ASX Announcement
16 March 2026

Soil Sampling Results Confirm Expanded Mineralised Footprint and Priority Targets at Saltwater Project

Highlights

- **Highly encouraging results received from latest phase of soil sampling at the Saltwater Project** in the Pilbara region of Western Australia
- Results have highlighted the **potential for a large polymetallic and gold-bearing mineralised system** at the **Saltwater Dome**
- The Saltwater Dome anomaly is potentially linked (under cover) to **compelling multi-element soil anomaly at Tunnel Creek** – the total area of interest covers **a strike of ~ 21 km**
- Soil sampling at Saltwater Dome and Tunnel Creek tested 741 targeted sites:
  - Saltwater Dome recorded **gold values up to 845ppb**, supported by **coincident multi-element anomalism** including copper, antimony, lead, zinc and bismuth.
  - At Tunnel Creek **strong gold, antimony and bismuth anomalies** support previous sampling in the area.
- **Next steps:**
  - Field mapping, infill soil sampling and EM geophysical survey program at **Saltwater Dome**
  - Field mapping and infill soil sampling at **Tunnel Creek**

Aruma Resources Limited (ASX: AAJ) (Aruma or the **Company)** is pleased to announce highly encouraging results from the recent soil sampling program at its 100% owned Saltwater Project, located in the Pilbara region of Western Australia.

The extensive sampling program collected a total of 741 samples across the priority Saltwater Dome (E52/3818) and Tunnel Creek (E52/3846) target areas.

The results have extended the anomalies and highlight the potential for a significant polymetallic and gold-bearing mineralised system at Saltwater Dome and have identified a compelling multi-element soil anomaly at Tunnel Creek (Figure 1).

GRANT FERGUSON – Managing Director
BRETT SMITH – Non-Executive Director

www.arumaresources.com

The Saltwater Project is located approximately 120km southwest of Mt Newman and interpreted to sit within the Ashburton structural corridor along strike from the Kalamazoo Resources' (ASX: KZR) Ashburton Gold Project.

