

24 April 2026

FALCON METALS MARCH QUARTER ACTIVITIES REPORT

For the three-month period ended 31 March 2026

Blue Moon Gold Project (VIC)

- Step-out diamond drilling continues at Blue Moon, designed to demonstrate scale potential along strike from the Falcon discovery holes drilled directly north of the 22 Moz Bendigo Goldfield
- Drilling to date has intersected three classic Bendigo style, stacked high-grade zones at Blue Moon, with a gentle northerly plunge, at varying below-surface depths:
 - Morning Glory Zone (~30-40m)
 - Lotus Zone (~500-650m)
 - Dahlia Zone (~700-900m)
- Visible gold intersected 80 metres north along strike from previous high-grade results in the Lotus Zone:
 - BMDD004W1 0.8m @ 86.2g/t Au from 635m, including:
 - 0.4m @ 167g/t Au from 635m
 - 1.0m @ 6.4g/t Au from 638m
- High-grade Lotus Zone now defined over a strike length of 280m, with visible gold intersected on the first three sections drilled and remains open along strike and down-dip
- High-grade results from the Dahlia Zone this quarter include:
 - BMDD001W9 3.0m @ 6.5g/t Au from 837.1m, including:
 - 0.9m @ 9.2g/t Au from 837.1m, and
 - 1.3m @ 8.5g/t Au from 838.8m
- Drilling with two diamond rigs continues 24/7, with a third diamond rig to commence drilling in the first week of May 2026 testing the northern extension of the prolific New Chum line of reef (historical production of 3.8Moz @ 15g/t Au)
- Significant backlog of assays at Victorian assay laboratories are resulting in delayed results – turnaround time had increased to more than 8 weeks, but showing signs of improvement
- Subsequent to the end of the quarter, EL008811 was granted directly north of EL007839, providing an additional 1.5km strike length on the interpreted lines of reef from the Bendigo Goldfield including Garden Gully and New Chum.

Pyramid Hill Gold Project (VIC)

- Regional aircore (AC) drilling of priority targets commenced in mid-January 2026, including both infill and reconnaissance aircore drilling – assays pending

Corporate

- Well-funded with cash balance at the end of the quarter of A\$19.3 million

For personal use only

CORPORATE

Finance

During the quarter, Falcon Metals Ltd (ASX: FAL) (Falcon, the Company) spent \$3.5 million on operating activities, including:

- \$3.1 million on exploration and evaluation costs
- \$0.2 million on corporate costs and overheads
- \$0.2 million on staff costs

Falcon received \$0.3 million in interest on cash deposits. Net cash outflow from operating activities was \$3.2 million. Corporate costs, overheads and staff costs were in line with the previous quarter.

At the end of the March 2026 quarter, Falcon retained \$19.3 million in cash.

Capital Structure

At the end of the quarter, Falcon had 213.7 million shares on issue and 13.7 million outstanding share options of which 3.1 million have vested. During the quarter, 1.1 million fully paid ordinary shares were issued following the exercise of employee share options.

EXPLORATION

Blue Moon Gold Project (100% FAL)

The Blue Moon Gold Project is on the 100%-owned licence EL007839 and is the exploration ground surrounding the Bendigo mining permit (that remains in moratorium) which had historical production of 22 Moz of gold. The project is located 25km west from the Fosterville Gold Mine with the Swan Zone (2.3 Moz @ 49.6 g/t Au), owned by Agnico Eagle (NYSE: AEM).

Background

The Blue Moon Gold Project is the down-plunge extension of the Garden Gully anticline, a conceptual target that was developed from a 3D reconstruction of the historical Bendigo workings, historical reports and field mapping. The Garden Gully anticline was the most productive in the Bendigo Goldfield, estimated to have produced 5.2 Moz @ 15g/t Au^{2,3} from areas where the more prospective parts of the sequence either outcropped or were close to the surface (see Figures 1 and 2). Although the Garden Gully line produced a significant amount of gold at high-grade, the reefs were not always continuous in thickness or grade. Therefore, the focus was on confirming the presence of the more prospective sequence and possible laminated quartz veins, historically referred to as leg reefs.

