Gold mineralisation at BMT3 is hosted in a diorite emplaced between volcanic and sedimentary rocks and is characterised by disseminated pyrite with quartz veinlets and quartz veins, occasional visible gold and associated with silica, carbonate and chlorite alteration. True widths for these shallow gold intercepts are estimated at about 60% - 80% of reported downhole lengths.

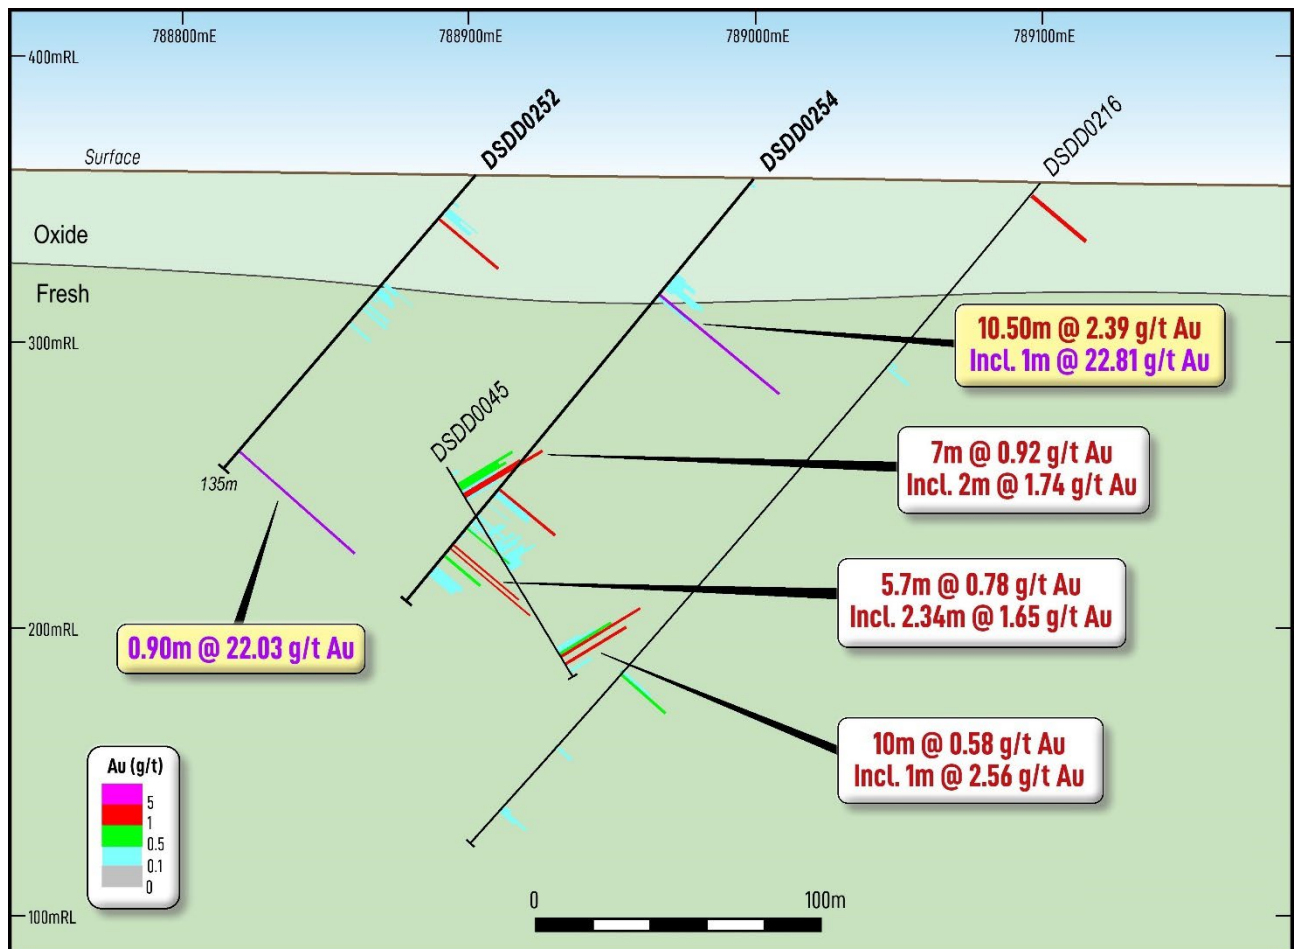

Figure 7: Cross Section looking north (+/-25m) showing new drill results (yellow) for BDT2

The BDT2 gold deposit lies within an underexplored 13km by 3km mineralised corridor. Gold mineralisation is hosted in a thick, north-south trending sandstone unit, positioned between hanging wall and footwall volcano-sedimentary rocks. The gold which is free milling is associated with fine disseminated pyrite and an alteration assemblage of hematite, silica, chlorite, tourmaline, quartz veinlets, albite, and carbonate. True widths for these shallow, wide gold intercepts are estimated at about 65% - 80% of reported downhole lengths.