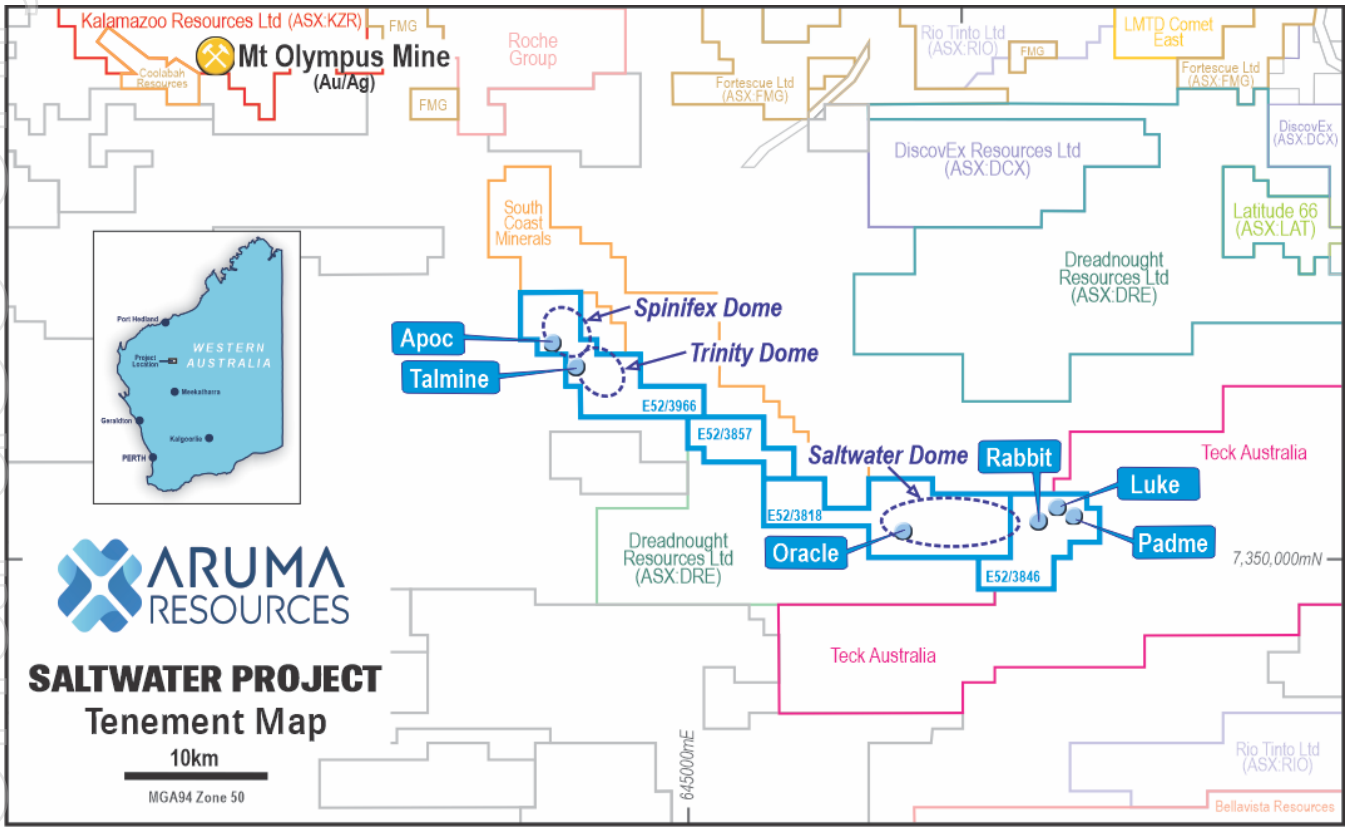

Figure 1: Regional location map showing Saltwater Project, Western Australia

Aruma Resources Managing Director Grant Ferguson stated:

*"The latest results from our ongoing exploration programs at the Saltwater Project represent a significant advancement in delineating high-priority targets within the Saltwater Dome and Tunnel Creek areas. At Saltwater Dome, the expanding geochemical footprint—supported by robust multi-element anomalism including untested copper and gold signatures—highlights the **substantial scale** and untapped potential of this **emerging system**. These findings build on prior work and reinforce the Project's prospective geology for gold and base metal mineralisation."*

At Tunnel Creek, the confirmation of the Luke Prospect as a standout primary gold target, characterised by a 1.65km² multi-element anomaly with strong coincident gold, antimony and bismuth values, positions this target for accelerated progress. With encouraging early indicators at the Padme and Rabbit Prospects and the structurally favourable setting across the broader Tunnel Creek area, we are able to prioritise follow-up activities, including potential infill sampling and geophysical surveys, with a view to advancing drill-ready targets into drill testing during 2026."

Saltwater Dome Sampling Results

The sampling program at Saltwater Dome has significantly enhanced the geological understanding and prospectivity of this priority target area and confirmed the presence and extended the scale of anomalies at the **Saltwater Pool Prospect** and the **Oracle Prospect**.

A total of 497 soil samples were collected on a 360m × 360m reconnaissance grid across Saltwater Dome. The program was designed to identify potential new zones of gold and base-metal mineralisation, while also refining and evaluating possible extensions to the known mineralised footprints at the Saltwater Pool and Oracle Prospects (Figure 2).