For personal use only

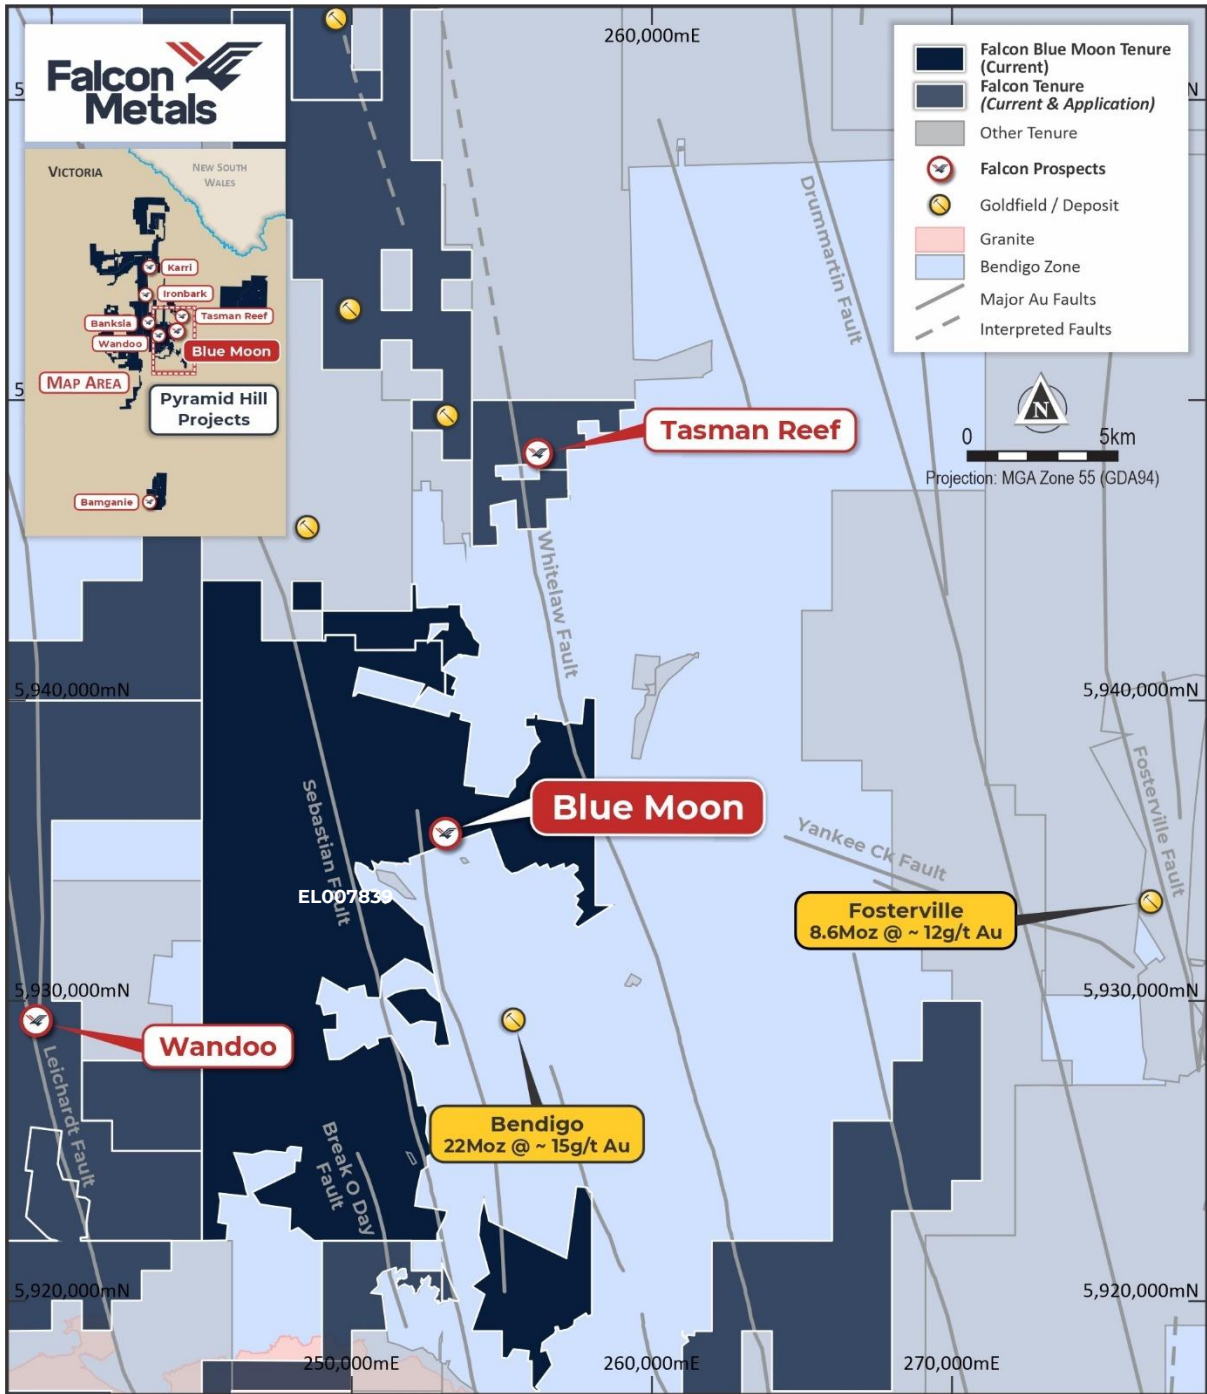

Figure 1 Location of the Blue Moon Gold Project

For personal use only

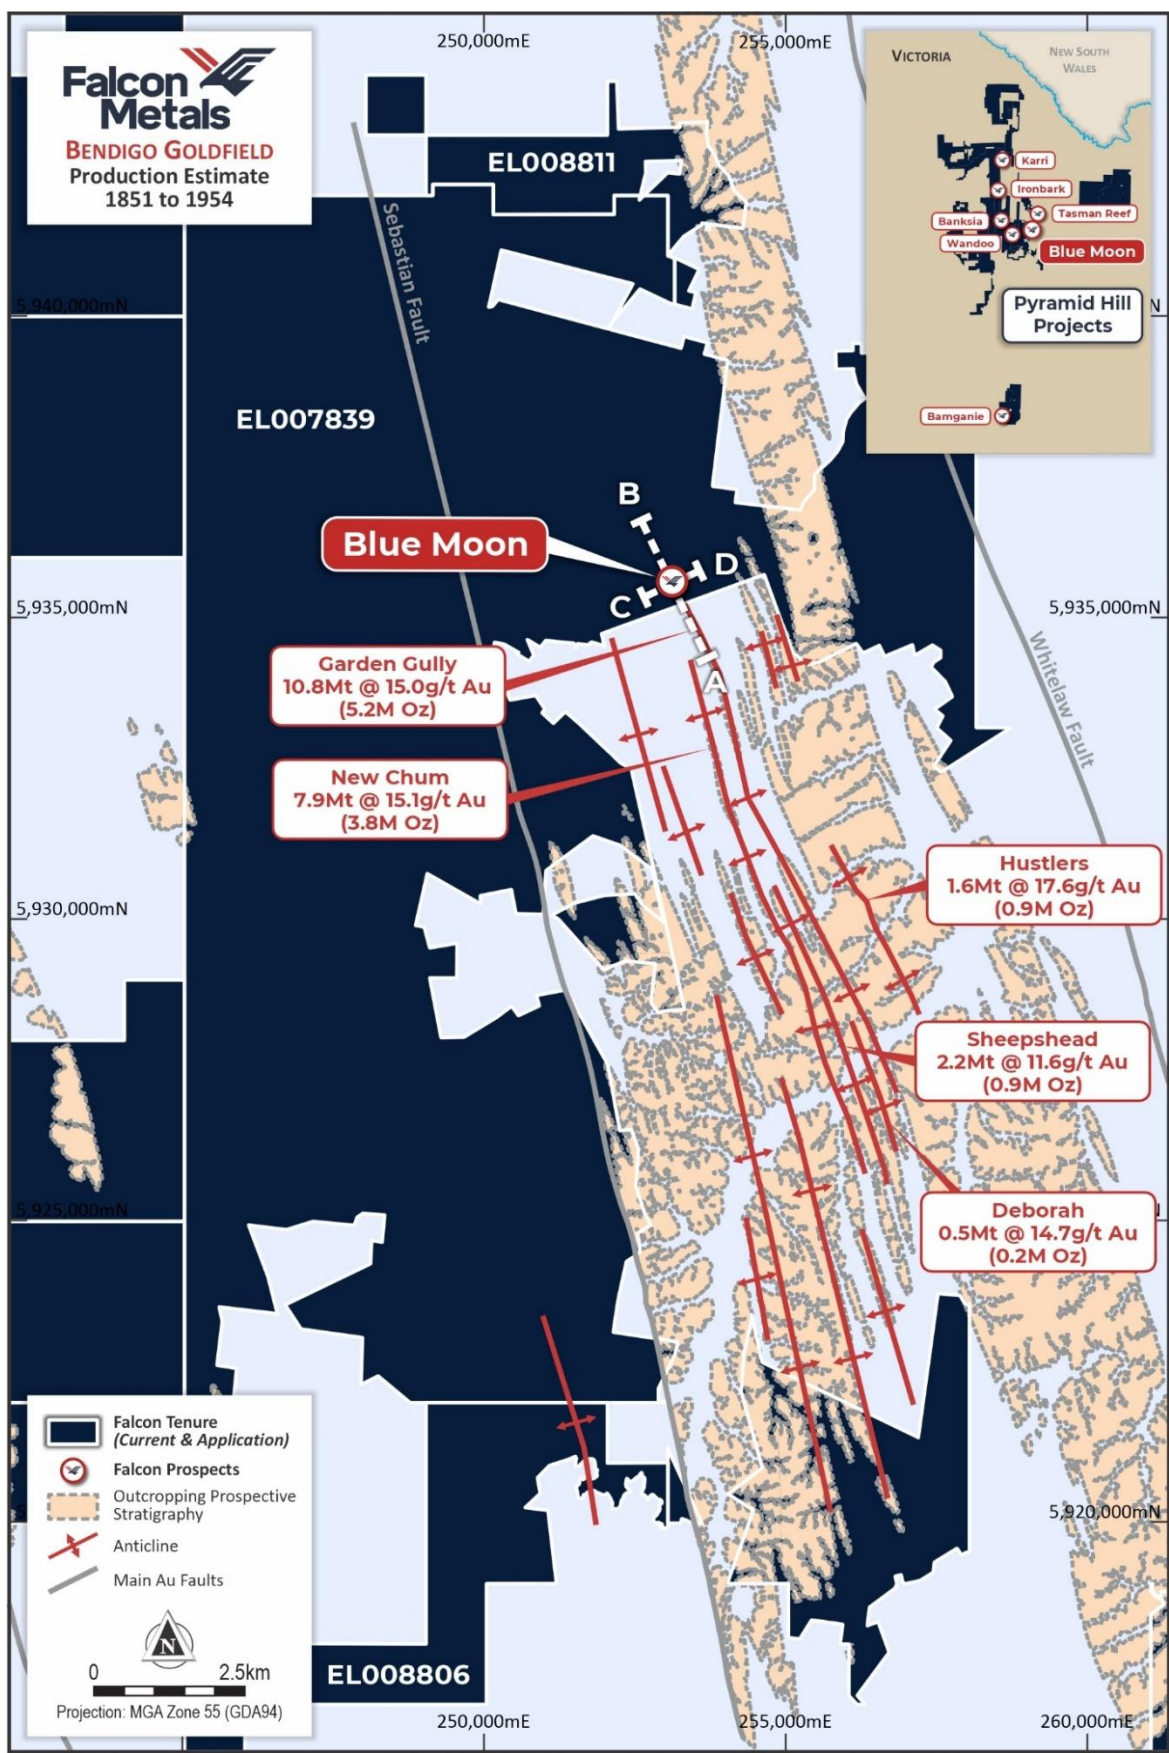

Figure 2 Bendigo Goldfield historical production^{1,2}

A significant amount of the mineralised reefs in the historical mines along the northern portion of the Garden Gully anticline came from smaller folds in the eastern limb, as well as associated faults, rather than exclusively from the main fold hinge saddle reef position. A schematic section of the mineralised reefs from the New Moon shaft, located approximately 520m south of Falcon’s EL007839 tenement boundary and one of the most productive reefs in the Garden Gully line, is shown in Figure 3. This highlights the various types of mineralised reefs that were mined, which include saddle, neck, leg and trough reefs, as well as spur veins associated with faulting. It also shows that narrow-laminated veins can be traced back to more prospective structures, where they intersect faults or folds.