Gold mineralisation remains open along strike and at depth on all deposits with drilling ongoing and Aurum planning further work.

Napié Gold Project, Côte d'Ivoire

In September, Aurum reported high-grade gold intercepts from step-back diamond drilling at its Tchaga deposit (0.54Moz @ 1.16 g/t Au), part of the 0.87Moz Napié Gold Project in Côte d'Ivoire. These results are part of a 30,000m drilling program at Napié. The Company aims to deliver the project's first resource update in early Q1 2026.

Assay results from Aurum's first two diamond holes (totalling 698.80m) drilled at the Tchaga deposit (2.3km) have successfully extended the known limits of gold mineralisation at depth⁴. These holes are the first from a 30,000m drilling program, with intercepts including:

- **2.60m @ 6.48 g/t Au** from 93m inc. **1.40m @ 11.74 g/t Au** (NADD053)
- **17m @ 9.38 g/t Au** from 236m inc. **3m @ 49.46 g/t Au** inc. **1m @ 143.58 g/t Au** (NADD053)

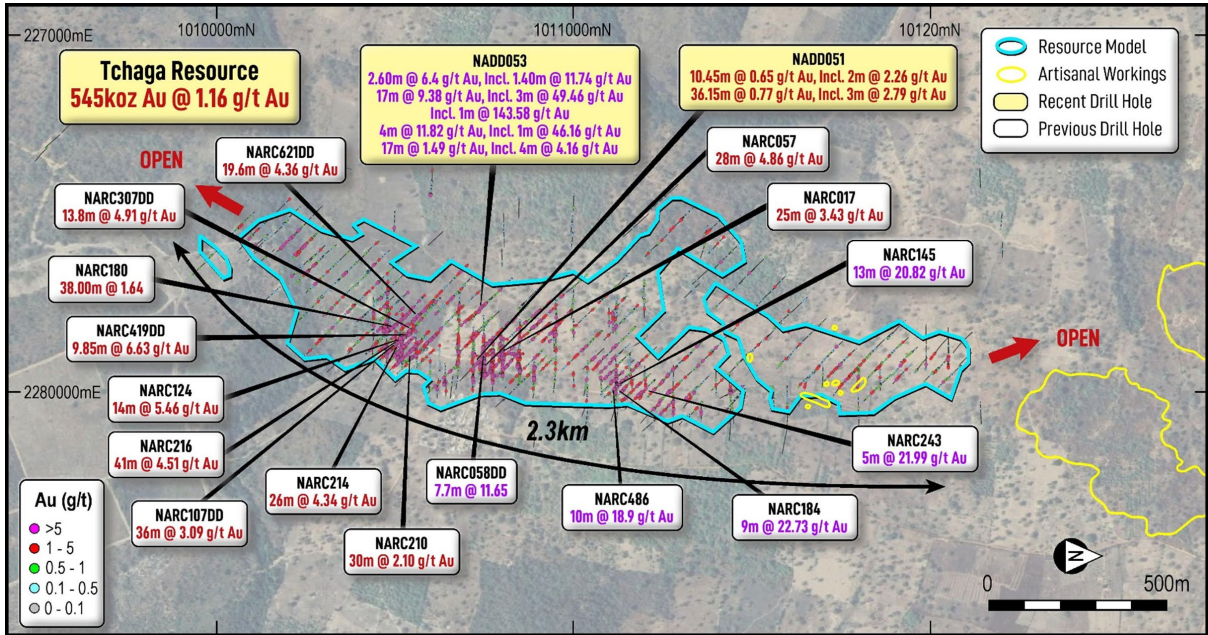

Figure 10: Plan view showing new drilling results (yellow) at Tchaga

The Napié Project is located within the Lower Proterozoic Birimian Daloa greenstone belt in Côte d'Ivoire. The style of mineralisation sought is structurally controlled orogenic gold, within an interpreted shear zone related to a regional-scale shear and secondary splays.

