EKJV Exploration

During the second quarter of FY26, a total of 5,205 m of exploration diamond drilling (DD) was completed within the East Kundana Joint Venture (EKJV) area (Figure 1). The drilling program was undertaken to test and extend known mineralisation and to support ongoing resource definition activities at the Sadler and Golden Hind deposits (Table 1).

At the Sadler deposit, four diamond drill holes were completed during the reporting period. This report presents assay results for six drill holes received during the quarter, comprising results from drill holes completed during the reporting period and outstanding assays from drill holes completed in the previous quarter.

At the Golden Hind deposit, six diamond drill holes were completed during the reporting period. Assay results for seven drill holes received during the quarter are reported herein, including outstanding assay results from drill holes completed in the previous quarter.

The drilling results reported herein have not been incorporated into a new or updated Mineral Resource estimate, and there is no material change to the previously reported Mineral Resources for the EKJV.
