

Company announcement

Release date 3 December 2025

Manufacturing of Phoslock to recommence

Phoslock Environmental Technologies Limited (ASX: PET) is pleased to announce it will be recommencing the manufacture of Phoslock.

The Board of Directors has decided to restart production at the factory in Changxing, China.

Production had previously stopped in 2021 due to a collapse in the China business, which led to a significant increase in inventory levels. Over the following years, inventory has been reduced thanks to continued sales. With this year's increased deliveries to our key markets, inventory levels are now much lower and need to be replenished.

In preparation for this decision to resume production, over the past six months, we have undertaken refurbishment work on the plant and equipment to ensure the manufacturing facility is ready to recommence operation. As a result, we anticipate that production will resume in January 2026.

Initially, the plant will operate on a single shift, with an expected annual production capacity of approximately 3,000 tons. If necessary, the plant can be switched to two shifts to increase production.

This announcement has been approved by the Chairman.

Mr Fred Bart
Chairman

About PET. Phoslock Environmental Technologies Limited (ASX: PET) specialises in water treatment products to remediate polluted lakes, rivers, canals and drinking water reservoirs. PET is headquartered in Sydney, has an office and factory in Changxing, China and employees in Europe and the USA. The Company is represented by licensees, distributors and agents in numerous countries including HydroScience in Brazil and the Orion Companies in the USA. PET's main manufactured product is Phoslock[®], a lanthanum modified bentonite (LMB) that permanently binds excess phosphorus in the water column and sediments and thus prevents the formation of cyanobacteria. Phoslock is certified for use in drinking water in North America, Europe, Brazil, Australia, and China.
