**ASX ANNOUNCEMENT**

# Quarterly Activities Report for the period ending 31 December 2025

## Highlights

- Stelar's primary focus during the December Quarter continued to be directed towards identifying new business development opportunities to expand its portfolio of projects in Tier 1 jurisdictions. The commodities being assessed include gold, copper, rare earths, uranium and mineral sands.
- A review is to be undertaken of previous assay results on a number of Stelar's projects to assess economic prospectivity given the recent appreciation in precious metal and base metal prices.

---

Stelar Metals Limited (ASX:**SLB**) ("Stelar" or the "Company") provides an update for the three month period ending 31 December 2025.

## Projects

The Company is actively hunting for potential business development opportunities to expand its portfolio of projects in Tier 1 jurisdictions. Considerable effort was undertaken during the quarter identifying and assessing advanced and greenfield projects covering various commodities across a number of Australian jurisdictions leading to discussions being held with several third parties. Stelar Metals is currently following up on a number of these discussions with a view to potentially acquiring a new flagship project to add to the current project portfolio.

In addition, the recent substantial increase in the commodity prices of precious metals and other commodity base metals has led the Company to commence a review of previously recorded assay data for other elements across a number of Stelar's projects as these could provide considerable economic benefit to some of the Company's portfolio of projects. An example of one of these opportunities includes some highly anomalous silver grades which were recorded at the Lone Pine Prospect within the Baratta Copper Project in South Australia which have never been investigated but may now have considerable economic value given the appreciation in the silver price.

Another example is the potential for further discoveries at the Trident Lithium Project in western New South Wales given it extends over the extensive Euriowie Pegmatite Field which was historically mined for tin between 1884 and the 1930's. A significant increase in the tin price along with recently observed green shoots seen in the lithium price has led Stelar to

undertake a reassessment of the potential for the project and untested targets across the considerable pegmatite occurrences found at Trident.

The Company intends to update the market on the results of these reviews during the upcoming March Quarter.

Stelar Metals is also continuing to negotiate with South Australian Native Title Holders to secure access to enable exploration to resume at a number of its existing projects in South Australia.

Finally, as part of cost-cutting measures and preserving available cash over this period, in November Mr Colin Skidmore stepped down as Chief Executive Officer to fill the position of Chief Geologist on a part-time basis.

## ABOUT STELAR METALS

Stelar Metals' experienced and successful exploration and development team is targeting the discovery and production of critical minerals, with increasing global demand to enable the world to achieve net zero emissions.

Stelar's Baratta Copper Project, located in South Australia, is hosted within the Adelaidean rocks of the Flinders Ranges. The Project is considered highly prospective for sediment-hosted copper mineralisation, akin to the Central African Copper belt. The historic Baratta Copper Mine produced copper ore between 1896 and 1904 from a 1.5 km-long zone of strata bound workings in a structure splaying off the Bibliando Thrust. Stelar is conducting exploration activities a 7-kilometre corridor of copper mineralisation and geophysical targets that have been overlooked by previous explorers.

Stelar's Trident Lithium Project is located near mining, industrial, transport and green power infrastructure at Broken Hill in NSW. The Trident Lithium Project extends over the 20km strike length of the Euriowie Tin Pegmatite Field and is highly prospective for hard rock lithium mineralisation. Mapped LCT-type pegmatites vary in size but can be up to 100 metres wide and extend in outcrop for over 1 kilometre in length. Trident was one of Australia's first lithium and tin mining provinces, highlighting both the fertility and large scale of Stelar's lithium-rich pegmatite system.

## EXPLORATION RESULTS

The information in this announcement related to Exploration Results is based on information compiled by Mr Colin Skidmore, a Competent Person who is a Member of the Australian Institute of Geoscientists. Mr Skidmore is a full-time employee of Stelar Metals Ltd. Mr. Skidmore has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activities being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the JORC Code (2012)). Mr. Skidmore consents to including matters in this announcement based on his information in the form and context in which it appears.

This announcement includes information related to Exploration Results prepared and first disclosed under the JORC Code (2012) and extracted from the Company's initial public offering prospectus, which was released on the ASX on 16 March 2022. A copy of this prospectus is available from the ASX Announcements page of the Company's website: <https://stelarmetals.com.au/>.

The Company confirms that it is unaware of any new information or data that materially affects the information in the relevant market announcement. Where the information relates to Exploration Results, the Company confirms that the form and context in which the competent person's findings are presented have not been materially modified from the original market announcement.
