

ASX ANNOUNCEMENT

6 February 2026

Rumble completes acquisition of the highly prospective Thunderstorm Gold Project

Highlights

- Rumble has completed the acquisition of the remaining 70% in three exploration tenements in the Fraser Range Province from former joint venture partner IGO Limited to secure 100% of the highly prospective Thunderstorm Gold Project
- The Thunderstorm Project includes the gold discoveries at Gazelle and Pion
- Wide spaced drilling at the Gazelle Prospect returned high-grade palaeochannel/supergene gold mineralisation. Results included:
 - **16m @ 6.69 g/t Au from 42m (20AFAC11321)¹**
 - **6m @ 9.15 g/t Au from 48m (18AFAC30771)¹**
- The Pion Prospect returned gold anomalism in six consecutive drill holes over a section length of 1.2km with the best intersection returning:
 - **4m @ 3.80 g/t Au from 86m (18AFAC20486)²**
- The style of gold mineralisation is considered having potential for hosting both large-scale palaeochannel and primary basement gold deposits
- A heritage survey is planned to commence in H1 CY2026 ahead of a ~5000m Aircore/Slimline RC drilling program to define and extend the mineralisation discovered at the Gazelle and Pion Prospects.

Peter Harold, Managing Director and CEO commented:

"We are pleased to have completed this acquisition that includes the two high grade gold discoveries at Gazelle and Pion that remain untested by follow up drilling. Our exploration team rates this project highly due to its potential to host both large-scale palaeochannel and basement gold deposits. Following the completion of a heritage survey the team are eager to test these walk-up targets and discover more as we continue to grow and advance our gold portfolio in Western Australia."

² Refer Rumble ASX release 1 July 2019 "Significant High Grade Gold Mineralisation Intersected at JV"

Rumble Resources Limited (**ASX: RTR**) ("**Rumble**" or the "**Company**") is pleased to announce that it has completed the acquisition of the remaining 70% in three exploration tenements in the Fraser Range Region from former joint venture partner IGO Limited ("**IGO**") and thus has now secured 100% of the highly prospective Thunderstorm Gold Project. The acquisition was initially reported disclosed on 7 April 2025.

Completion of Acquisition

- The remaining 70% interest in Exploration Licences E28/2528, E28/2595, and E28/2529 in the Albany-Fraser Range Region, have been acquired from former joint venture partner IGO Limited.
- All conditions precedent have now been satisfied.
- The consideration was 8,794,589 Rumble ordinary shares ("Consideration Shares"), based upon \$300,000 worth of Rumble shares at a deemed issue price of \$0.034 derived from the 5-day VWAP immediately prior to the Execution Date. The Consideration Shares have now been issued upon completion of the acquisition, without Rumble shareholder approval using Rumble's existing placement capacity available under ASX Listing Rule 7.1.
- The acquisition also grants to IGO (or its nominee) a 1.05% Net Smelter Return (NSR) royalty in respect of mineral products produced, sold, removed or otherwise disposed within E28/2528, E28/2595, and E28/2529

Project Overview

The Thunderstorm Gold Project now comprises six granted exploration licenses (E28/2528, E28/2529, E28/2595, E28/3219, E28/3240 and E28/3384) and two new applications (E28/3500 and E28/3566) for a total area of 601 km². The Project lies over a major northeast trending terrane boundary (Newman Shear Zone) between the Fraser Zone (hosting IGO's Nova Ni Deposit) and the Nornalup Zone. The project area is completely under cover (mainly Eocene to Miocene) and sits on the edge of the Eucla Basin (Cenozoic).

Previous exploration completed by IGO includes 530 vertical air core drill holes over an area of approximately 40km by 20km on 1,500m line spacings. Airborne geophysics including magnetics and EM (Spectrum EM survey) complemented the drilling.

Results from the air core drilling returned widespread gold anomalism from within both the lower Cenozoic cover sequence and the underlying gneissic rocks (see Figure 1). Higher tenor gold mineralization discovered at Gazelle and Pion is inferred to be associated with the earlier Eocene palaeodrainage systems and nearby potential basement gold sources.

Gazelle Gold Prospect

Widespread gold mineralisation at Gazelle includes:

- **16m @ 6.69 g/t Au from 42m** (20AFAC11321)¹
 - including 4m @ 22.2 g/t Au from 50m
- **6m @ 9.15 g/t Au from 48m**
- **8m @ 1.31 g/t Au from 58m** (20AFAC11310)*
- **4m @ 1.37 g/t Au from 70m** (20AFAC11311)*

Pion Gold Prospect

Six consecutive drillholes (**1.2km along section**) returned gold anomalism with the best result of:

- **4m @ 3.80 g/t Au from 86m** (18AFAC20486)*

*All Air Core Drilling Vertical – True Width

Mineralisation Style

Research by IGO on the particulate gold from Gazelle and Pion has shown three types of gold grains are present. Scanning electron microscope (SEM) has shown:

- Particulate gold grains derived from alluvial processes;
- Chemically regrown crystalline gold grains – grown in situ; and
- Chemically plated gold grains – gold deposited onto biogenic material.

Gold found in the basement gneissic rocks is inferred to be both chemical gold mobilised from the overlying Cenozoic cover sequence and supergene gold mineralisation that has migrated laterally from a primary basement gold system.

Next Steps

The Company is planning an ~5000m infill Aircore/Slimline RC drilling campaign that will initially test the attitude and extent of the mineralised palaeochannel mineralisation at Gazelle and Pion. With the acquisition now completed, this program is likely to commence in 1H CY2026 once heritage survey clearances are obtained.

NOTICE UNDER SECTION 708A(5)(e) OF THE CORPORATIONS ACT 2001

Rumble advises that it has completed the issue today of 8,794,589 fully paid ordinary shares in the capital of the Company (**Shares**) at a price of \$0.034 per Share (non-cash) in respect of the acquisition of the outstanding 70% in three exploration tenements in the Fraser Range Region from former joint venture partner IGO Limited. The acquisition was previously detailed in the Company's announcement of 7 April 2025 and Appendix 3B released 9 May 2025.

The Company gives notice pursuant to section 708A(5)(e) of the *Corporations Act 2001* (Cth) (**Corporations Act**) that:

1. the Company issued the Shares without disclosure to investors under Part 6D.2 of the Corporations Act; and
2. as at the date of this notice, the Company has complied with:
 - (a) the provisions of Chapter 2M of the Corporations Act as they apply to the Company; and
 - (b) section 674 and section 674A of the Corporations Act; and
3. as at the date of this notice, there is no information that is "excluded information" (as defined in section 708A(7) of the Corporations Act) which is required to be disclosed by the Company in accordance with Section 708A(8) of the Corporations Act.

Authorisation

This announcement is authorised for release by the Board of the Company.

About Rumble

Rumble Resources Ltd is an Australian based exploration company, listed on the ASX in July 2011. Rumble was established with the aim of adding significant value to its selected mineral exploration assets and to search for suitable mineral acquisition opportunities in Western Australia.

Rumble has a unique suite of resources projects including the Western Queen Gold-Tungsten Project which is being developed to deliver near term cash flow from the existing underground resources and resource growth through future exploration success. In addition, the discovery of the Earraheedy Zn-Pb-Ag Project has demonstrated the capabilities of the exploration team to find world class orebodies.
