Nico Resources Limited ("**Nico**" or the "**Company**") is pleased to present a summary of activities for the quarter ended 31 March 2026.

The Wingellina nickel-cobalt project in Western Australia ("**Wingellina**" or the "**Project**") is a world-class oxide-type nickel cobalt deposit which hosts an initial reserve of 1.56 million tonnes of contained nickel capable of producing approximately 40,000t of nickel and 3,000t of cobalt annually in a Mixed Hydroxide Precipitate ("**MHP**") for at least 42 years. A detailed pre-feasibility study<sup>1</sup> ("**PFS**") completed on the Project in December 2022 confirmed a globally significant Tier 1 asset, characterised by its long life, low cost and high operating margins.

The nickel price, after trading in a narrow range around US\$15,000/tonne for the most of 2025, rallied strongly from a low of US\$14,110/tonne in mid-December 2025 to US\$18,750/tonne in late January 2026. This price rally follows an announcement by the Indonesian government that it would enforce a reduction in nickel ore supply in 2026 through the reduction in ore mining quotas (RKAB's) issued in 2025 to a reported 260Mt in 2026. In late March the Indonesian government announced an export tax on nickel which is intended to further regulate supply and encourage downstream processing. The nickel price is currently around US\$17,000/tonne which reflects cautious investor sentiment and a structural tightness in the market which has emerged following the reduction in output from Ambatovy and Moa Bay. Following hostilities in the Middle East the supply of sulphur may also have a serious impact on Indonesian MHP production and potentially may result in the market moving to a deficit in 2026.

The cobalt price remained relatively flat over the quarter and is currently trading around US\$56,000/tonne.

The developments during the March quarter are discussed in more detail below.

## KEY HIGHLIGHTS

- Completed capital raising with the issuance to professional and institutional investors of 12.4 million ordinary fully paid shares at a price of \$0.30 per share to raise \$3.73 million (before costs).
- Planning and approvals for the proposed infill drilling program progressed in the Quarter and the Company was awarded the required clearing permit at the end of March following delays in their assessment timeframes for Clearing Permits.
- A review and interpretation of the metallurgical data from the extensive bench scale testwork conducted at ALS continues to be reviewed with the objective of optimising the proposed flowsheet and maximising project value.
- Work continues on the geo-metallurgical model to optimise the mining schedule.

<sup>1</sup> See ASX Announcement 22 December 2022 "PFS confirms Wingellina as a Tier 1 project capable of supplying decades on Nickel and Cobalt".

## QUARTERLY ACTIVITIES

Nico Resources Limited (“Nico” or the “Company”) is pleased to present a summary of activities for the quarter ended 31 March 2026.

### WINGELLINA MATERIAL TYPE AND GEOMETALLURGICAL MODEL - PHASE 2 PROGRESS

#### Introduction

The 2024 Wingellina Mineral Resource Estimate (MRE) within the limits of drilling information, and within the envelope of nickel mineralisation at a cut-off of 0.4% Ni, is **187.3Mt at 0.91% Ni and 0.06% Co for 1.7Mt** of contained nickel metal as shown in Table 1 below.

Classification	Tonnes (Mt)	Ni (%)	Ni metal (Kt)	Co (%)	Co metal (Kt)
Indicated	164.1	0.93	1,531	0.06	98
Inferred	23.3	0.72	166	0.03	7.3
<b>Total</b>	<b>187.3</b>	<b>0.91</b>	<b>1,698</b>	<b>0.06</b>	<b>106</b>

Note:

- Heritage Exclusion areas have been excluded from the MRE.
- Minor discrepancies may occur due to rounding of appropriate significant figures.

**Table 1. 2024 Wingellina Nickel-Cobalt Project MRE**

Nico has, in collaboration with ERM, continued to progress the development of a geometallurgical model for the Wingellina project. Phase 1 of the work has been completed and Phase 2 of the work is underway which includes the development and commencement of an additional infill drilling and sampling campaign to:

- Provide additional samples for bench scale variability testwork for material types not well-represented in previous testwork, and to substantiate the properties of material types that have already been subject to metallurgical testwork;
- Gain a greater understanding of the local variability, particularly of high-grade areas, to support conversion of Indicated resources to Measured; and
- Increase the density data coverage to support conversion of Indicated resources to Measured.