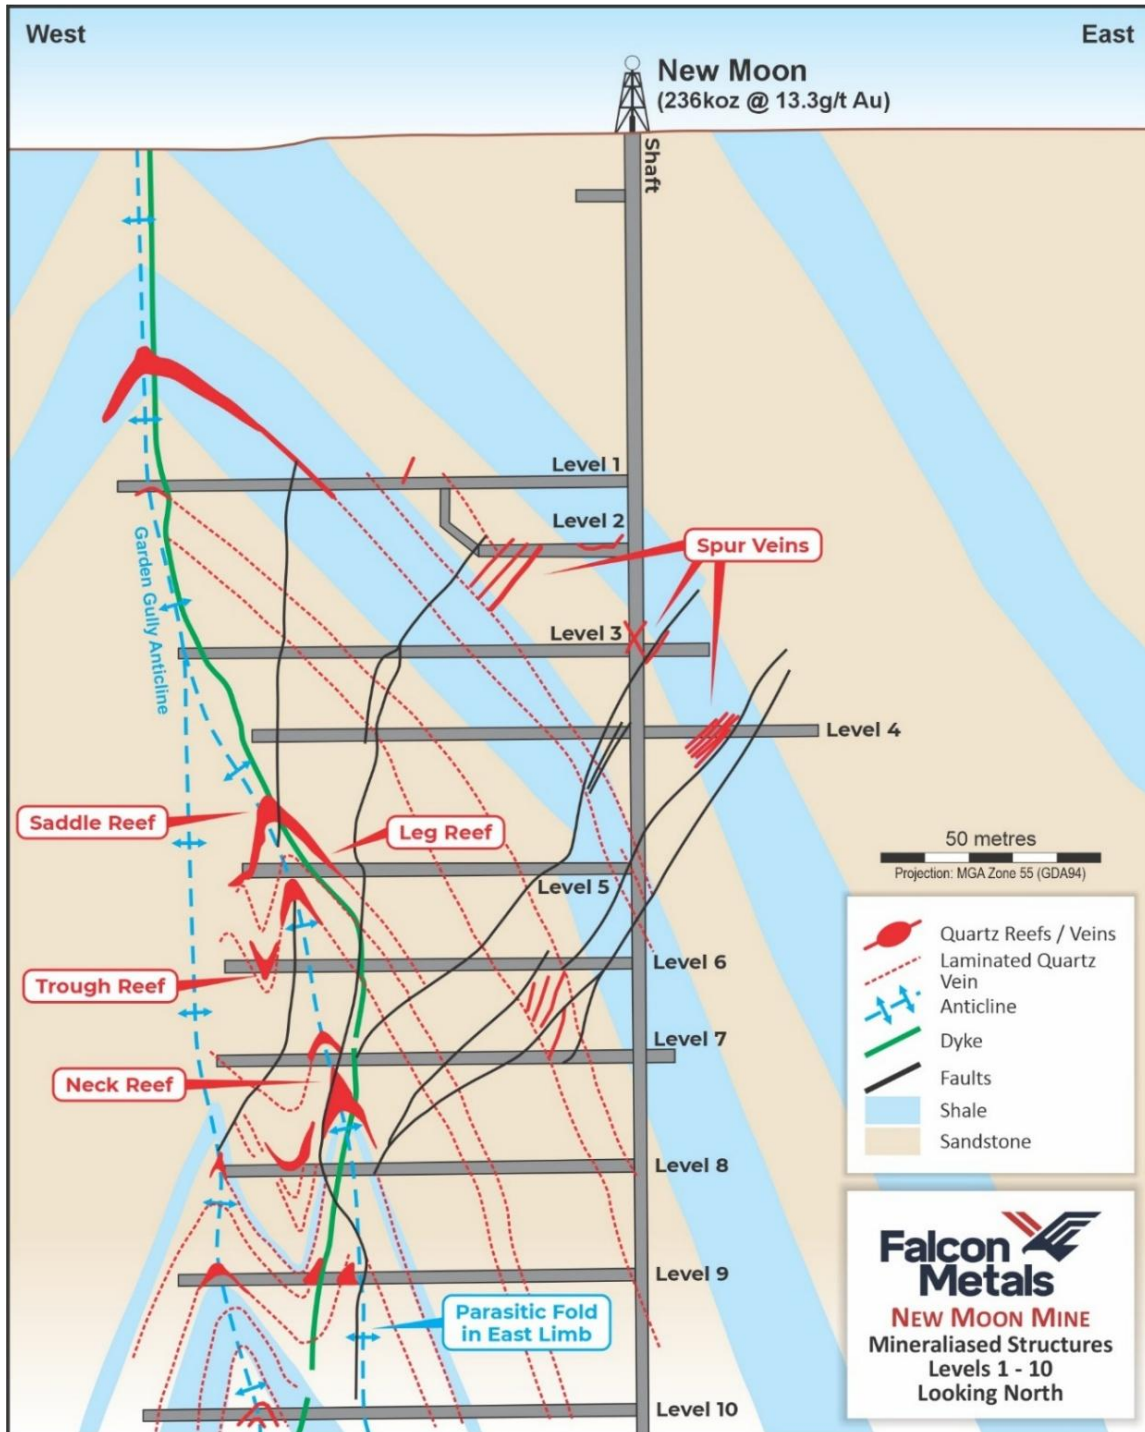

Figure 3 Schematic cross section showing interpreted quartz reef geometries (red) at New Moon shaft (approx. 520m south of Falcon’s Blue Moon tenement boundary) modified from New Moon Company Mine transverse section4

Highlights from drilling at Blue Moon to date include¹:

Morning Glory Zone:

- BMDD001** 2.8m @ 17.7g/t Au from 40.6m; including
- 0.9m @ 52.4g/t Au from 40.6m

Lotus Zone:

- BMDD001** 2.4m @ 8.4g/t Au from 600m; including
- 0.3m @ 48.7g/t Au from 600m; and
 - 0.3m @ 18.2g/t Au from 602.1m
- BMDD001W1** 1.2m @ 543g/t Au from 544.2m; including
- 0.6m @ 557g/t Au from 544.2m; and
 - 0.6m @ 529g/t Au from 544.8m
- BMDD001W2** 1.0m @ 4.6g/t Au from 446.0m
- BMDD001W3** 0.8m @ 4.1g/t Au from 557.0m
- BMDD001W4** 1.0m @ 3.9g/t Au from 540.0m
- BMDD003** 2.75m @ 41.9g/t Au from 605.3m; incl.
- 0.5m @ 222g/t Au from 607.55m

Dahlia Zone:

- BMDD001W3** 0.3m @ 185g/t Au from 773.0m
- BMDD001W6** 6.5m @ 33.0g/t Au from 832.0m; including
- 0.4m @ 325g/t Au from 832.6m; and
 - 0.5m @ 158g/t Au from 834.5m
- 3.4m @ 16.9g/t Au from 855.6m; incl.
- 1m @ 47.2g/t Au from 857m
- BMDD001W7** 1.2m @ 8.0g/t Au from 820.8m

New Results during the Quarter¹

All results from the remaining wedges from the first section at Blue Moon (BMDD001W08-011) and the first three holes on the second section (BMDD002, BMDD002W1 and BMDD003) were received as well as prioritised samples where visible gold was observed in BMDD004W1. All remaining samples from drilling during the quarter are pending (see cross section in Figure 4).

The Lotus Zone has now been confirmed with high-grade assays over a strike length of 280m and the Dahlia Zone confirmed over 200m, with both zones remaining open to the north.

Morning Glory Zone

BMDD004 and BMDD005 are both drilled from the same pad as BMDD001 and have targeted the along strike continuation of the shallow Morning Glory Zone where BMDD001 intersected 2.8m @ 17.7g/t Au from 40m¹ with assays pending from both holes.