This phase of sampling was the first dome-wide systematic soil sampling campaign undertaken in the area and has further strengthened the Company's interpretation that a large, mineralised hydrothermal system may be associated with the Saltwater Dome. Key outcomes from the Saltwater Dome soil sampling program include:

- A well-defined and expanded gold and polymetallic (Cu–Pb–Zn) coincident anomaly was defined across the **Saltwater Pool** and **Oracle Prospects**, enlarging the interpreted mineralised footprints to approximately 3km² and 1.3km², respectively.
- Strong geochemical values were returned from the **Oracle Prospect**, with gold assays returning up to 845ppb, alongside elevated copper (300ppm), lead (250ppm) and zinc (100ppm) occurring as coincident anomalies.
- Anomalous zones are spatially associated with bleached Cheela Springs Basalt and Mt McGrath siltstone formations, where the removal of alluvial cover has exposed favourable host lithologies.
- A circular copper anomaly at the **Saltwater Pool Prospect** remains largely untested by drilling, noting that historical 2021 RC drilling[1] is interpreted as insufficient to properly evaluate the circular geochemical feature.
- Higher-grade gold anomalies appear to be located proximal to mapped north–south quartz veins identified in historical geological mapping completed by Uranerz Australia Pty Ltd (1983)[2] and also associated with historical gold nuggets which appear to be close to the source[3] , indicating the presence of near-surface gold mineralisation consistent with structural controls.

Collectively, these results highlight the potential for a significant polymetallic and gold-bearing mineralised system within the Saltwater Dome, with multiple target styles consistent with both VMS-type mineralisation and structurally hosted orogenic gold emplacement models.