Phase 3 is the development of a detailed geo-metallurgical model based on the outcome of Phases 1 and 2 including parameters defined from historical and future bench-scale metallurgical testwork. The geometallurgical model will determine the processing characteristics of all material types and will assist in mine planning and scheduling to optimise the development of the orebody and maximise value from the Wingellina Project under various macroeconomic assumptions.

The Wingellina MRE by regolith type is shown below in Table 2.

**Classified Resource for Wingellina Nickel-Cobalt Project, 0.4% Ni cut-off, by Regolith Zone**

Regolith Zone	Tonnes (Mt)	Ni (%)	Co (%)	MgO (%)	Fe <sub>2</sub> O <sub>3</sub> (%)	SiO <sub>2</sub> (%)	Al <sub>2</sub> O <sub>3</sub> (%)	MnO <sub>2</sub> (%)	CaO (%)	LOI (%)	Sc (ppm)
Limonite	142.6	0.96	0.06	2.1	47.1	17.2	12.6	1.2	0.7	14.2	55
Transitional Limonite	18.6	0.77	0.04	7.1	21.6	42	8.9	0.6	3.2	13.4	29
Saprolite	26.1	0.68	0.02	11.8	16.6	37.5	8.4	0.4	6.1	17	31
<b>Total</b>	<b>187.3</b>	<b>0.91</b>	<b>0.06</b>	<b>4.0</b>	<b>40.3</b>	<b>22.5</b>	<b>11.7</b>	<b>1.0</b>	<b>1.7</b>	<b>14.5</b>	<b>49</b>

Note:

1. Heritage Exclusion areas have been excluded 2. Minor discrepancies may occur due to rounding of appropriate significant figures.

**Table 2. 2024 Wingellina Nickel-Cobalt Project MRE comparison by Regolith**

### Planned Detailed Infill Drilling

Approvals to facilitate the execution of the planned drilling were progressed in the March Quarter and final approval for a Native Vegetation Clearing Permit was awarded by DMPE at the end of March following delays in DMPE's assessment timeframes. A work proposal was previously submitted to the Ngaanyatjarra Council in July 2025. Preliminary feedback has been received from the Ngaanyatjarra Council and a meeting was held during the quarter with the NG Council to progress the required consultation with the Traditional Owners and facilitate the commencement of the infill drilling program.

The Ngaanyatjarra Council's view was that an archaeological assessment was required prior to the commencement of the infill drilling program. The Company disagrees with the Council's view and the Company's opinion is supported by the terms contained within the Wingellina Project Agreement whereby the area within E69/535 subject to the proposed infill drilling program has been previously cleared. The ethnographic and archaeological surveys supporting the area in question were previously undertaken and approved by the Ngaanyatjarra Council in consultation with senior Traditional Owners. These heritage clearance surveys were completed after extensive consultation with the Traditional Owners and as a prerequisite ahead of the negotiation and execution of Wingellina Project Agreement. A number of drilling programs have also been undertaken on the area including recent programs completed in 2019 and 2022. A community meeting with the Traditional Owners is scheduled for May prior to the commencement of the infill drilling program.

The Company has planned an infill drilling program on a staggered 50m x 25m grid across the main areas of mineralisation in the South Domain with the aim of tightly defining the geological model by identifying the contacts between the mineralised ultramafic and largely unmineralised gabbro. Samples generated will also be subject to additional metallurgical testwork and the data generated used to populate the geo-metallurgical model. The proposed program now consists of 94 RC drillholes for 6062 metres of drilling in the South Domain. Further infill drilling is also planned in the Central and Northern Domains.

Two key pieces of feedback provided in a gap analysis conducted as part of the resource update process by ERM (formerly CSA) in 2024 were that:

For personal use only

- A relative high proportion of older, open-hole drill data is being used in resource estimation. The validity of RAB drilling has been verified by twinning with more recent RC drilling, however it would be best practice to supersede this drilling during the proposed infill drilling program.
- A lack of density data was identified as the main factor that prevented areas with appropriate drill coverage from being classified as Measured Resources. Regular infill drilling of key parts of the Wingellina orebody will provide the opportunity to fill this knowledge gap via downhole density determinations and update the Resource status from Indicated to Measured.

