 - 7.65 metres @ 4.99 g/t gold from 389.41 metres in JPRCD0025
 - A second phase of drilling commenced at Jims during the quarter. This new phase of RCD drilling totals 9-holes and is designed to further test the northern and down-dip extensions to Jims and Jims Central. By quarters end 2,928 metres had been drilled.
 - Drilling was completed on a 27-hole Reverse Circulation Pre-Collar / Diamond Core Tail program at the southern edge of Groundrush to improve confidence in the Mineral Resource in the targeted area. Results will be reported to the ASX once they are available.
 - Drilling was completed on a 24-hole Reverse Circulation Pre-Collar / Diamond Core Tail program that was designed to further examine the down-dip and northern strike extension of mineralisation associated with the Western Dolerite. Results will be reported to the ASX once they are available.
 - Drilling activities recommenced at Defa during the quarter on the six-hole RC program that commenced during the 2024 field season. The final 5-holes were drilled during the quarter for an advance of 1,012 metres. Results are pending for all holes
 - Mount Gibson Iron Limited announced on the 17 July 2025 that it had entered into an agreement to acquire Northern Star's 50% interest in the Central Tanami Project Joint Venture, along with adjacent 100%-owned exploration tenure for a cash consideration of A\$50 million.

DRILLING

Jims Gold Mine

Final assay results were received during the quarter from the 18-hole Reverse Circulation Pre-Collar/Diamond Core Tail (RCD) drilling program completed at Jims Gold Mine (Jims).

The program was designed to assess the down-dip and northerly extensions of the Jims Main zone, building on the successful 2024 drilling campaign that delivered several significant intercepts, including the outstanding result of 3.80 metres @ 268.34 g/t gold (refer ASX announcement dated 4 February 2025 - Drilling Yields High Grade Intercepts from the Historic Jims Gold Mine).

Results from the pre-collar phase were reported to the ASX on 25 July 2025 – First Results Received for New Drilling at Jims Gold Mine (ASX:TAM) the results from the diamond tail phase were reported to the ASX on 1 October 2025 – Further Encouraging Drill Intercepts Received from Jims (ASX:TAM).