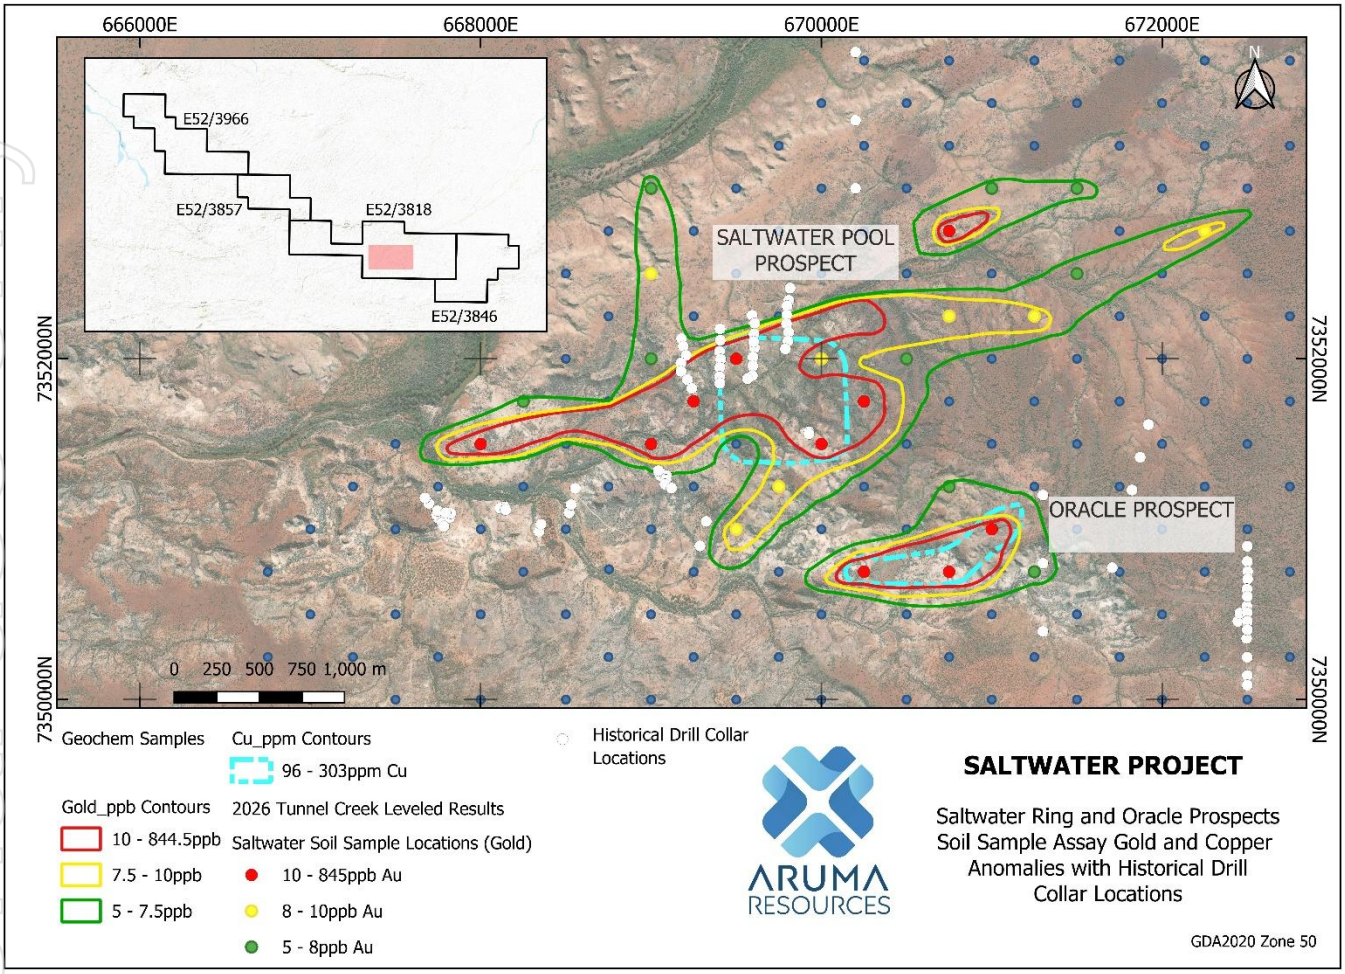

Figure 2: Saltwater Dome Soil Samples with Gold and Copper Anomaly Contours

Tunnel Creek Sampling Results

A total of 244 soil samples were collected across 22.3km² on a 200m × 160m grid at the Tunnel Creek area, in the eastern region of the Saltwater Project.

This was an infill sampling program designed to further refine and delineate the coincident gold and base-metal anomalous zones previously identified at the Luke, Padme and Rabbit Prospects, to provide improved geochemical resolution to support ongoing exploration targeting.

Key outcomes from the Tunnel Creek sampling program include:

- The **Luke Prospect** has been confirmed as the priority target, exhibiting a compelling multi-element soil anomaly. This is characterised by coincident elevated gold (Au), antimony (Sb) and bismuth (Bi), indicative of a favourable pathfinder association commonly linked to orogenic or intrusion-related gold systems.

- Robust geochemical signatures are evident across the **Luke Prospect** and peripheral zones of the **Rabbit Prospect**. Gold assays reached a peak of 35ppb Au, with coincident lower level but elevated Sb and Bi values
- The Luke soil anomaly covers an approximate area of 1.65km² and displays a distinct northeast–southwest (NE–SW) trend, consistent with regional structural and lithological controls that may influence mineralisation localisation.
- The **Padme** and **Rabbit Prospects** show encouraging early-stage potential through anomalous geochemistry and require additional detailed follow-up work—including infill sampling, geological mapping and potentially geophysical surveys—prior to advancing to drill planning.
- The broader Tunnel Creek area is characterised by structural complexity, including interpreted faulting and shearing. Historical mapping indicates the presence of ferruginous gossan material at surface, which provides favourable host conditions for polymetallic gold and base metal mineralisation.

These results underscore the prospective nature of the Luke Prospect as a high priority focus for further exploration. The results also highlight the upside potential of other prospects within the Tunnel Creek area.

Next Steps

Planned next phase fieldwork at the Saltwater Project includes; at Saltwater Dome, additional geological mapping, review and potential relogging of 2021 RC chip samples from previous drilling at the Saltwater Pool Prospect and design of detailed electromagnetic geophysical surveys to refine drill targeting. This will be followed by; infill soil sampling to further constrain high-priority anomalies and a gradient array survey over the Saltwater Ring and Oracle Prospects to assist with defining/refining drill targets.

At the Tunnel Creek area, further geological mapping and infill soil sampling is also planned at the Luke Prospect, to advance it to drill-ready status.