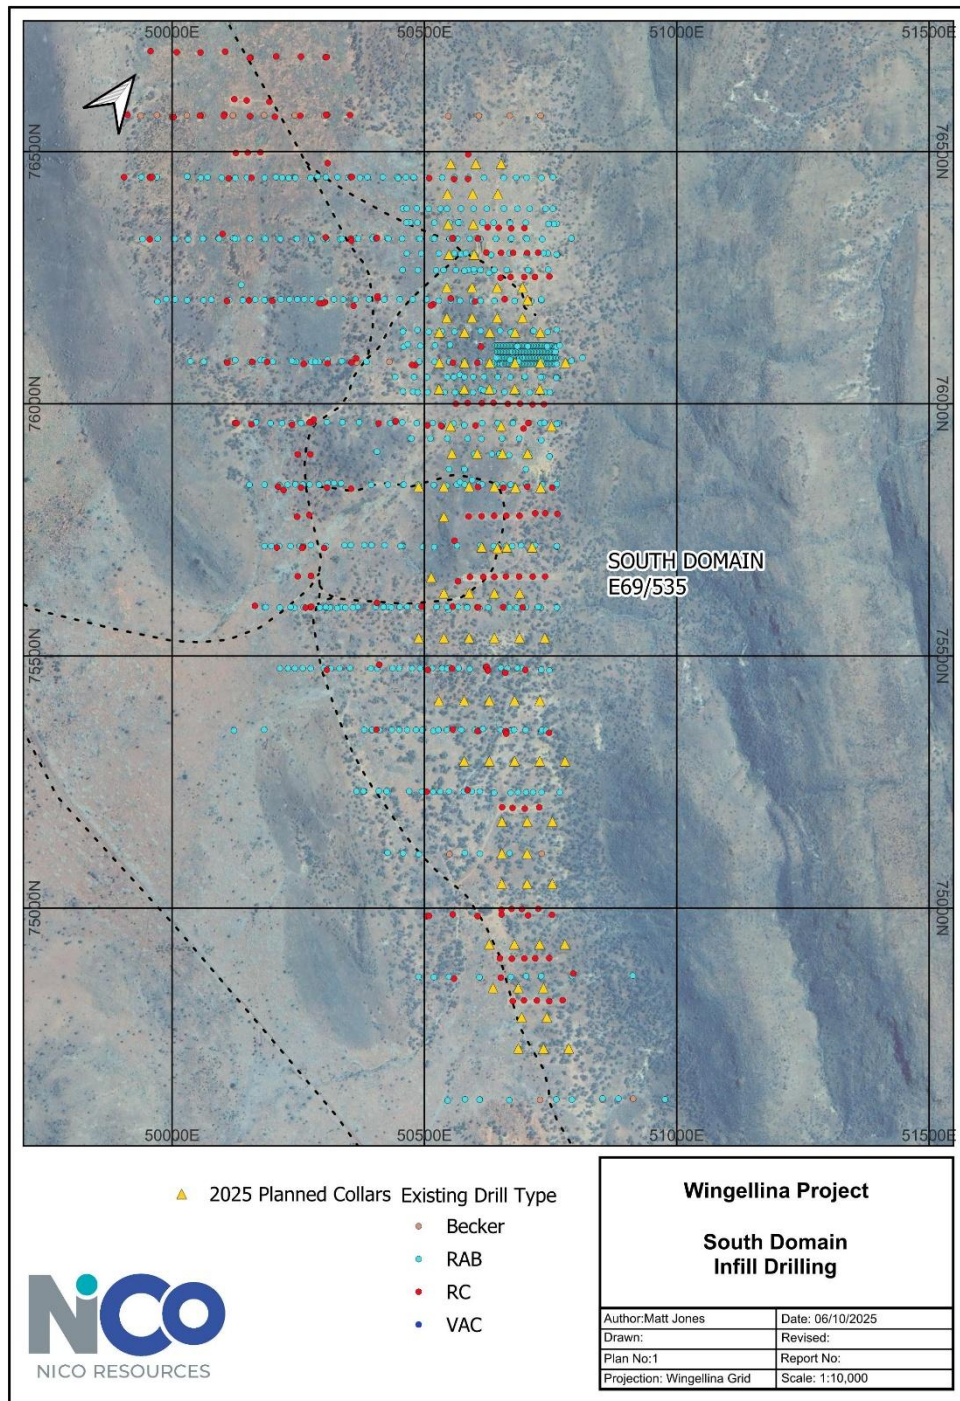

Figure 1 shows the location of the existing holes across the orebody and Figure 2 shows the location of existing holes and the planned infill holes in the South domain of the Wingellina orebody.

