m @ 14.16/t Au
25-IBS-AC-010	5m @ 2.16 g/t Au	26m	including 2m @ 4.23 g/t Au
25-IBS-AC-011	2m @ 5.45 g/t Au	17m	
25-IBS-AC-011	2m @ 1.72 g/t Au	29m	
25-IBS-AC-016	12m @ 6.12 g/t Au	42m	including 7m @ 10.05 g/t Au ending in mineralisation
25-IBS-AC-017	7m @ 9.06 g/t Au	7m	
25-IBS-AC-018	7m @ 0.98 g/t Au	8m	including 2m @ 2.04 g/t Au
25-IBS-AC-018	5m @ 1.93 g/t Au	28m	
25-IBS-AC-033	1m @ 28.93 g/t Au	23m	
25-IBS-AC-034	9m @ 0.76 g/t Au	28m	including 3m @ 1.14 g/t Au

Table 2: Select intercepts from 1m assays².

The single metre assays demonstrate excellent correlation with the composites (Annexure 2), but also reveal sharper, high-grade zones, particularly in holes AC007, AC008, AC010, and AC016. These findings reinforce the prospectivity of the corridor and support further targeting of high-grade shoots along strike and at depth.

The confirmed mineralised zone remains open in all directions, including at depth as per hole AC-016 which ended in mineralisation.

Planned Drilling

Haranga is in preparation to commence the second phase of aircore drilling (~3,000m), following the end of the rainy season in late October and as soon as final community authorisations are received. The ~3,000m program will target:

- Infill drilling between known intercepts to resolve grade continuity and shoot geometry.
- Step-out drilling north and south to extend mineralised trends.
- Testing the other high-priority Termite Mound Sampling (TMS) anomalies not drilled in Phase 1 (Figure 4).

Drilling is planned at the Ibel South Gold Project over the lateritic plateau tops, devoid of Termite Mounds, making surface sampling ineffective and making drilling the most effective tool to detect blind mineralisation.

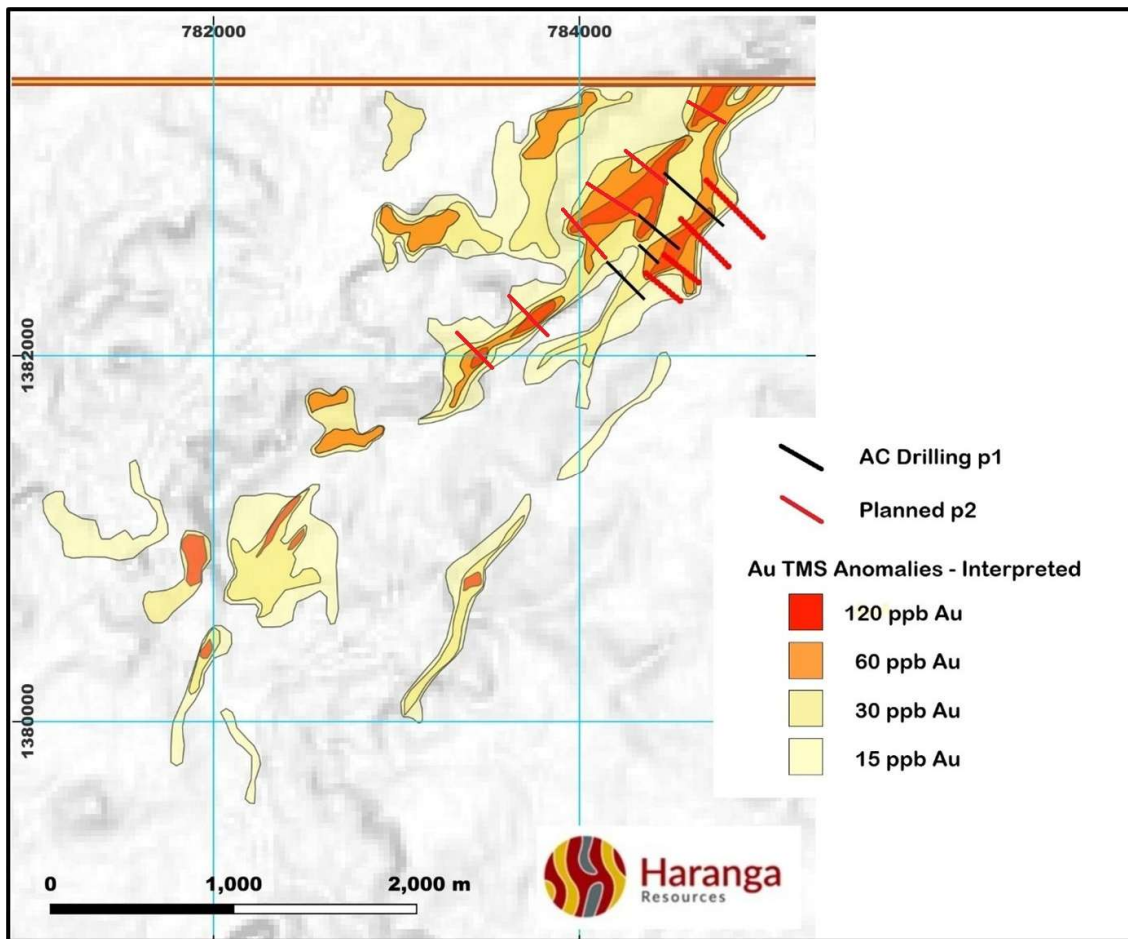

Figure 4: Proposed AC infill program at Ibel South.