This announcement has been authorised for release by the Board of Aruma Resources Ltd.

About Aruma Resources

Aruma Resources Limited (ASX: AAJ) is an ASX-listed copper-focused exploration company committed to the exploration and development of a portfolio of prospective projects in world-class mineral belts. Its core project is the high-grade Tillex Copper sulphide Project in the prolific Timmins mineral district in Ontario, Canada. It also holds copper exploration assets in the Mt Isa region of Queensland and multi-commodity exploration projects in South Australia and Western Australia.

Competent person statement

The information in this release that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Grant Ferguson who is a Fellow of the Australian Institute of Geoscience (AIG). Mr Ferguson is Managing Director and a full-time employee of the Company. Mr Ferguson has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserve'. Mr Ferguson consents to the inclusion in the release of the matters based on his information in the form and context in which it appears. All exploration results that have been reported previously and released to ASX are available to be viewed on the Company website www.arumaresources.com. The Company confirms it is not aware of any new information that materially affects the information included in the original announcement. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original announcements.

Forward Looking Statement

Certain statements contained in this document constitute forward looking statements. Such forward-looking statements are based on a number of estimates and assumptions made by the Company and its consultants in light of experience, current conditions and expectations of future developments which the Company believes are appropriate in the current circumstances. These estimates and assumptions while considered reasonable by the Company are subject to known and unknown risks, uncertainties and other factors which may cause the actual results, achievements and performance of the Company to be materially different from the future results and achievements expressed or implied by such forward-looking statements. Forward looking statements include, but are not limited to, statements preceded by words such as "planned", "expected", "projected", "estimated", "may", "scheduled", "intends", "anticipates", "believes", "potential", "could", "nominal", "conceptual" and similar expressions. There can be no assurance that Aruma plans to develop exploration projects that will proceed with the current expectations. There can be no assurance that Aruma will be able to confirm the presence of Mineral Resources or Ore Reserves, that any mineralisation will prove to be economic and will be successfully developed on any of Aruma's mineral properties. Investors are cautioned that forward looking information is no guarantee of future performance and accordingly, investors are cautioned not to place undue reliance on these forward-looking statements.

JORC Code, 2012 Edition – Table 1
Saltwater Surface Sampling Q1 2026

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Results reported here are <u>not</u> being used towards Mineral Resource Estimate or Reserve calculations.

Criteria	JORC Code explanation	Commentary
Sampling techniques	• *Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.* • *Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.* • *Aspects of the determination of mineralisation that are Material to the Public Report.* • *In cases where 'industry standard' work has been done this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information.*	**Soil Sampling Program:** A total of 741 soil samples were collected at a depth from natural surface of approximately 20cm (minimum), by Geomin Services Pty Ltd, a Perth based geoservices consultancy. Sample spacing was conducted on the following spacing: • Saltwater Dome Area –Offset 500m x 250m spaced grid. • Tunnel Creek Area – 400m (130 azimuth) x 160m (approximately 220 azimuth), as infill to previous sampling, it provides a 200m x 160m ○ The samples were sieved in the field to < 80 micron and upto150g of sample media collected and submitted for assay to Intertek Perth. After drying, the soil samples were pulverized with 25g of pulp split-off for aqua regia and ICP-MS finish on a 33-element suite (method AR25/eMS) with a minimum detection level of 0.1ppb Au. Samples were assayed for Au, Ag, Al, As, B, Ba, Bi, Ca, Cd, Ce, Co, Cr, Cu, Fe, K, La, Mg, Mn, Mo, Na, Ni, P, Pb, S, Sb, Sc, Sr, Te, Ti, Tl, V, W, Zn ○ Soil sampling grids were designed to provide vectors to mineralisation, with each grid location determined by existing nearby rock chip anomalies. ○ No mineralisation was directly observed in the soil samples and determination of anomalism is dependent on lab analysis
Drilling techniques	• *Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).*	○ No drilling has been undertaken in this program and reported in this announcement.