**Figure 1. Wingellina Existing Resource Drilling**

For personal use only

For personal use only

**Figure 2. Wingellina South Domain RC Infill Drilling**

In preparation for drill planning, an infill grid was designed to cover the deposit at approximately 25-30 metre coverage along strike and adjusted where necessary to fit in the variable lines of existing drillholes. A total of approximately 200,000 metres of additional RC drilling would be required to drill the Wingellina Deposit to a nominal 25m x 25m spacing, which would be sufficient to convert all resources to a Measured classification (along with additional density data collected in the process). Nico is working on strategically phasing this work, focusing on the higher-grade areas of the resource that are likely to fall into the first 10 years of operation.

In conjunction with the infill drilling, a program of downhole density holes is being scoped out to provide representative coverage of density in the regolith across the Wingellina deposit. This information is required to upgrade a proportion of the Mineral Resource from Indicated to Measured category by providing a better local estimate of tonnes within the regolith. The geology and material type model created will help ensure all lithologies are well represented in the density data collection process. ERM has recommended that at least 10% to 15% of the RC drill holes have density data collection across the deposit.

Following discussions with the Company's supplier, Recharge Petroleum, the Company does not, at this stage, foresee any issue with accessing the required diesel supplies for the upcoming program. Following the commencement of hostilities in the Middle East, the Company received a delivery of diesel in mid-March which filled the storage capacity at site and should be sufficient to cover the expected usage for the first stage of the upcoming program although further supply will be required for power generation at the exploration camp.

### **Next Steps**

Nico will continue to progress the work streams as outlined above. The next steps will be to progress the infill drilling safely to a high technical standard. This infill program is anticipated to extend for a number of months and will provide samples for metallurgical testwork and further define the orebody so that the resources can be updated to measured status. Local scale variability will also be identified and large scale metallurgical testwork results will aim to further refine and simplify the final material types for processing. Final ore types should display similar physical and rheological behaviour during the process flow. With the aim being to optimize the recoverable metal product by considering factors such as:

- Recovery;
- Upgrade;
- Geochemical mix (proxy for the mineralogy);
- Hardness and grindability; and
- Acid consumption.

### **Wingellina PGE Potential**

During the March Quarter, Nico continued to explore opportunities that may exist within its existing tenure. This included a preliminary review of PGE potential based historical data and interpretation. The outlook for the Platinum Group Element (PGE) market is strong with industrial demand and supply deficits expected to support prices moving forward. Following the completion of this review Nico may undertake further exploration of the PGE potential including a drilling program to provide additional data on the potential endowment.

Exploration at Wingellina has focused on supergene nickel/cobalt-rich limonitic mineralisation developed over laterally extensive basal ultramafic lithologies of the Giles Complex. This has resulted in the definition of a world class nickel laterite resource. As previously identified, the Giles Complex also has potential for economic PGE mineralisation. This potential has had early-stage investigation but remains to be extensively tested.

Limited drilling to date has tested beyond the nickel and-cobalt mineralised supergene zone. Previously diamond drillholes completed between 2001 to 2004 have identified anomalous copper, platinum and palladium which warrant follow-up.

Nico are committed to developing the Wingellina nickel/cobalt laterite resource but, will continue to identify and assess potential value-add opportunities internal and external to its current tenement holdings such as further cost-effective PGE exploration.

## WINGELLINA METALLURGICAL TESTWORK

The recent metallurgical testwork programs undertaken have significantly contributed to the ongoing development of the Project and are an important component of the preparatory work required to progress to a Definitive Feasibility Study (“DFS”). The processing flowsheet consists of ore scrubbing and beneficiation, HPAL, neutralization, CCD, two-stage secondary neutralisation for iron and aluminium impurity removal, MHP precipitation, tailings neutralization and storage. The testwork generated the following relevant information for the DFS:

