

ASX RELEASE | CLEARVUE TECHNOLOGIES LIMITED  
(ASX:CPV | OTC:CVUEF)

## CPV Submission to Victorian Energy Inquiry

ClearVue Technologies Limited (ASX: CPV) (“ClearVue” or the “Company”) advises that it has lodged a submission to the Victorian Government’s Inquiry into Renewable and Affordable Energy for Apartments.

The inquiry is examining pathways to expand renewable and affordable electricity access for apartment residents and other multi-unit dwellings, including technologies capable of generating electricity from building façades and other vertical surfaces where rooftop solar capacity is limited.

ClearVue’s submission outlines the potential role of building-integrated photovoltaic (BIPV) technologies, including solar façade and glazing systems, in supporting renewable energy generation within medium and high-density residential developments.

Separately, the Company notes that the **Property Council of Australia**, the peak body representing Australia’s property industry, referenced building-integrated photovoltaic technology in its submission to the inquiry as part of its **first recommendation**, which calls for research and development of solar generation and storage technologies, including investigation of building-integrated photovoltaic products and behind-the-meter systems.

ClearVue has made its submission available alongside the Property Council of Australia submission for reference.

**ClearVue CEO & Managing Director Douglas Hunt said:**

“Our submission highlights the potential contribution that building-integrated photovoltaic technologies can make to renewable energy generation in high-density buildings.

The Property Council of Australia’s submission highlights the transformative nature of building-integrated photovoltaics.

Many of the challenges identified in the Property Council submission are the same barriers ClearVue has been focused on addressing through its engineering and product development, with a building-material-first approach designed to support practical deployment of BIPV systems.”

## ABOUT CLEARVUE TECHNOLOGIES LIMITED

ClearVue Technologies Limited (ASX: CPV; OTCX: CVUEF) is an Australian technology company that integrates solar technology into building façade and rooftop surfaces to provide renewable energy generation and offset the operational carbon footprint of buildings. The Company's advanced, patented glass technology preserves glass transparency maintaining building aesthetics while generating energy.

ClearVue has extended solar energy-generation to vision glass, cladding, spandrel, balustrade, and skylight solutions. These solutions can offset operational energy requirements significantly contributing to the net zero building.

ClearVue's integrated solar façade is revolutionizing the way buildings are designed, constructed, and renovated. Experience how building façades will become a major contributing factor to reducing operational carbon by visiting ClearVue at [www.clearvuepv.com](http://www.clearvuepv.com).