Criteria	JORC Code explanation	Commentary
Drill sample recovery	• *Method of recording and assessing core and chip sample recoveries and results assessed.* • *Measures taken to maximise sample recovery and ensure representative nature of the samples.* • *Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.*	○ Drilling results are not being reported, no drilling data is included within this announcement.
Logging	• *Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.* • *Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.* • *The total length and percentage of the relevant intersections logged.*	○ Drilling results are not being reported, no drilling data is included within this announcement.
Sub-sampling techniques and sample preparation	• *If core, whether cut or sawn and whether quarter, half or all cores taken.* • *If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.* • *For all sample types, the nature, quality and appropriateness of the sample preparation technique.* • *Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.* • *Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling.* • *Whether sample sizes are appropriate to the grain size of the material being sampled.*	○ No subsampling was completed. ○ The samples were sieved in the field to < 80 micron, with approximately and up to 150g of sample media collected and submitted for assay to Intertek Perth. After drying, the soil samples were pulverized with 25g of pulp split-off for aqua regia and ICPMS on a 33-element suite with a minimum detection level of 0.1ppb Au. ○ In the field duplicate samples were taken from within 1m of the original using the same sampling technique every 30 samples, while Certified Reference Material from OREAS was inserted as blanks (OREAS25b) or as QA/QC (OREAS260) was also inserted within any given 30m sample progression giving approximately 10% coverage throughout the total program.

Criteria	JORC Code explanation	Commentary
Quality of assay data and laboratory tests	• *The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.* • *For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.* • *Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established.*	○ Intertek Perth insert their own QAQC samples, including resplits, checks, blanks and standards. No QAQC issues were reported. ○ The samples were sieved in the field to <80 micron and upto150g of sample media collected and submitted for assay to Intertek Perth. After drying, the soil samples were pulverized with 25g of pulp split-off for aqua regia and ICP-MS finish on a 33-element suite fire assay a minimum detection level of 1ppb Au. Samples were assayed for Au, Ag, Al, As, B, Ba, Bi, Ca, Cd, Ce, Co, Cr, Cu, Fe, K, La, Mg, Mn, Mo, Na, Ni, P, Pb, S, Sb, Sc, Sr, Te, Ti, Tl, V, W, Zn ○ The assay methods used are considered industry standard and are appropriate for early-stage exploration
Verification of sampling and assaying	• *The verification of significant intersections by either independent or alternative company personnel.* • *The use of twinned holes.* • *Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.* • *Discuss any adjustment to assay data.*	○ The Saltwater Dome is the first large dome wide soil sampling program. Smaller concentrated areas have previously been tested, however the objective was to identify additional areas across the Saltwater Dome. ○ The Tunnel Creek Area soil sampling program is an infill soil sampling to further understand and refine the identified Luke, Padme, Rabbit and Darth Prospects. and Talmine Prospects soil sampling programs are the first phase of testing, however previous sparse rock chip samples reflect similar grades. ○ Drilling results are not being reported, no drilling data is included within this announcement. ○ Soil samples information including geological information coordinates and track data saved from handheld GPSs used in the field ○ Field data is entered into excel spreadsheets to be loaded into a Geobank database ○ Primary data was collected by Geomin Services at the project site and provided to the Company. ○ All observations were recorded digitally and entered into the company's database. Data verification and validation is checked upon entry into the database. ○ The Company is implementing the Geobank data storage system ○ Where the laboratory repeated an assay following a high-grade Au result, the average of the primary and repeat Au assay is reported.