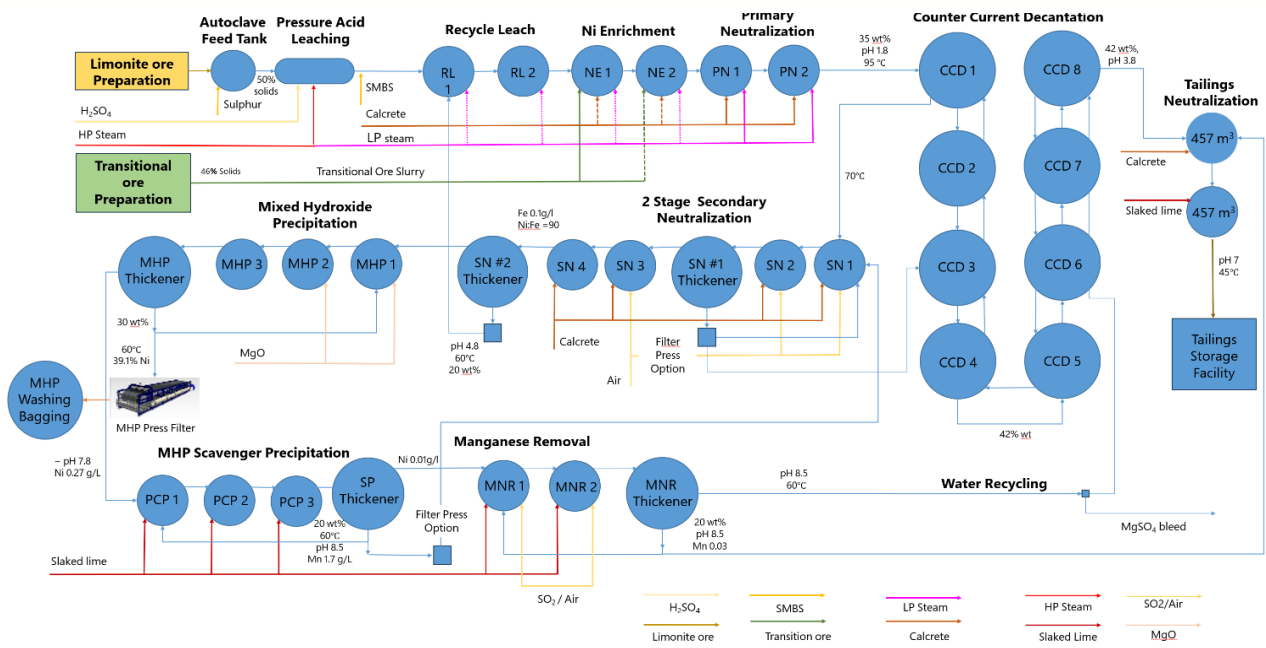

- Metal recovery data;
- Stream composition data and physical property data (including rheology);
- Bulk solids materials handling properties;
- Key equipment sizing data;
- Materials of construction data;
- Reagent consumption and waste composition data; and
- Product specification and purity.

### *Summary of Activities*

The Wingellina HPAL flowsheet showing major metallurgical processing steps within the nickel extraction process is shown below in Figure 3. Additional metallurgical testwork will be undertaken to ensure an efficient process design, maximisation of metal recovery, reduction of operating costs, enhancement of value leading to a mitigation of risks across the whole of the Wingellina orebody.

Metallurgical testwork and further assessment completed during the quarter has indicated that an upgrade in nickel head grade of around 10% can be achieved through the rejection of the coarse fraction in the ore preparation circuit. The rejection of the coarse fraction also rejects many of the acid consuming elements.

**Figure 3. Wingellina HPAL flowsheet**

**Comments on the Nickel Market**

The nickel market in the March quarter experienced increased volatility following a period of relatively subdued prices in the 2005 calendar year where prices remained relatively flat and traded in a range around US\$15,000. The price fluctuated in the US\$16,800 to US\$18,800 per tonne range before stabilizing around US\$17,000 by quarter-end. Monthly averages declined from US\$17,768 in January to US\$17,173 in February and US\$17,076 in March, reflecting softening demand and rising inventories.

The rally in the nickel price from mid-December through to late January was primarily influenced by potential Indonesian Government Policy changes notwithstanding a continued oversupplied market and broader macroeconomic pressures. In December 2025, the Indonesian government indicated that to regulate supply and support prices, it planned to reduce nickel ore mining quotas (RKABs) to around 260 million wet tonnes of ore in 2026. There remains an element of uncertainty over actual outcomes but the initial notification to PT Weda Bay Nickel of a 2026 production and sales quota of 12 Mwmt from 42 Mwmt allocated previously in 2025 sends a strong signal on the Government’s intention to manage market balance. The net impact of the proposed reduction in RKAB’s would be to reduce the projected surplus from around 260 kt to below 100 kt affectively stopping the rise in inventories and supporting prices at higher levels.

The recent policies enacted by the Indonesian Government, including the reduction in ore permits mentioned above, include:

- An increase in the royalty rates from 10% to variable rates of between 14% and 19% (dependent on the nickel price);
- Reducing the validity period of its mining permits (RKAB’s) from three years to one year;
- Seizing lands where nickel ore mining was underway that lack proper forestry permits; and
- Imposing sanctions on companies with missing reclamation and post-mining guarantees.