For personal use only

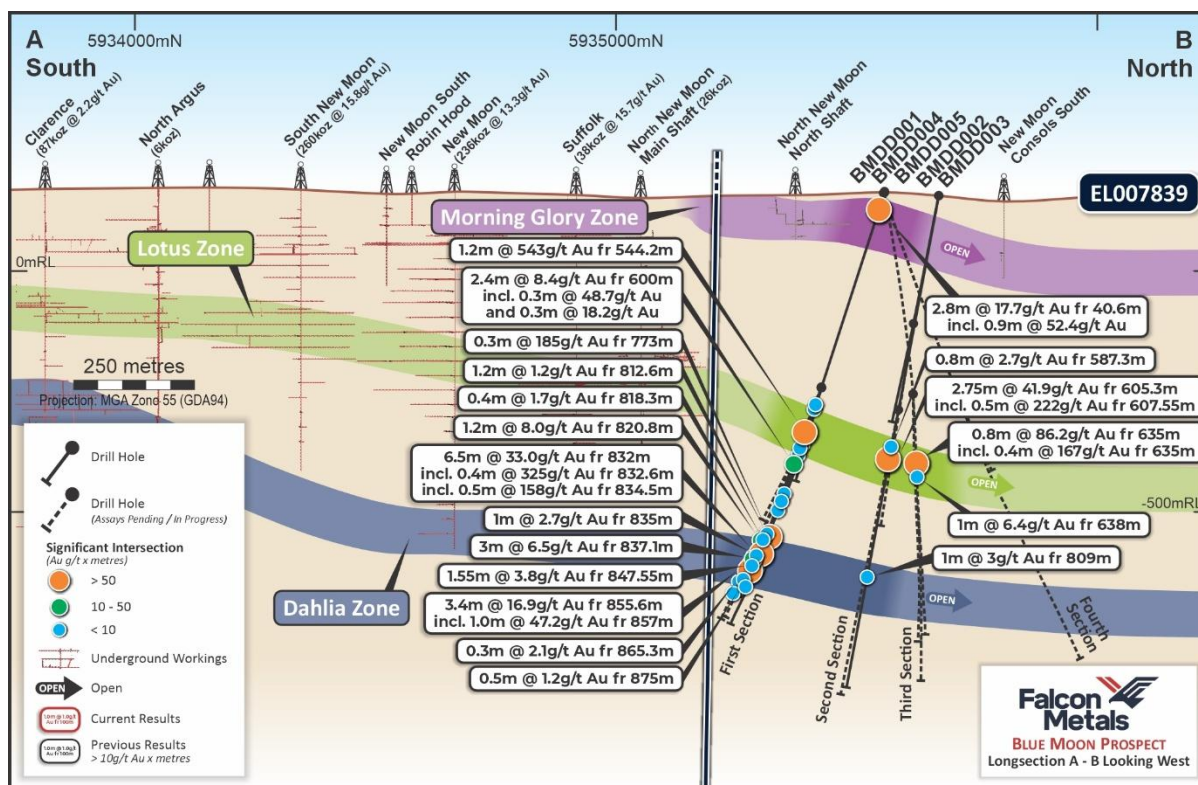

Figure 4 Long section of significant intercepts from the parent hole and wedge holes

Lotus Zone

Parent hole BMDD004, on the third northerly step out section drilled at Blue Moon, confirmed the position of the Garden Gully anticline, with results pending.

The first wedge hole, BMDD004W1, intersected visible gold at 635.3m, with samples from this interval prioritised for assaying (see visual gold at 635.4m in Figure 5 and core tray photo in Figure 6):

- BMDD004W1** 0.8m @ 86.2g/t Au from 635.0m; incl.
- 0.4m @ 167g/t Au from 635.0m

This high-grade result in the eastern limb is in a similar stratigraphic and structural position to the 1.2m @ 543g/t Au intersected on the first section (BMDD001W1), and the 2.2m @ 41.9g/t Au from 605.3m; including 0.5m @ 222g/t Au intersected in the second section (BMDD003). This highly prospective mineralised structure, now known as the Lotus Zone, has been confirmed in all three sections drilled to date over 280m, and remains open along strike (see cross-section in Figure 7).

The visible gold occurrence in BMDD004W1 is concentrated along a pyrite-rich stylolitic zone, within a larger quartz carbonate vein.

In the footwall to this vein was shale with disseminated pyrite and coarse arsenopyrite. This interval, 2.2m away from the high-grade intercept, was included in the prioritised assays:

- BMDD004W1** 1m @ 6.4g/t Au from 638.0m

Results were also received for hole BMDD003, above the previously reported result from the same hole (2.75m @ 41.9g/t Au from 605.3m incl. 0.5m @ 222g/t Au from 607.55m) which intersected the Lotus Zone as follows:

- BMDD003** 0.8m @ 2.7g/t Au from 587.3m

All other results from the Lotus Zone from the drilling during the quarter are pending.

Figure 5 Visible gold (red circle) at 635.4m in the Third Section - BMDD004W1

Figure 6 Significant intercept in the Third Section - BMDD004W1 with the prioritised samples from 605.3m (Note: significant intervals are calculated using a min. 1.0g/t Au lower cut-off grade and max. 2m internal dilution)

Figure 7 BMDD004 (Third Section) - schematic cross section looking north showing the intercept in the Lotus Zone

Dahlia Zone

The final results from the wedges in BMDD001 in the Dahlia Zone confirmed that the intensity of mineralised veining decreases as the structure approaches the fold hinge to the west on the first section (see cross-section in Figure 8). However, it remains open to the east of BMDD001W6 which was the highest grade and widest zone with visible gold in this structure (6.5m @ 33g/t Au from 832m).

BMDD003 confirmed the presence of the Dahlia Zone 200m to the north, close to the fold hinge (see cross-section in Figure 9). This is now being targeted further to the east in subsequent drilling that is presently underway.

Highlights from these assays include:

BMDD001W9	1.2m @ 1.2g/t Au from 812.6m 0.4m @ 1.7g/t Au from 818.3m 3.0m @ 6.5g/t Au from 837.1m; including <ul style="list-style-type: none">• 0.9m @ 9.2g/t Au from 837.1m; and• 1.3m @ 8.5g/t Au from 838.8m 1.55m @ 3.8g/t Au from 847.55m 0.3m @ 2.1g/t Au from 865.3m 0.5m @ 1.2g/t Au from 875m
BMDD001W11	1.0m @ 2.7g/t Au from 835m
BMDD003	1.0m @ 3.0g/t Au from 809.0m

Wedge holes BMDD001W8 and BMDD001W10 did not reach target depth due to significant deviation from plan and drilling conditions, with no significant assay results.

