

North Kalgoorlie Hub, WA – Drilling Update

Gorilla drills 9.3m @ 20.6g/t Au in new Sovereign discovery

- Significant intercept into a new high-grade footwall lode at the Sovereign Deposit, at the Comet Vale Gold Project in WA (part of the 1.2Moz @ 3.7g/t Au North Kalgoorlie Hub):
 - **9.3m @ 20.6g/t Au from 414.8m** in STEX172, brand new discovery.
 - The mineralisation occurs 50m into the footwall of the main lode at Sovereign, a largely untested position, and is visually very different from the mineralisation typically seen at Sovereign.
 - The scale potential of this new high-grade lode is currently under evaluation, noting that individual lodes at Comet Vale are typically continuous over many hundreds of metres both along strike and down-dip.
- Ongoing growth drilling at Sovereign continues to return quality, high-grade intercepts:
 - **4.2m @ 13.0g/t Au from 360.3m** in STEX163, and
 - **0.4m @ 11.2g/t Au from 321.4m** in STEX163
 - **2.3m @ 14.8g/t Au from 54.3m** in STEX158, and
 - **0.7m @ 12.5g/t Au from 316.2m** in STEX158
 - **6.1m @ 4.2g/t Au from 246.7m** in STEX139
 - **0.5m @ 36.9g/t Au from 266.8m** in STEX159
 - **1.9m @ 7.5g/t Au from 316.1m** in STEX160
- Drilling continues across all three Gorilla gold projects.

Gorilla Gold Mines Ltd ('Gorilla', 'GG8' or 'the Company'), is pleased to report the discovery of a significant new high-grade lode at the Sovereign Deposit, within the 100%-owned Comet Vale Gold Project, located 100km north of Kalgoorlie in WA. The Comet Vale Project forms part of the North Kalgoorlie Hub, which currently hosts 1.2Moz @ 3.7g/t Au and is expanding rapidly with ongoing drilling.

