AERIS SECURES THREE YEAR AGREEMENT WITH NEARMAP TO ACCELERATE INSURANCE SECTOR GROWTH

Data integration partnership positions Aeeris as critical infrastructure provider as severe weather losses surge

Aeeris Ltd (“Aeeris” or “the **Company**”) is pleased to announce that it has entered into a three-year data integration collaboration with Nearmap Australia Pty Ltd, Australia’s leading aerial imagery and location intelligence provider, through its wholly owned subsidiary, Early Warning Network Pty Ltd (**EWN**).

Under the agreement, Aeeris’ damaging wind polygons and tropical cyclone track maps will feed directly into Nearmap’s ImpactResponse System. This integration enables Nearmap’s aerial survey teams to deploy with greater speed and precision following a cyclone event, providing insurers with targeted, high-resolution damage assessment imagery. It also strengthens insurers’ pre-and post-event planning and operations, improving decision-making in the days leading up to an event and immediately after.

The partnership addresses a critical industry pain point: rapid damage assessment, which insurers consistently identify as the most challenging stage of the claims process following catastrophic events.

Aeeris Chief Operating Officer, James Harris, said: "With severe weather losses escalating each year, insurers are prioritising solutions that accelerate damage assessment and improve claims outcomes. This partnership positions Aeeris as an important part of that workflow, with a proven partner that shares our commitment to innovation."

The partnership complements Aeeris's existing insurance sector relationships and creates opportunities for additional data integration agreements as market demand for rapid pre-and post-event intelligence intensifies.
