ASX Release

YUINMERY AIRCORE DRILLING PROGRAM COMPLETED

SUMMARY

Empire Resources Limited (ASX: ERL; “Empire” or the “Company”) is pleased to announce the completion of a 1,631m (45 hole) air core (AC) program at the Company’s Yuinmery Copper-Gold Project. The program commenced on 10 January 2026 and aimed to test potential new zones of shallow Au/Cu mineralisation.

The samples have now been taken to a Perth mineral laboratory for Au-Cu assaying. Assays are expected to take about 4 weeks.

Planning of a substantial Reverse Circulation (RC) drilling program at Yuinmery is well advanced. The RC program is not predicated on the results of the recent AC program but will be modified to accommodate significant results from that program.

This announcement is authorised for release by:

Michael Ruane