All other results from the Dahlia Zone from the drilling during the quarter are pending.

Next Steps

Drilling is ongoing with two diamond rigs currently drilling on the second section with BMDD003W6 and fourth section with BMDD005W1, a further 200m step out to the north from the third section, BMDD004. These holes will be followed by additional wedge holes if required, before commencing the next step-out drilling along strike to the north.

Figure 10 shows the planned drilling at Blue Moon for the initial 2km strike of the Garden Gully line of reef that is interpreted to extend for over 6km within the Blue Moon permit (EL007839).

Falcon continues to assess its land position and subsequent to the end of the quarter, EL008806 and EL008811 were granted. EL00811 is strategically positioned directly north of EL008739, providing an additional 1.5km of strike length over the interpreted extensions of the Bendigo Goldfield, including the Garden Gully and New Chum lines of reef.

EL008806 covers the southern extension of the Break O Day fault on the western margin of the Bendigo Goldfield.

Review work continues, with the Bendigo Goldfield now confirmed to extend into the Blue Moon permit (see Figure 10), including the prolific New Chum (3.8 Moz) and Hustlers (0.9 Moz) lines of reef, providing multiple future drill targets. A third rig has been confirmed for early May for an initial stratigraphic hole to test the New Chum anticline within EL007839.

Figure 10 Current progress and planned step out drilling to the north showing interpreted target zones

Pyramid Hill Gold Project (100% FAL & Macorna JV)

Falcon has over 4,000km² of granted permits in Victoria (see Figure 11), specifically targeting underexplored areas of the Bendigo Zone that is host to the high-grade historic 22 Moz⁵ Bendigo Goldfield and the 9 Moz⁶ Fosterville Gold Mine owned by Agnico Eagle (NYSE:AEM).

Regional Exploration Program

A planned 20,000m program of aircore drilling commenced in mid-January 2026 at priority targets under Murray Basin cover, including both infill and reconnaissance aircore drilling at the Loddon Vale Target and the first systematic reconnaissance aircore drilling to the north of Raywood on EL007840. The aircore phase of drilling is expected to be completed in mid-May 2026. Assays are pending for the aircore drilling program completed to date.

Victorian Mineral Sands Project (100% FAL)

Falcon has a strategic ground position north-west of Bendigo in the prospective Murray Basin mineral sands province, host to several large projects at the advanced development stage. In early 2024, Falcon discovered the high-grade Farrelly mineral sands deposit, which shows favourable mineralogical and processing characteristics.

Falcon continues to assess its options to achieve an amicable solution with the landowners at Farrelly in order to undertake the next phase of low impact exploration.

