

12 January 2026

## Completion of Highly Successful Drill Program at Pine Ridge Uranium Project in Wyoming

### Highlights

- Final 2025 program drill results continue to highlight multiple zones of mineralisation at the Pine Ridge Uranium Project in the Powder River Basin, Wyoming.
- Highly successful drill program was completed with 114 holes and 38,000m (125,000 ft).
- Drilling results have continued to define roll front mineralisation and have increased the number of mineralised horizons. New results include:
  - 1.2m at 0.040% (400 ppm)  $U_3O_8$  from 173.7m in PR25-103 and:
    - 0.8m at 0.045% (450 ppm)  $U_3O_8$  from 176.0m
  - 0.9m at 0.041% (410 ppm)  $U_3O_8$  from 194.2m in PR25-102 and:
    - 1.1m at 0.029% (290 ppm)  $U_3O_8$  from 196.3m
  - 1.2m at 0.032% (320 ppm)  $U_3O_8$  from 254.7 in PR25-105
  - 1.4m at 0.026% (260 ppm)  $U_3O_8$  from 257.6m in PR25-106
- Best results from the drill program include:
  - 2.6m at 0.101% (1,010 ppm)  $U_3O_8$  from 257.6m in PR25-093 including
    - 2.0m at 0.124% (1,240 ppm)  $U_3O_8$  at 257.9m
  - 2.0m at 0.092% (920 ppm)  $U_3O_8$  from 314.8m in PR25-017, including
    - 1.2m at 0.132% (1,320 ppm)  $U_3O_8$  from 315.0m
  - 3.5m at 0.054% (540 ppm)  $U_3O_8$  from 321.3m in PR25-031, including
    - 1.1m at 0.078% (780 ppm)  $U_3O_8$  from 321.4m

**Global Uranium and Enrichment Limited** (ASX: GUE, OTCQB: GUEL, Global Uranium, GUE or the Company) is pleased to announce that Powder River Basin LLC (Powder River) — a 50/50 joint venture between Global Uranium and Snow Lake Energy (NASDAQ: LITM), has announced another 21 holes (total of 114 holes) on the Company's flagship Pine Ridge Project in Wyoming's Powder River Basin. This successful drill program confirmed the presence of widespread uranium mineralisation while testing only a small percentage of the large area of mineral holdings on the Project. Nonetheless it established the continuity of mineralisation in multiple areas and identified at least 25 mineralised roll fronts contained within three major sandstone packages.

**Global Uranium's Managing Director, Mr. Andrew Ferrier said:**

*"We are pleased to have successfully completed this extensive drill program at the Pine Ridge Project consisting of 114 holes and 38,000m. The results were encouraging, confirming the presence of uranium mineralisation within the targeted area and provide justification for further assessment. The team will be analysing all the results in preparation of the next drill program."*

### Drill Program

The latest results from the Pine Ridge Uranium Project drill program further illustrate the continuous nature of the stacked roll fronts noted in previous press releases. The mineralisation is hosted in at least two major sandstone units within the Tertiary Ft. Union Formation in the eastern and southwestern portions of the Pine Ridge Project. The units, generally 200m to 300m deep and 335m to 400m deep, appear to be geologically and hydrologically isolated, allowing for future ISR development.

Importantly, the mineralisation that has been intersected in the southwest portion of the project appears to be hosted in a stratigraphically lower sandstone package than the mineralisation hosted by the two sand packages on the eastern portion of the project area. This suggests additional areas and horizons for exploration efforts.

Drilling reported in the most recent area drilled (Figure 1 below) has further supported this geologic interpretation returning the most significant assay results to date with the previously reported 2.6m at 0.101% (1,010 ppm) U<sub>3</sub>O<sub>8</sub> from 257.6m including 2.0m at 0.124% (1,240 ppm) U<sub>3</sub>O<sub>8</sub> at 257.9m in PR25-093.

New results from this area are highlighted by PR25-103 with 1.2m at 0.040% (400 ppm) U<sub>3</sub>O<sub>8</sub> from 173.7m and PR25-105 with 1.2m at 0.032% (320 ppm) U<sub>3</sub>O<sub>8</sub> from 254.7m.

**Figure 1:** Current land package showing the 2025 drilling program at the Pine Ridge Uranium Project.

The recent drill results are shown in Table 1 and collar details are shown in Table 2.

**Figure 2:** Inset map 1 showing the locations and results of the most recent holes drilled at the Pine Ridge Project. Intervals are reported at a cutoff of 200 ppm U<sub>3</sub>O<sub>8</sub> and a thickness of >0.3m.

**Figure 3:** Cross section, looking west, from A to A'. Significant results from the newly-reported drilling are highlighted while previously reported holes are coloured grey.