Figure 2: Drillhole Collar Plan at Jims

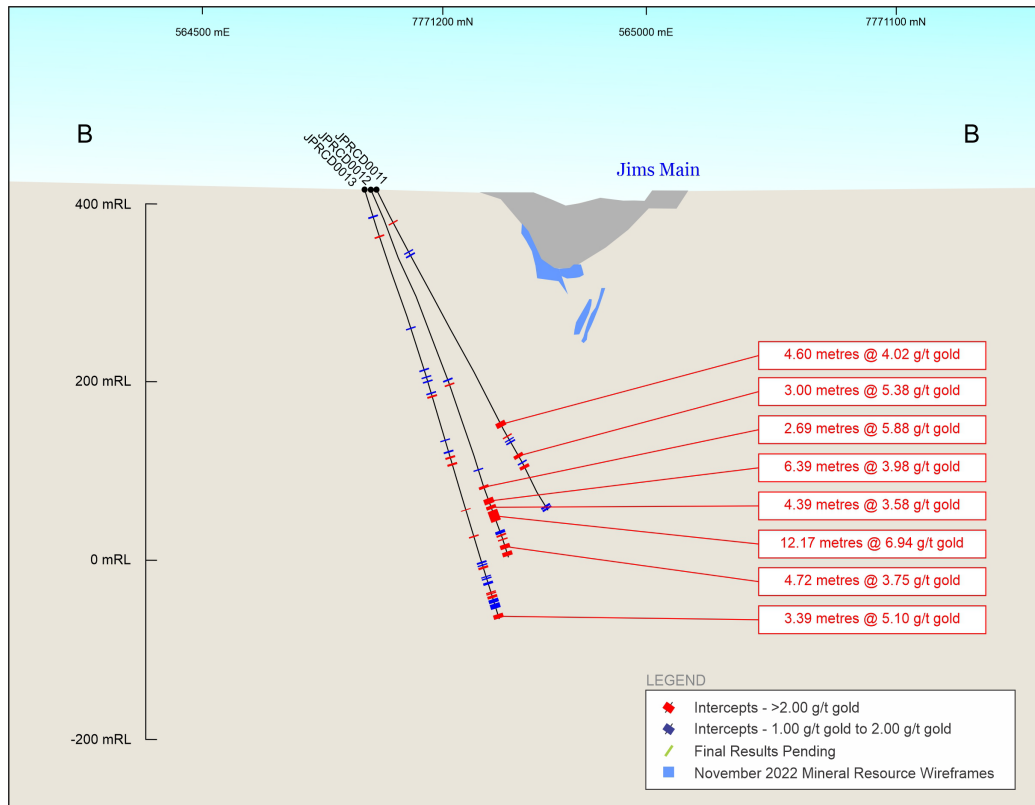

Figure 5 – Cross Section BB

A second phase of drilling commenced at Jims during the quarter. This new phase of RCD drilling totals 9-holes and is designed to further test the northern and down-dip extensions to Jims and Jims Central. By quarters end 2,928 metres had been drilled. The program is expected to be completed in the December quarter, with assay results anticipated in early 2026.

Jims is situated on Mineral Lease (Southern) MLS168, approximately 23 kilometres southwest of the Central Tanami Mill site. Mining at Jims was previously carried out during the mid-1990's, with open pits established over the Main and Central deposits. These deposits are associated with a north-northwest trending regional fault, with mineralisation hosted within a series of quartz vein breccia lodes along a major structure situated at the contact between basalt and sediment units.

Groundrush

During the quarter drilling was completed on a 27-hole RCD program at the southern edge of the Groundrush deposit. This program was undertaken over 9 profiles on a 25m x 25m base to improve confidence in the Mineral Resource in the targeted area. Results will be reported to the ASX once they are available.

Groundrush is located on Mineral Lease ML22934 approximately 45km northeast of the Central Tanami Mill site. It was subject to open-pit mining activities between 2001 and 2005, yielding 611,000 ounces of gold at a reconciled grade of 4.0 g/t gold.

The Groundrush deposit embodies a reverse fault orogenic system. Mineralisation has been delineated over a cumulative strike length of 1900 metres and is typically hosted within stacked vein sets of various orientations and sub-vertical quartz-filled shear zones, found within a fractionated dolerite sill. Minor mineralisation extends into turbiditic sediments. Alongside the diverse orientations of veining, various types like shear, extensional and a shear-extension hybrid style of veining exist.

Western Dolerite

Drilling was completed on a 24-hole RCD program that was designed to further examine the down-dip and northern strike extension of mineralisation associated with the Western Dolerite.

Results are pending from all holes and will be reported to the ASX once they are available.

The Western Dolerite Prospect is located west of Groundrush at the southern end of the historic open pit on Mineral Lease ML22934. The Western Dolerite is a relatively well-defined dolerite unit that shares many geological similarities with the nearby Groundrush Dolerite.

Defa

Drilling activities recommenced at Defa during the quarter on the six-hole Reverse Circulation (**RC**) program that commenced during the 2024 field season. The final five holes of this program were drilled during the quarter for an advance of 1,012 metres. Results are pending and will be reported to the ASX once they are available.

Defa is located in the Tanami Mine Corridor, approximately 10km southwest of the Central Tanami Mill on Mineral Lease MLS167. The area, which had previously been explored with widely spaced Rotary Air Blast (“RAB”) drilling exhibited scattered anomalous gold values that warranted further investigation.

Mineralisation predominantly occurs as gold in sulphides (pyrite, arsenopyrite, and pyrrhotite), and is hosted within quartz veins within weakly deformed basalt and medium- to coarse-grained clastic sediments of the Mount Charles Formation.

Mineral Resources

Updating the CTPJV Mineral Resource estimates continued during the quarter. These updates are part of a transition to comply with the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (**the JORC Code**). They are being compiled by MoJoe Mining Pty Ltd (**MJM**) using revised geological models that more accurately reflect the mineralised systems. The Mineral Resources will be stringently constrained by Whittle and Stope Optimisations with deposit specific cut-off grades.

Heritage & Environment

- Received extension of Sacred Site Clearance Certificate (SSCC) C2020-2014 until 31/12/2025 on 13/08/2025. This SSCC covers works in the Tanami corridor (primarily for additional Jims drilling).
- Lodged new SSCC application (C2025-XXXX) with the CLC on 19/09/2025 – pending approval. This SSCC covers the proposed 2026 work program over the CTP JV tenure.
- CLC Liaison Committee Meeting planned for early November.