For personal use only

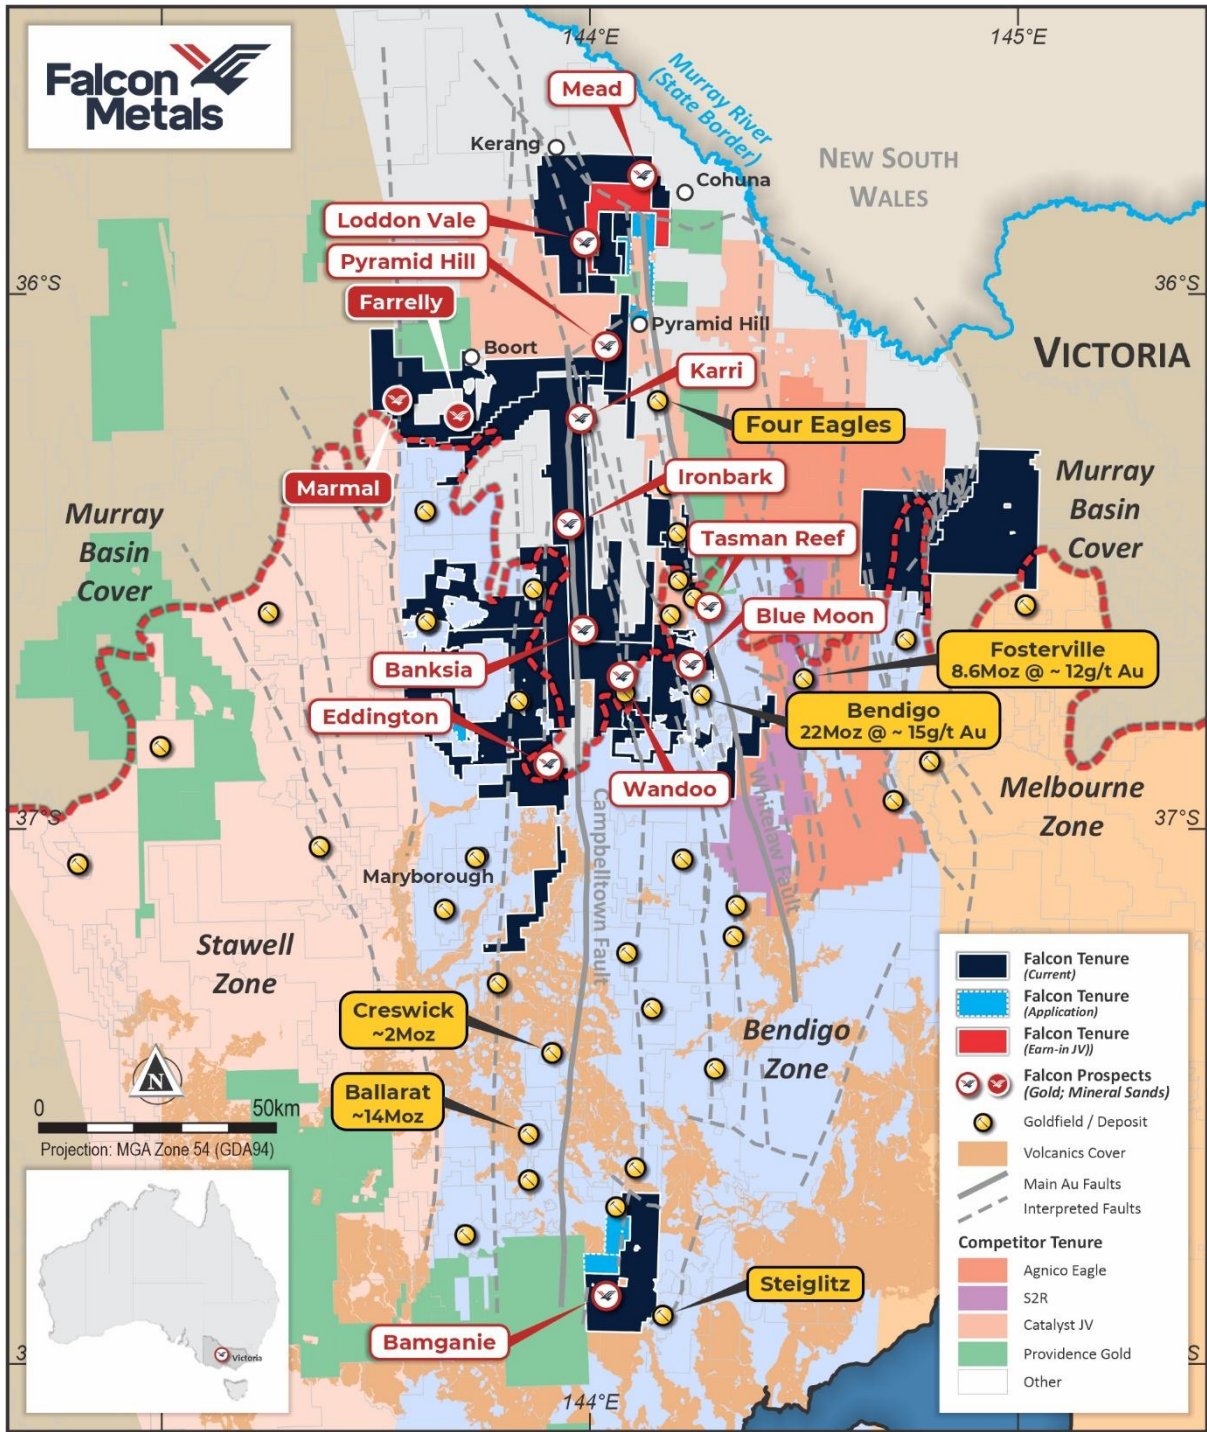

Figure 11 Falcon's Victorian tenements

Errabiddy Gold Project (Earning up to 70% plus 100%-owned application)

The Errabiddy Gold Project is a craton margin gold target, located 220km northwest of Meekatharra in Western Australia. Falcon is earning up to 70% of permit E09/2457 by spending \$2 million in 60 months in two stages. Falcon also has E09/2984, a 100%-owned application adjacent to E09/2457.

Planning is underway for a heritage survey to be undertaken followed by RC drilling of the most anomalous zones within the Olsen Well target.

The joint venture tenement and the adjoining 100% Falcon-owned application E09/2984 make up the Errabiddy Gold Project (see Figure 12), which is located along the northern margin of the Yilgarn Craton, 220km northwest of Meekatharra (see Figure 13).

The Olsen Well target is considered to be analogous to Benz Mining’s Glenburgh Deposit (16.3Mt @ 1.0g/t for 510,000 ounces of gold⁷), also discovered from regional stream sampling followed by soil sampling in gneissic terrain along the northwest margin of the Yilgarn Craton. Benz Mining has announced it has planned to drill 250,000m+ at Glenburgh in 2026⁸.

Next Steps

Subject to completion of a heritage survey, the first ever drilling program at Olsen Well is now targeted for the third quarter in 2026.