Napié's Tchaga and Gogbala deposits are located along a 23km long +40ppb gold soil/auger anomaly coincident with a +30km long shear zone, interpreted to be a major control for gold mineralisation. Gold mineralisation is hosted in en-echelon quartz veins and stringers and the surrounding silicified, sericite, iron-carbonate, pyrite (+/- galena and chalcopyrite) alteration halo. Mineralisation is present in all lithologies (felsic to mafic volcanoclastics, volcanic breccias and conglomerates and to a lesser extent in felsic and mafic intrusives).

Initial results demonstrated the emerging potential and continued upside of the Napié gold project, with gold mineralisation remaining open along strike and at depth (over 93% of the MRE is shallower than 150m).

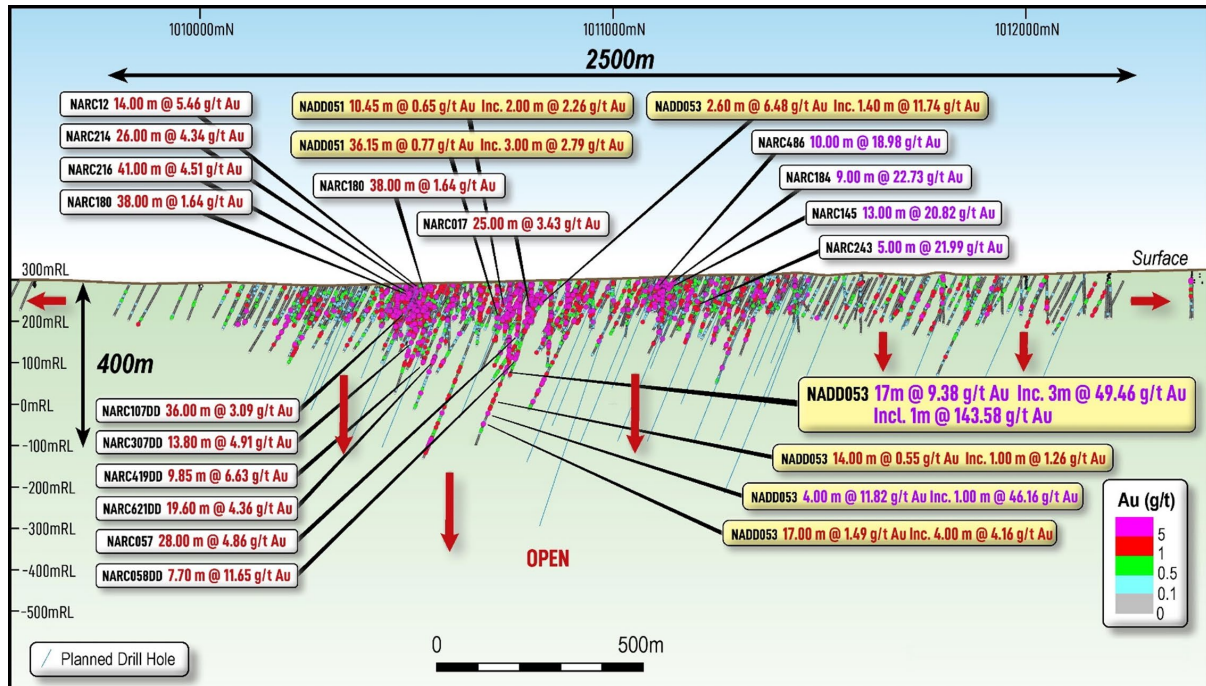

Figure 11: Long Section (looking west) showing new drilling results (yellow) at Tchaga

Drilling is ongoing at Tchaga with more assays pending and further results expected through CY2025. True widths for these shallow, wide gold intercepts are estimated at about 65% - 80% of reported downhole lengths. Two of Aurum's self-owned diamond rigs continue to drill at Napié.

Next Steps:

- **Aggressive cost-effective exploration at Boundiali:** Aurum is committed to a large-scale exploration program at Boundiali. This includes:
 - o **100,000m diamond drilling⁵:** Up to 10 diamond drill rigs will complete 100,000m of drilling at Boundiali in CY2025. The program aims to:
 - Increase the size and confidence of current resources
 - Advance known prospects for incorporation into the next MRE update
 - Target new prospects identified through soil anomalies and geological mapping to drive resource growth into 2026.
 - o **Resource expansion:** Drilling aims to expand the known resources at the BD, BM, and BST deposits.
 - o **New discoveries:** Exploration and scout drilling is planned on BD, BM, and BST tenements to test new targets and create a pipeline of new discoveries to flow into resource growth.

⁵ This program is indicative only and subject to change based on operational requirements and exploration results. Meterage allocations may be adjusted as new information becomes available.