## Pine Ridge Uranium Project Overview

The Pine Ridge Project is an In-Situ Recovery (ISR) uranium exploration project located in the southwestern Powder River Basin of Wyoming, the premier U.S. uranium basin. The Project is surrounded by existing uranium projects held by UEC and Cameco and is located only ~15km from Cameco's Smith Ranch Mill, which has a licensed capacity of 5.5Mlbs U<sub>3</sub>O<sub>8</sub> p.a. The Smith Ranch mill is one of the largest uranium production facilities in the U.S.

## Competent Person Statement

The information in this report that specifically relates to the Exploration Results at the Pine Ridge Project is based on information compiled by Mr. Stuart Bryan Soliz. Mr. Soliz is a Registered Member of the Society for Mining, Metallurgy and Exploration, a 'Recognised Professional Organisation' (RPO) by the ASX. Mr. Soliz is a professional geologist employed by SOLA Project Services LLC, which provides services to the Company on a contractual basis. Mr. Soliz has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr. Soliz consents to the inclusion in the announcement of the matters based on his information in the form and context in which it appears. Mr. Soliz does not hold securities in the Company.

## An Emerging Uranium Powerhouse

Global Uranium and Enrichment Limited is an Australian public listed company providing unique exposure to not only uranium exploration and development but also the uranium enrichment space. Amid a nuclear energy renaissance, Global Uranium is developing a portfolio of advanced, high grade uranium assets in prolific uranium districts in the U.S. and Canada, and has established a cornerstone position in Ubaryon, an Australian uranium enrichment technology.

### Asset Portfolio:

- **Pine Ridge Uranium Project (Wyoming, USA):** Located in premier uranium mining region with an Exploration Target range established. More than 1,200 holes have been drilled on the property which identified over 140 miles of redox fronts with potential to define a substantial In-Situ Recovery uranium resource base.
- **Tallahassee Uranium Project (Colorado, USA):** JORC 2012 Mineral Resource estimate of 52.2MLbs  $U_3O_8$  at a grade of 530ppm  $U_3O_8$ <sup>1</sup> with significant exploration upside. Located in Colorado's Tallahassee Creek Uranium District, host to more than 100 MLbs  $U_3O_8$ .
- **Athabasca Basin Projects (Saskatchewan, Canada):** Portfolio of six high-grade exploration assets in the Athabasca Basin, home to the world's largest and highest-grade uranium mines. Portfolio includes the Newnham Lake Project with grades of up to 1,953ppm  $U_3O_8$  in historical drilling and the Middle Lake Project with boulder-trains with grades of up to 16.9%  $U_3O_8$ .<sup>2</sup>
- **Ubaryon Investment (Australia):** Cornerstone position in Ubaryon, an Australian uranium enrichment technology.
- **Maybell Uranium Project (Colorado, USA):** JORC 2012 Inferred Mineral Resource Estimate of 6.0MLbs  $U_3O_8$  at a grade of 849ppm  $U_3O_8$  with significant exploration upside as indicated in the Exploration Target. Historically production of approximately 5.3MLbs of  $U_3O_8$  at an average grade of 1,300ppm.<sup>3</sup>
- **Rattler Uranium Project (Utah, USA):** Located within La Sal Uranium District, Utah, 85km north of White Mesa Uranium/Vanadium mill, the only operating conventional uranium mill in the USA.

<sup>1</sup> Competent Persons Statement - Information on the Mineral Resources presented, together with JORC Table 1 information, is contained in the ASX announcement dated 5 September 2024 and titled "Tallahassee Uranium Project JORC Resource increased to 52.2 Mlb  $U_3O_8$ ". Measured 2.96MLbs of 550 ppm  $U_3O_8$ , Indicated 21.01MLbs of 610 ppm  $U_3O_8$ , Inferred 28.2MLbs of 480 ppm  $U_3O_8$  calculated applying a cut-off grade of 250ppm  $U_3O_8$ . Numbers may not sum due to rounding. Grade rounded to nearest 10ppm.

<sup>2</sup> Refer to the Company's ASX announcement dated 9 November 2021 for the JORC details of the Athabasca Projects and other historical information. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement of 9 November 2021.

<sup>3</sup> Competent Persons Statement - Information on the Mineral Resources presented, together with JORC Table 1 information, is contained in the ASX announcement dated 30 July 2025 and titled "Maiden High Grade JORC Resource at Maybell Uranium Project". Inferred 6.0MLbs of 849 ppm  $U_3O_8$  calculated applying a cut-off grade of 250ppm  $U_3O_8$ . Numbers may not sum due to rounding. Grade rounded to nearest 10ppm.

Where the Company refers to Mineral Resources in this announcement (referencing previous releases made to the ASX), it confirms that it is not aware of any new information or data that materially affects the information included in that announcement and all material assumptions and technical parameters underpinning the Mineral Resource estimate with that announcement continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Persons findings are presented have not materially changed from the original announcement.

## Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section)

| Criteria  | Commentary   |
|---|--|
| <i>Mineral tenement and land tenure status</i>                          | <p>Mineral interests are present under three types of ownership:</p> <ul style="list-style-type: none"> <li>o Privately owned (Fee Minerals)</li> <li>o Owned by the U.S. government (Federal Minerals)</li> <li>o Owned by the State government (State Minerals)</li> </ul> <p>The Company obtained control of mineral interests as follows:</p> <ul style="list-style-type: none"> <li>o Long term leasing of private mineral interest from the owners in a direct transaction.</li> <li>o Staking of unpatented mining claims on US government minerals in the field and recording the claims with the US Bureau of Land Management and the County Clerk of Converse County.</li> <li>o Long term lease of State-owned mineral interest from the Wyoming Office of State Lands and Investments.</li> </ul> <p>Acreage of mineral interest controlled by each method:</p> <ul style="list-style-type: none"> <li>o Private Minerals 8,856 acres/3,584 hectares</li> <li>o Federal Minerals 10,410 acres/4,213 hectares</li> <li>o State Minerals 2,313 acres/936 hectares</li> </ul> |
| <i>Exploration done by other parties</i>                                | <ul style="list-style-type: none"> <li>• Stakeholder conducted exploration drilling and geophysical logging on the project in the 2010s. Stakeholders' work is well documented and serves as the basis for the Exploration Target.</li> <li>• Historical operators conducted extensive drilling and geophysical logging on and around the property during the 1970s. While the results (geophysical logs) of this work are available, the details of the exploration program are not currently available and as such, data from this exploration was not used to develop the Exploration Target.</li> </ul>  |
| <i>Geology</i>  | <ul style="list-style-type: none"> <li>• The deposits are epigenetic uranium roll-fronts.</li> <li>• The project is located on the western flank of the Powder River structural basin. The uranium deposits are hosted in the Eocene aged Wasatch Formation and the Paleocene aged Fort Union Formation.</li> <li>• The host sandstones generally dip shallowly toward the east-northeast towards the synclinal axis of the basin.</li> </ul>  |
| <i>Drill hole Information</i>   | <ul style="list-style-type: none"> <li>• Figures 1 and 2, in the body of the announcement, show the locations of the 2025 drill holes and historical drill holes in the Company's current database.</li> <li>• Table 1 shows all intercepts and Table 2 lists drill hole details for the 2025 drilling which are represented on Figure 2, in the body of the announcement.</li> </ul>  |
| <i>Data aggregation methods</i>   | <ul style="list-style-type: none"> <li>• Raw gamma-log data was collected on 0.1-foot (0.03 m) intervals and</li> <li>• The intervals displayed in Table 1 were composited at 0.02% <math>\text{eU}_3\text{O}_8</math> cutoffs. Minimum reported thickness is &gt;0.3 m.</li> <li>• The assumptions applied to reporting <math>\text{eU}_3\text{O}_8</math> grades are that the calibrated logging equipment is reporting the correct values and that the radiometric equilibrium factor of the deposit is 1 (no disequilibrium).</li> <li>• No metal equivalents are reported.</li> </ul>   |
| <i>Relationship between mineralisation widths and intercept lengths</i> | <ul style="list-style-type: none"> <li>• Mineralisation occurs in meandering, generally flat-lying paleochannels that are up to 1,000m wide as well as eolian deposits. The vertical drill holes tested this mineralisation at the appropriate orientation and</li> </ul>  |

| Criteria                                  | Commentary  |
|---|---|
|   | provide close to a “true thickness” of mineralisation.  |
| <i>Diagrams</i>                           | <ul style="list-style-type: none"> <li>Appropriate maps and sections are included in the body of the announcement.</li> </ul>   |
| <i>Balanced reporting</i>                 | <ul style="list-style-type: none"> <li>2025 drill hole locations within the Company’s property are shown on the drill hole map in Figures 1 and 2. The 2025 results are reported in Table 1 utilizing the grade thresholds described above and the location details are shown in Table 2.</li> </ul>                                |
| <i>Other substantive exploration data</i> | <ul style="list-style-type: none"> <li>Historic work by Conoco and Stakeholder Energy included 1,214 drill holes and the data is all available to Global and Powder River Basin LLC</li> <li>The Company has also estimated an Exploration Target for the project (<i>Refer ASX announcement dated 12 March 2025</i>).</li> </ul>   |
| <i>Further work</i>                       | <ul style="list-style-type: none"> <li>The Company will continue the drill the balance of the 38,000m (125,000 ft.) 2025 drill program and will assess its large dataset to find additional information to aid ongoing and future exploration.</li> <li>Additional exploration drilling is under consideration for 2026.</li> </ul> |