Criteria	JORC Code explanation	Commentary
Location of data points	• *Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.* • *Specification of the grid system used.* • *Quality and adequacy of topographic control.*	○ All sample locations were recorded with a Garmin handheld GPS which has an accuracy of +/- 5m. GDA2020 Zone 50
Data spacing and distribution	• *Data spacing for reporting of Exploration Results.* • *Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.* • *Whether sample compositing has been applied.*	○ This report is for the reporting of exploration results derived from early-stage surface sampling programs. ○ Surface sampling reported in this release are used for exploration targeting purposes. ○ Data is not sufficient to establish any degree of geological grade continuity. ○ Drilling results are not being reported, no drilling data is included within this announcement. ○ Sample spacing and distribution is not sufficient to establish the degree of geological and grade continuity appropriate for a Mineral Resource
Orientation of data in relation to geological structure	• *Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.* • *If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.*	○ Soils samples collected as part of the program were collected across the interpreted northeast-southwest trends of the regional geology and structures in the project area.
Sample security	• *The measures taken to ensure sample security.*	○ All geochemical samples are collected, bagged and sealed by Aruma contractors and delivered by secured freight directly to Intertek Laboratory in Maddington
Audits or reviews	• *The results of any audits or reviews of sampling techniques and data.*	○ No external or third-party audits or reviews have been completed. ○ Sampling methodologies are considered industry best practice. ○ The program is continuously reviewed by Senior Aruma personnel

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	• *Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.* • *The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.*	○ The Saltwater Project, 120km SW of Newman is managed, explored and maintained by Aruma Resources. ○ The project contains four exploration licenses (EL52/3818, EL52/3846, EL52/3857 and EL52/3966) and covers a total area pf 450km^2 ○ All tenements are 100% owned by Aruma Resources. ○ All work completed was deemed low impact exploration so no POW's were required although the relevant station owner was fully informed of the activities at all stages. ○ Aruma has agreements in place with the Native Title holders, the Jidi Jidi Aboriginal Corporation
Exploration done by other parties	• *Acknowledgment and appraisal of exploration by other parties.*	○ The reports are acknowledged in the announcement and is numbered as a report in Minedex
Geology	• *Deposit type, geological setting and style of mineralisation.*	○ The Saltwater Project is located over Wyloo Group metasediments and the Bresnahan Group in the Ashburton Basin. ○ The Saltwater Project is prospective for orogenic gold, volcanogenic base-metals and unconformity related REEs. ○ Drilling results are not being reported, no drilling data is included within this announcement.

Criteria	JORC Code explanation	Commentary

Drill hole Information	• *A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:*
	  ○ *easting and northing of the drill hole collar*
	  ○ *elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar*
	  ○ *dip and azimuth of the hole*
	  ○ *down hole length and interception depth*
	  ○ *hole length.*
	• *If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.*
		○ Not applicable. Drilling not reported

Data aggregation methods	• *In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g. cutting of high grades) and cut-off grades are usually Material and should be stated.* • *Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.* • *The assumptions used for any reporting of metal equivalent values should be clearly stated.*	○ Results presented are final lab results as reported by the laboratory. Grades reported in the release are rounded to 2 or 3 significant figures. No averaging, aggregating or metal equivalents are reported ○ No metal equivalents reported ○ Single point surface sample results only have been reported. No data aggregation has been done

Criteria	JORC Code explanation	Commentary
Relationship between mineralisation widths and intercept lengths	• *These relationships are particularly important in the reporting of Exploration Results.* • *If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.* • *If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g. 'down hole length, true width not known').*	○ Not applicable. Mineralisation width not reported.
Diagrams	• *Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.*	○ Please refer to the accompanying document for figures and maps for locations of surface sampling
Balanced reporting	• *Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.*	○ Public reporting of exploration results by Aruma and past tenement holders and explorers are considered balanced.
Other substantive exploration data	• *Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.*	○ Suitable commentary of the geology encountered are given within the text of this document.

Criteria	JORC Code explanation	Commentary
Further work	• *The nature and scale of planned further work (e.g. tests for* • *lateral extensions or depth extensions or large-scale step-out drilling).* • *• Diagrams clearly highlighting the areas of possible extensions,* • *including the main geological interpretations and future* • *drilling areas, provided this information is not commercially sensitive.*	○ Geological mapping ○ Surface sampling ○ Geophysical re-evaluation ○ Aircore, RC and Diamond Drilling