Subsequent to the end of the quarter, the Indonesian Government announced changes to its minimum selling prices for nickel ore from 15<sup>th</sup> April which raised the percentage of the nickel price payable (from 13% to 26% for

For personal use only

1.2% nickel ore) and also included payments for cobalt, chrome and iron content. The net impact for HPAL producers in Indonesia is a substantial increase in costs and, along with the recent increase in sulphur prices, is likely to result in a material increase in their break even prices.

Nickel production from Indonesia is forecast to increase further in the current year, albeit at a significantly slower rate than previous periods, and notwithstanding some short-term challenges, the long-term outlook remains promising underwritten by continuing strong demand growth and a slowing of production growth from Indonesia which may be further exacerbated by Indonesian Government intervention and input costs. As mentioned previously recent hostilities in the Middle East is having an impact on the supply and cost of sulphur to Indonesian HPAL plants (75% of sulphur for Indonesian HPAL operations is exported from the Middle East) which will reduce margins and has the potential to change the supply side dynamic and therefore metal prices.

In the short term, the nickel price is expected to remain extremely sensitive to changes in Indonesian Government policy and geo-political events. Over the long term, the nickel market is forecast to require an additional 1.5 million tonnes per annum of nickel by the early 2030's which will require a significant increase in prices from current levels to incentivise investment in new capacity.

## **ENVIRONMENTAL, SOCIAL AND GOVERNANCE**

### ***Environmental and Social Management System***

Nico has continued to develop its Environmental and Social Management System (ESMS) to align with international standards (ISO 14001).

### ***Health and Safety***

Health and safety remain of paramount importance for the company. Notably, there were no reportable incidents during this quarter, reflecting the effectiveness of the company's health and safety protocols.

### ***Stakeholder Engagement***

Nico continues to engage with stakeholders for the Wingellina Project in an open, transparent and collaborative manner.

As previously stated, in November 2024, the Company's Wingellina Project was awarded Major Project Status (MPS) by the Federal Government. This award recognises the national significance of the Wingellina Project in the development of Australia's critical minerals to assist in the global energy transition. The awarding of MPS provides Nico with access to the Major Projects Facilitation Agency, which will provide additional resources, including streamlining of regulatory approvals, to assist in the Project's development. Nico continued its engagement with the Major Projects Facilitation agency during the quarter and other Federal and State departments during the December quarter.

Nico's proactive engagement with various Government departments underscores the company's commitment to securing all the necessary approvals and support for the project's successful development.

The Cultural Heritage Management Plan ("CHMP") was completed during the March 2024 quarter and consultation with and review by Traditional Owners and the NGC is awaited.

Throughout the quarter, Nico continued to actively engage with stakeholders at both State and Federal levels of Government to advance and increase the understanding of the Wingellina Project. Nico is also continuously attempting to enhance the relationship with the NGC and the Traditional Owners which reflects a commitment to enhance the Traditional Owners livelihoods and make a positive and lasting difference. A Wingellina

community meeting is anticipated to be held in the current quarter to discuss the upcoming infill drilling program and other matters and an Implementation and Review Committee meeting is scheduled for July.

### **Governance**

Nico's is focussed on maintaining high standards of governance and transparency and a summary of Nico's sustainable development activities is also provided in its Sustainability Report (<https://nicoresources.com.au/sustainability/>).

### **Future Work Program**

As previously stated, Nico has determined that it is prudent in the current market conditions to reduce discretionary expenditure until market conditions improve. During the June 2026 quarter Nico plans to focus on the following activities:

- Commence the infill drilling program on the Wingellina resource to facilitate the upgrading of the indicated resource to measured category.
- Continue to review, analyze and interpret the bench scale testwork results.
- Advance the geo-metallurgical model for the Wingellina orebody to assist in identification of orebody variability and mine planning and scheduling following the additional information gained from the proposed infill drilling program.
- Continue to review greenfields exploration opportunities in the Musgraves region.
- Further planning for exploration and associated work on the Lewis calcrete deposit.
- Continue the required planning on the potential water supply from the Cobb Embayment in preparation for the drilling of additional bores.
- Progress engagement with other key stakeholders, including State and Federal Governments, the local community and the Ngaanyatjarra Council.
- Continue the scope and definition documentation for the DFS.

