

## Stakk expands scope of deliverables with T-Mobile USA (NASDAQ:TMUS), to include Fraud and Risk services for T-Mobile Money™ within T-Mobile's Super App

- A simple, and straightforward expansion of our key deliverables for the **T-Mobile Money™ solution**, embedded in the **T-Life™ Super App**, available to **132.8 million subscribers**.
- Expanded scope of services to include **Risk IQ and Auth IQ – both modules within the Stakk IQ Embedded Finance offering**.
- This is expected to drive **increased transaction-based activity** across the Stakk platform and therefore likely to have a **material impact on the anticipated revenue trajectory** of the relationship.
- Signals a successful implementation and launch of a critical Stakk partner, and the early benefits from joint collaboration with **T-Mobile™, their sponsor bank Coastal Community, as well as other critical vendors in the ecosystem**.

Sydney, 25 November - **Stakk Limited (ASX:SKK)** is pleased to announce a notable expansion of its relationship with T-Mobile Money™, the digital banking solution offered by **T-Mobile USA, Inc. (NASDAQ:TMUS)**.

Today's announcement marks an unexpected and significant increase in Stakk's role within one of the largest consumer ecosystems in the United States, and follows Stakk's 30 September 2025 announcement of its three-year agreement with **T-Mobile™**.

Stakk's initial deployment – covering image capture, image authentication, OCR and document orchestration – is now live inside **T-Mobile Money™** and the **T-Life™ Super App**, reaching 132.8 million subscribers. Revenue began immediately with implementation fees in September and moved to recurring platform and transaction-based revenue following soft launch in early October and full production release later that month.

T-Mobile™, together with its issuing bank Coastal Community Bank, have worked collaboratively with Stakk to expand Stakk's remit to now include Risk IQ and Auth IQ, two of Stakk's core real-time fraud, risk and authentication systems. These tools enable national-scale detection of first-party and third-party fraud, dynamic risk scoring using multiple data sources, and real-time transaction decisioning as related to check deposits.

For personal use only

This expansion moves Stakk from a document orchestration vendor to an embedded component of the fraud prevention, risk intelligence, and transaction security infrastructure for the T-Mobile Money program.

The expanded scope is expected to drive increased transaction-based activity across our platform and therefore materially enhancing the anticipated revenue trajectory of the relationship.

This announcement has been approved for release on the ASX by the Board of Directors.