The success of the Phase 1 drilling at the Ibel South Gold Project, targeting the previously ranked target priority three TMS anomaly, raises the significance of the other termite mound sample anomalies, in particular the higher tenor anomalies Priority targets 1 and 2. Even after the completion of the Phase 2 drilling program, the area over the extent of

For personal use only

the interpreted termite mound gold anomalies along the Ibel Plateau will not have been exhaustively tested, with numerous targets to drill in the later phases of exploration at the Ibel South Gold Project.

This ASX Announcement has been authorised for release by the Board of Haranga Resources Limited.

Kyla Garic

Company Secretary

HARANGA RESOURCES LIMITED

Competent Person's and Compliance Statement

The information in this announcement that relates to Exploration Results is based on and fairly represents information and supporting documentation compiled by Mr Peter Batten, a Competent Person, who is a Member of The Australasian Institute of Mining and Metallurgy (MAusIMM). Mr Batten has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Batten is the Managing Director of Haranga Resources Limited and consents to the inclusion in this announcement of the Exploration Results in the form and context in which they appear.

The information in this announcement that are footnoted below (1-3) relates to exploration results and mineral resources that have been released previously on the ASX. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and that, in the case of mineral resources estimates (including foreign estimates), all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's finding is presented have not been materially modified from the original market announcements.

Saraya - Mineral Resource³

The Company confirms it is not aware of any new information or data that materially affects the information included in the Mineral Resource estimate and all material assumptions and technical parameters underpinning the estimate continue to apply and have not materially changed when referring to its resource announcement made on 24 August 2024³. The Company confirms that the form and context in which the Competent Person's finding is presented have not been materially modified from the original market announcements.

Saraya - Mineral Resource Estimate

The resource as reported at 27 August 2024 is as follows:

For personal use only

Classification	Tonnage	Grade	Contained eU ₃ O ₈	
	Mt	eU ₃ O ₈ ppm	Mlbs	Tonnes
Indicated	4.1	740	6.7	3,038
Inferred	10.4	475	10.9	4,946
Total	14.5	550	17.6	7,984

Table 1: Saraya Mineral Resource Estimate¹ - 250ppm cutoff, Indicator Kriging

circumstances after the date hereof, or to reflect the occurrence of or non-occurrence of any events.

About Haranga Resources

Haranga Resources is a multi-commodity company focused on Gold and Uranium. The Company's most advanced project is the Saraya Uranium Project in Senegal, previously owned by Uranium giant Orano (previously Areva) and which has in excess of 65,000m of historical drilling and a defined mineral resource of 14.5Mt @ 550ppm eU₃O₈ for 17.6 Mlbs contained eU₃O₈ Indicated and Inferred. In addition, Haranga has a near brownfield gold project in Senegal within a prolific geological gold province in close proximity to well-defined resources and producing mines. Both projects are serviced from its 40-man exploration camp.

The Company has recently finalised the acquisition of the advanced high grade Lincoln Gold Project in California², which has significant infrastructure and is fully permitted for mining. The Company is currently making significant steps on site towards accessing the String Bean Alley Decline for our initial underground diamond drilling programme, intended to assist in the delivery of a maiden JORC resource for the Project.

Haranga's collective expertise includes considerable experience running ASX-listed companies and financing, operating and developing mining and exploration projects in Africa, Australia, and other parts of the world.

Schedule 1 - Lincoln Gold Project¹ - Foreign Estimate Disclosures

The NI 43-101 Mineral Resources for the Lincoln Gold Project, as at 2 July 2015, are estimated at 958,910 tonnes at 9.29g/t Au for 286,000 ounces of gold.

The information in this announcement relating to the Lincoln Gold Project Mineral Resources is reported in accordance with the requirements applying to foreign estimates in the ASX Listing Rules and, as such, are not reported in accordance with the JORC Code.

A Competent Person has not yet completed sufficient work to classify the NI 43-101 Mineral Resources as JORC Code Mineral Resources in accordance with the JORC Code 2012.

It is uncertain that following evaluation and/or further exploration work that the NI 43-101 Mineral Resources will be able to be reported as Mineral Resources or Ore Reserves in accordance with the JORC Code.

The information in this announcement that relates to the NI 43-101 Mineral Resources and of the Lincoln Gold Project has been extracted from the unpublished report entitled "Updated Technical Report on the Lincoln Mine Project, Amador County, California, prepared for Sutter Gold Mining Inc" dated 2 July 2015 (the "Report"), which sets out the Mineral Resources of the Lincoln Gold Project as at 2 July 2015.

The Mineral Resource estimates for the Lincoln Gold Project have been prepared using the National Instrument 43-101 - Standards of Disclosure for Mineral Projects of the Canadian Securities Administrators (the "Canadian NI 43-101 Standards").

The Mineral Resources estimates for the Lincoln Gold Project are not, and do not purport to be, compliant with the JORC Code and are therefore classified as “foreign estimates” under the ASX Listing Rules.