## CORPORATE AND FINANCIAL

### Financial

Nico closed the quarter with cash and working capital of \$5,422,263. Exploration and Evaluation expenditure during the quarter was \$87,215.

### Capital Structure as at 31 March 2025

#### Placement completed

Nico completed a heavily oversubscribed capital raising with firm commitments received from professional and institutional investors to raise \$3.73 million (before costs) by way of an issue of 12.4 million fully paid ordinary shares at a price of \$0.30 per share.

The shares were issued under a single tranche comprising of 12,435,846 new Securities to raise A\$3,730,754 utilising the Company's existing placement capacity in accordance with ASX Listing Rule 7.1A. and the issue price for the Placement shares was 30 cents.

3,000,000 unquoted options with an exercise price of \$0.644 expired during the period and were cancelled.

Description	Number
Fully paid ordinary shares	136,794,309
Unlisted Employee options (various) <sup>1</sup>	4,525,000
Unlisted Performance shares	2,500,000

#### Major Shareholders

The current major shareholders of the Company (as at 31 March 2026) are:

- Ajava Holdings Pty Ltd (P Cook) 10.70%
- Metals X Limited 6.75%
- Norfolk Enchants Pty Ltd 4.79%

#### Related Party Transactions

Related party payments for the quarter, are as outlined in the attached Appendix 5B at section 6.1, total \$113,666 and includes amounts paid to directors including director's fees and statutory superannuation.

***This announcement has been authorised for release by the Board.***

## ABOUT NICO RESOURCES LIMITED

**Nico Resources Limited** is an Australian company focusing on Australian nickel projects.

Nico owns a 100% legal and beneficial interest in nickel assets consisting of the Wingellina (WA) and Claude Hills (SA) nickel projects.

### Central Musgrave Project (CMP)

The CMP comprises three main exploration tenements - Wingellina (WA), Claude Hills (SA) and Mt Davies (SA) along with an Exploration Licence covering the Lewis calcrete resource and three Miscellaneous Licences covering the defined water resources.

The CMP consists of a package of tenements hosting nickel-cobalt-scandium lateritic Mineral Resources in excess of 200 million tonnes, containing 1.95 million tonnes of Nickel and 150 thousand tonnes of Cobalt along with a Probable Ore Reserve of 164.8 million tonnes containing 1.56 million tonnes of Nickel and 123,000 tonnes of cobalt.

The project tenure is approximately 1,469km<sup>2</sup> located within Western Australia and South Australia adjoining the Surveyor Generals Corner (the junction between Western Australia, the Northern Territory and South Australia).

Wingellina is one of the largest undeveloped nickel resources / reserves globally to underpin an independent Australian nickel producer.

The Wingellina deposit hosts a JORC (2012) defined Measured, Indicated and Inferred Resources of 187.3Mt at 0.91% Ni & 0.06% Co for 1.7Mt of contained nickel and 106Kt of contained cobalt and hosts a JORC (2012) defined Probable Reserves of 168.4Mt at 0.93% Ni & 0.07% Co for 1.56Mt of contained nickel and 123Kt of contained cobalt).

The Claude Hills deposit located less than 20km from Wingellina hosts a JORC (2004) defined Inferred Resources of 33.3 Mt at 0.81% Ni and 0.07% Co for 270Kt of contained nickel and 23Kt of contained cobalt.

## COMPETENT PERSON'S STATEMENT

### Exploration

The information in the report to which this statement is attached relates to Exploration Targets or Exploration Results is based on information compiled by Mr. M Jones, who is full time Employee of the company and also a Member of The Australian Institute of Mining and Metallurgy, with 20 years' experience in the mining industry. Mr. Jones has sufficient experience, which is relevant to the style of mineralisation and type of deposit under consideration and to the activity, which he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the "Australian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Jones consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

### Resources

The information in this report that relates to Mineral Resources is based on information compiled by Felicity Hughes. Ms Hughes is a Principal Consultant of ERM and is a Member of the Australasian Institute of Mining and Metallurgy. She has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity which Ms Hughes is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for the Reporting of Exploration Results, Mineral Resources, and Ore Reserves (JORC Code). Ms Hughes consents to the disclosure of information in this report in the form and context in which it appears.