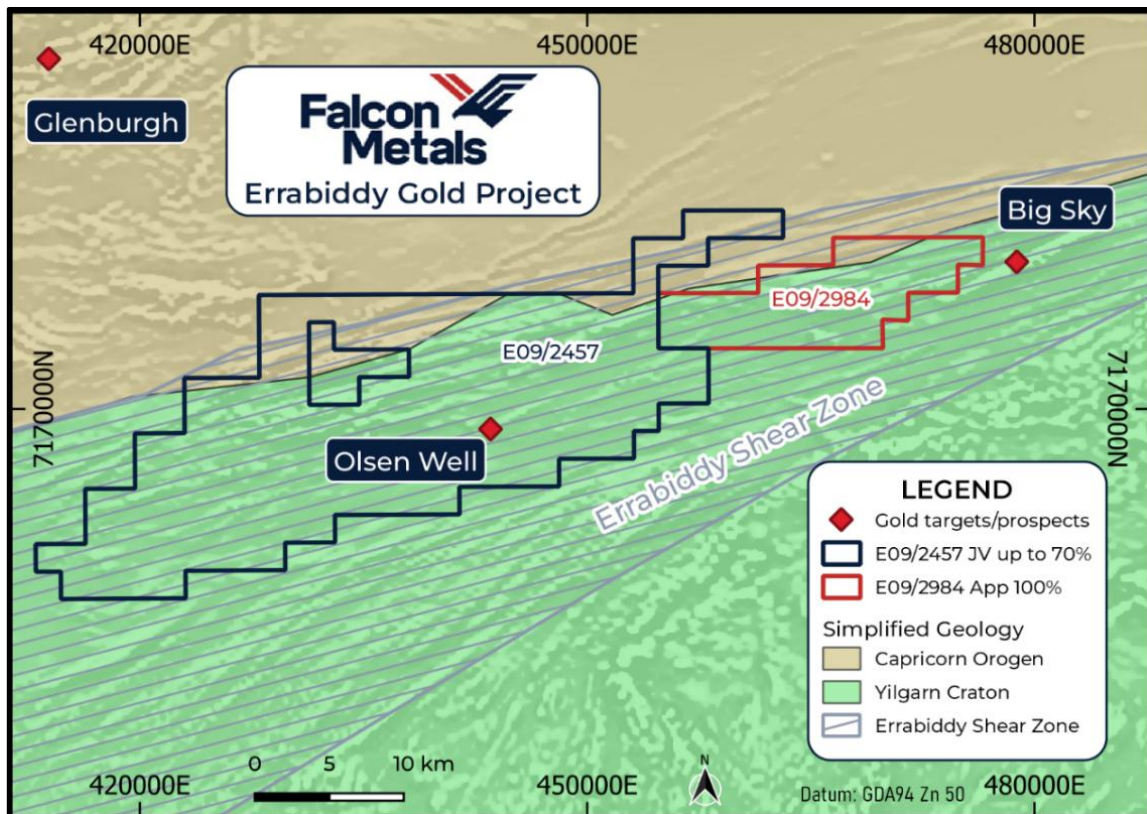

Figure 12 Errabiddy Gold Project tenements

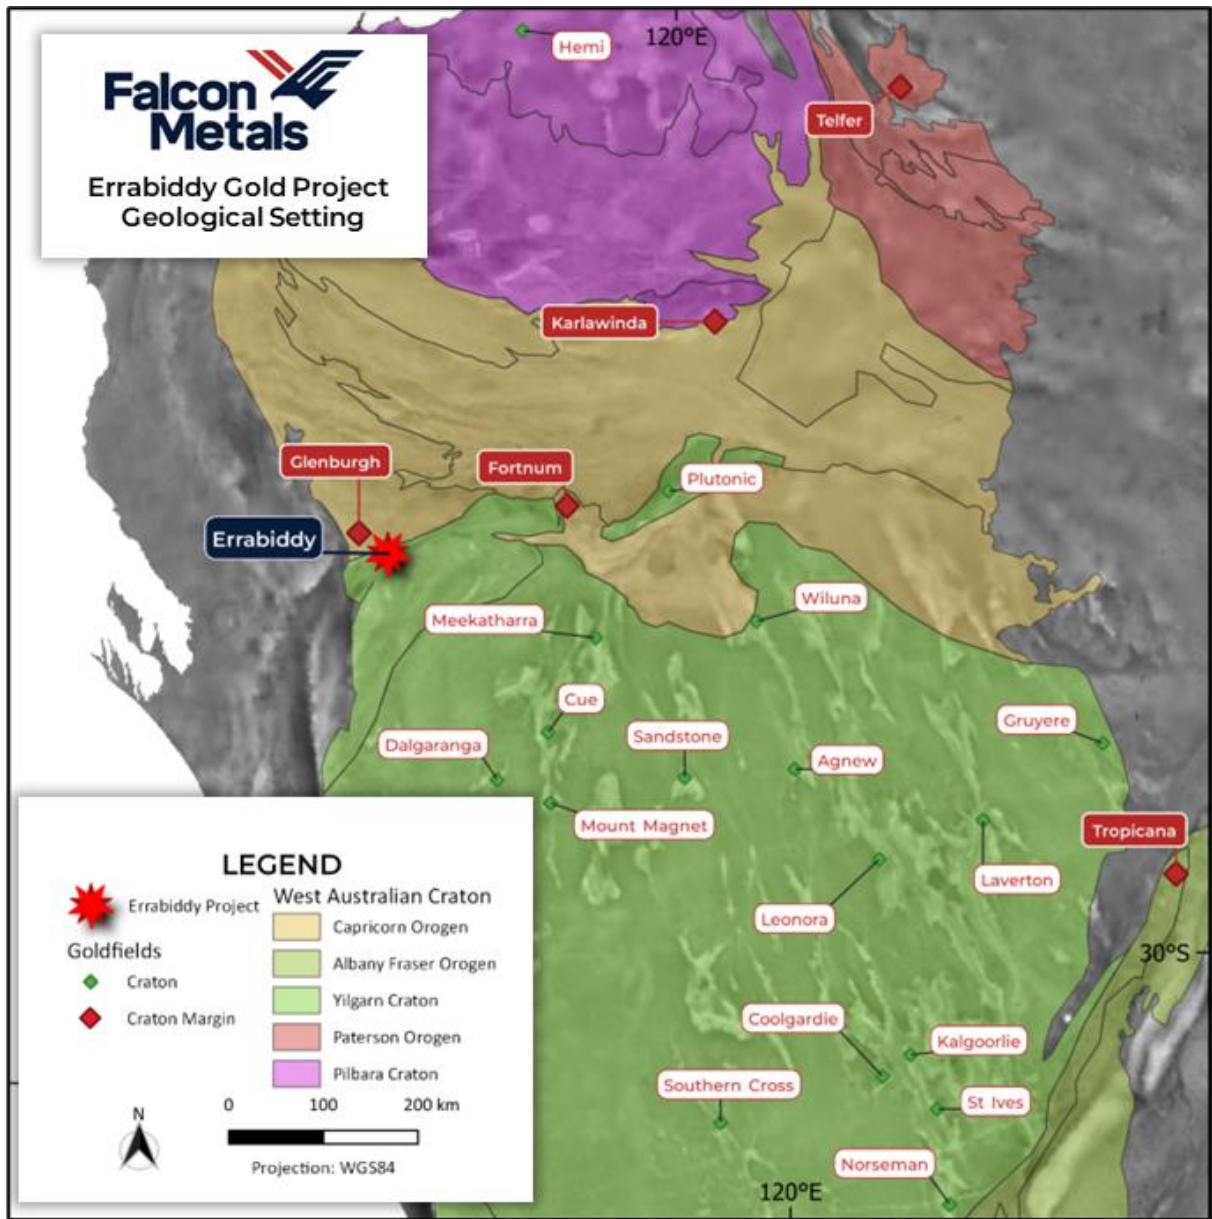

Figure 13 Geological setting of the Errabiddy Gold Project

Other Projects

Hawkstone (E04/2883 & application E04/2284 – 100%)

The Hawkstone Ni-Cu-Co Project is located in the emerging West Kimberley magmatic nickel province, along strike from IGO/Buxton’s JV Merlin and Dogleg Ni-Cu discoveries.

During the quarter Stavely Minerals Limited (ASX:SVY) informed Falcon it has withdrawn from the earn-in and joint venture agreement dated 26 March 2024. Falcon is in the process of reviewing its plans with respect to these tenements.

ASX ADDITIONAL INFORMATION

As per ASX Listing Rule 5.3.1: Exploration and Evaluation Expenditure during the Quarter was A\$3.1 million. Full details of exploration activity during the Quarter are set out in this report.

As per ASX Listing Rule 5.3.2: There were no substantive mining production and development activities during the Quarter.

As per ASX Listing Rule 5.3.5: There were payments of A\$0.13m consisting of director fees to related parties of the Company and their associates during the Quarter.

This announcement has been approved for release by the Board of Falcon Metals.

8.7 Estimated quarters of funding available (item 8.6 divided by item 8.3)	6.0
<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: N/A	
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: N/A	

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer: N/A

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 24 April 2026

Authorised by: By the Board of Falcon Metals Ltd
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