### *Ore Reserves*

The information in this report that relates to ore reserves is based on information compiled by Mr Michael Poepjes, who was a previous employee of Metals X in 2016, a member of the AusIMM at the time and a "Competent Person". Mr Poepjes has sufficient experience that is relevant to the style of mineralisation and type of deposits under consideration and to the activity being undertaken to Qualify as a "Competent Person" as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Poepjes consents to the inclusion in this announcement of the matters based on his information and in the form and context in which it appears.

### **PFS CAUTIONARY STATEMENT**

The production target and forecast financial information derived from the production target referred to is based on 100% of the material form probable ore reserves. This includes all material modelled for the current mining schedule for Wingellina. There has been no modifying factors applied to the estimation as all of the material included in the study resides in the probable ore reserve category. The material assumptions used in the estimation of the production target and associated forecast financial information are set out in Table 2: Ore Reserve estimation for the Wingellina Project of the "Nico Resources Limited Technical Assessment Report of the Central Musgraves Nickel-Cobalt Project" prepared by CSA Global Mining Industry Consultants as part of the "Nico Resources Replacement Prospectus Initial Public Offer" dated 23 November as at 2021. The mineral resource and ore reserve estimates underpinning the production target were prepared by Competent Persons in accordance with the JORC Code 2012.

### **FORWARD-LOOKING STATEMENTS:**

This announcement contains certain forward-looking statements. Forward-looking statements are statements that are not historical and consist primarily of projections — statements regarding future plans, expectations and developments. Words such as "expects", "intends", "plans", "may", "could", "potential", "should", "anticipates", "likely", and "believes" and words of similar import tend to identify forward-looking statements. All statements other than those of historical facts included in this announcement are forward-looking statements, including, without limitation, statements regarding plans, strategies and objectives, anticipated production and expected costs and projections and estimates of ore reserves and mineral resources. Indications of, and guidance on future earnings, cash flows, costs, financial position and performance are also forward-looking statements. Forward-looking statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by such forward-looking statements. Such risks include, but are not limited to, exploration, development and operational risks. No independent third party has reviewed the reasonableness of any such statements or assumptions. None of the Company, their related bodies corporate and their respective officers, directors, employees, or advisers represent or warrant that such forward statements will be achieved or will prove to be correct or gives any warranty, express or implied, as to the accuracy, completeness, likelihood of achievement or reasonableness of any forward statement contained in this release. The Company does not undertake any obligation to release publicly any revisions to any forward-looking statement to reflect events or circumstances after the date of this announcement, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws. Recipients should form their own views as to these matters and any assumptions on which any of the forward statements are based and not place undue reliance on such statements.

### **PREVIOUS DISCLOSURE**

The information in this quarterly activities report is based on the Nico Resources Limited Prospectus and Pre-feasibility study, which are available from the Nico Resources Limited website [www.nicoresources.com.au](http://www.nicoresources.com.au) and the ASX website [www.asx.com.au](http://www.asx.com.au). The Company confirms that it is not aware of any new information or data that materially affects the information included in the Prospectus and that all material assumptions and technical parameters underpinning the Prospectus continue to apply and have not materially changed.

## Mining exploration entity or oil and gas exploration entity quarterly cash flow report

7. <b>Financing facilities</b> <i>Note: the term "facility" includes all forms of financing arrangements available to the entity. Add notes as necessary for an understanding of the sources of finance available to the entity.</i>	<b>Total facility amount at quarter end \$A'000</b>	<b>Amount drawn at quarter end \$A'000</b>
7.1 Loan facilities	-	-
7.2 Credit standby arrangements	-	-
7.3 Other (please specify)	-	-
7.4 <b>Total financing facilities</b>	-	-
7.5 <b>Unused financing facilities available at quarter end</b>		-
7.6 Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.		
<b>8. Estimated cash available for future operating activities</b>	<b>\$A'000</b>	
8.1 Net cash from / (used in) operating activities (item 1.9)	(777)	
8.2 (Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(94)	
8.3 Total relevant outgoings (item 8.1 + item 8.2)	(871)	
8.4 Cash and cash equivalents at quarter end (item 4.6)	5,422	
8.5 Unused finance facilities available at quarter end (item 7.5)	-	
8.6 Total available funding (item 8.4 + item 8.5)	5,422	
8.7 <b>Estimated quarters of funding available (item 8.6 divided by item 8.3)</b>	6.22	
<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>		
8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:		
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?		
Answer:		
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?		
Answer:		
8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?		
Answer:		
<i>Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.</i>		

## Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 28 April 2026

Authorised by: **The Board of Nico Resources Limited**

## Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