For personal use only

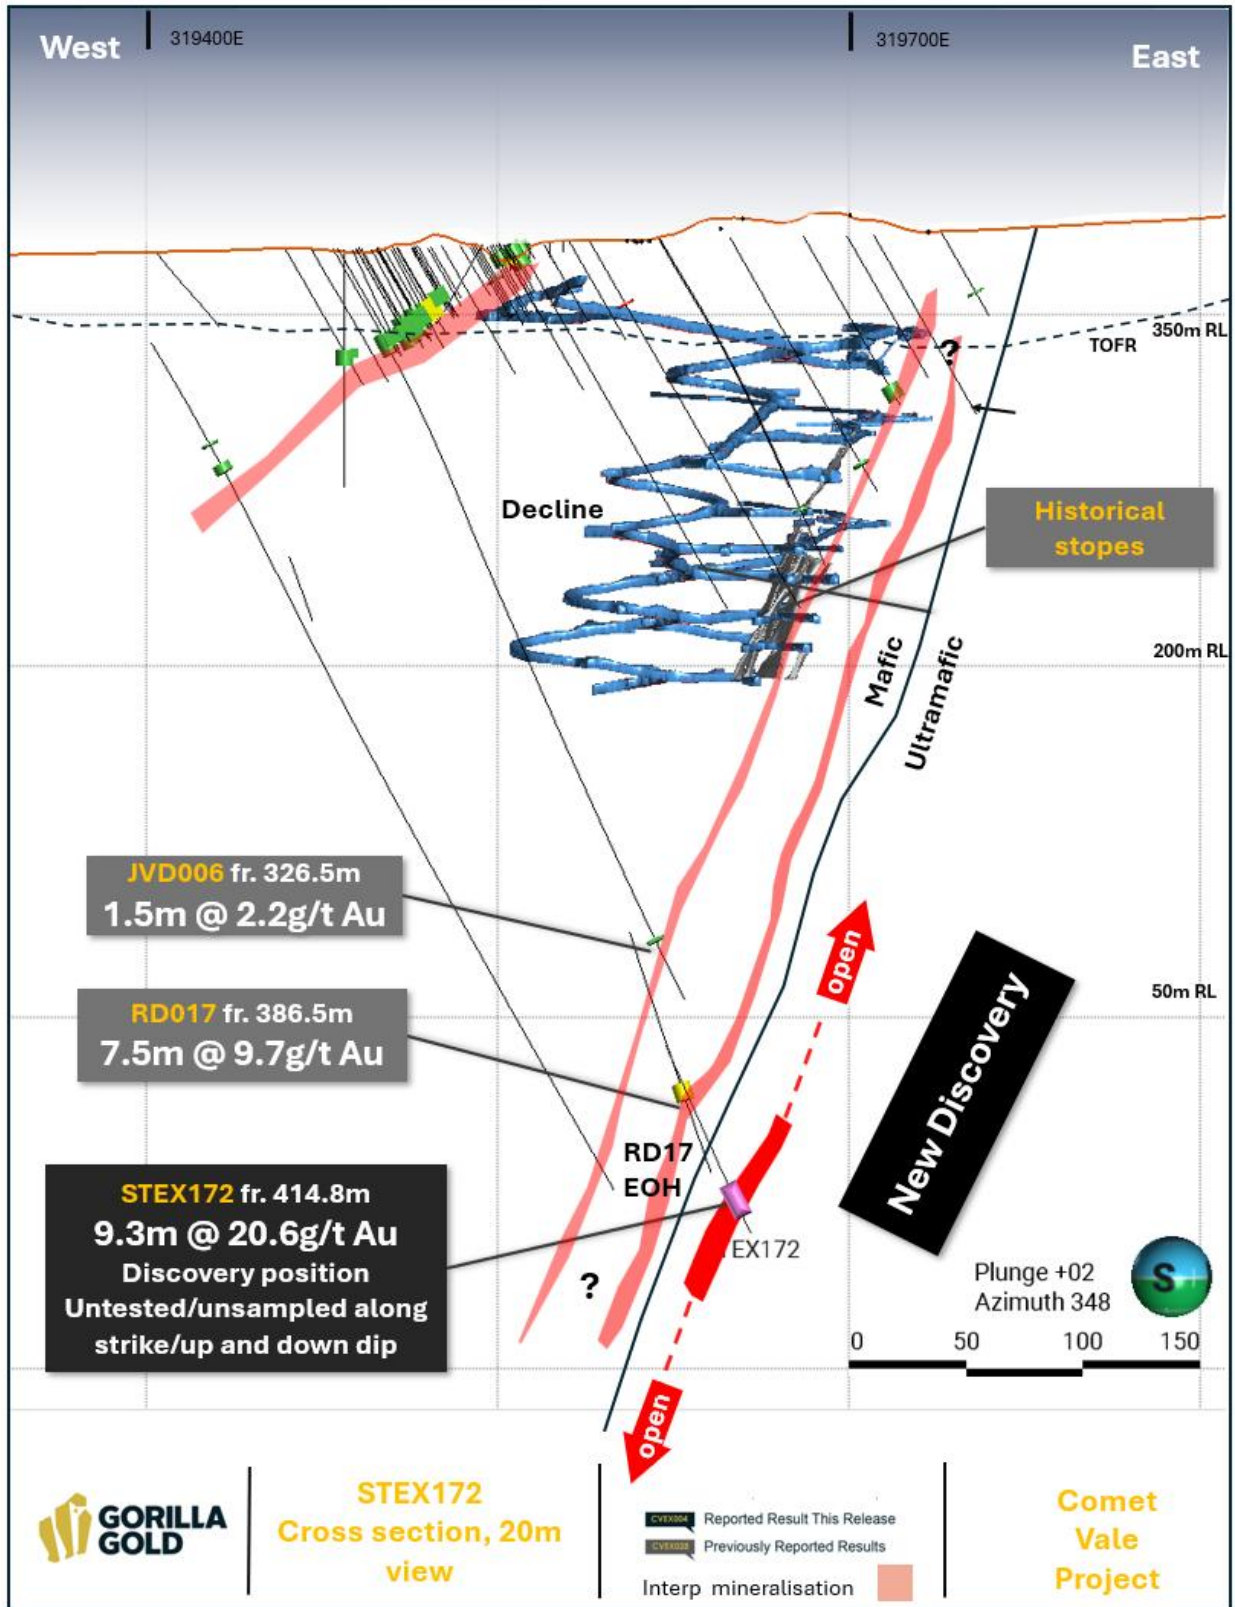

Figure 1. Cross Section showing new lode discovered at Sovereign

The discovery intercept, **9.3m at 20.6g/t Au from 414.8m**, was returned from ongoing growth drilling at the Comet Vale Project and represents a previously unrecognised mineralised position in the footwall of the Sovereign system.

Gorilla Chief Executive Officer, Charles Hughes, commented:

“This is a standout result, one of the best intercepts we’ve delivered at Sovereign, and it’s exciting to get this in a discovery hole in a new high-grade lode position that has seen very little effective drill testing.

“Importantly, this mineralisation is geologically distinct from the main Sovereign lodes – in fact, if it wasn’t for the presence of some very coarse gold, it could have been missed! There is no quartz veining and only a tiny amount of sulphides associated with the new lode, which means it would be very easy to overlook.

“The geological position of this new lode has previously been tested by a handful of holes along strike and up- and down-dip but has not been sampled.

“The host structures and stratigraphy associated with this mineralisation extend across the entirety of the Sovereign deposit, giving us confidence that there is meaningful scale potential over multiple kilometres of strike and at least 600m of down-dip extent.

“We are now fast-tracking work to define the extent of this lode, including sampling of historical holes that intersected this position and drilling targeted step-outs to specifically target its lateral extents.

“In addition to this exciting discovery, we continue to deliver excellent results from our growth drilling at Sovereign. These results continue to strengthen and expand the existing resource, reinforcing Sovereign as a key driver within our broader North Kalgoorlie strategy.

“With established infrastructure, advanced permitting and proximity to multiple processing options, we are well positioned to rapidly unlock value from these exciting new discoveries at Comet Vale.”

Update from the North Kalgoorlie Gold Hub

The North Kalgoorlie Gold Hub has a resource base of 1,200,000oz @ 3.7 g/t Au and is historically under-explored with more than 60km of high priority drill targets. The Hub is composed of the Comet Vale and Mulwarrie Projects, both on granted Mining Licences, close to milling and transport infrastructure.

Gorilla Gold added >1,000,000oz to the resource base of the North Kalgoorlie Hub in 2025 through drilling the targets it had identified.

Gorilla has an aggressive strategy to 'Discover' further gold resources, 'Define' these resources and 'Develop' the project.

The Comet Vale Project has a Mineral Resource Estimate ('MRE') of 0.86Moz @ 3.7 g/t Au and has seen historical gold production of >200koz @ >20g/t Au, with underground operations occurring as recently as 2020.

The Comet Vale project lies within granted Mining Leases, adjacent to the Goldfields Highway, in a region with multiple operational gold mills within a 100km radius. The Company has identified a 10km by 3km zone of interrelated structural deformation and mineralisation zones within which the Sovereign shear-zone, King Kong shear-zone, and the Silverback shear-zones are situated.

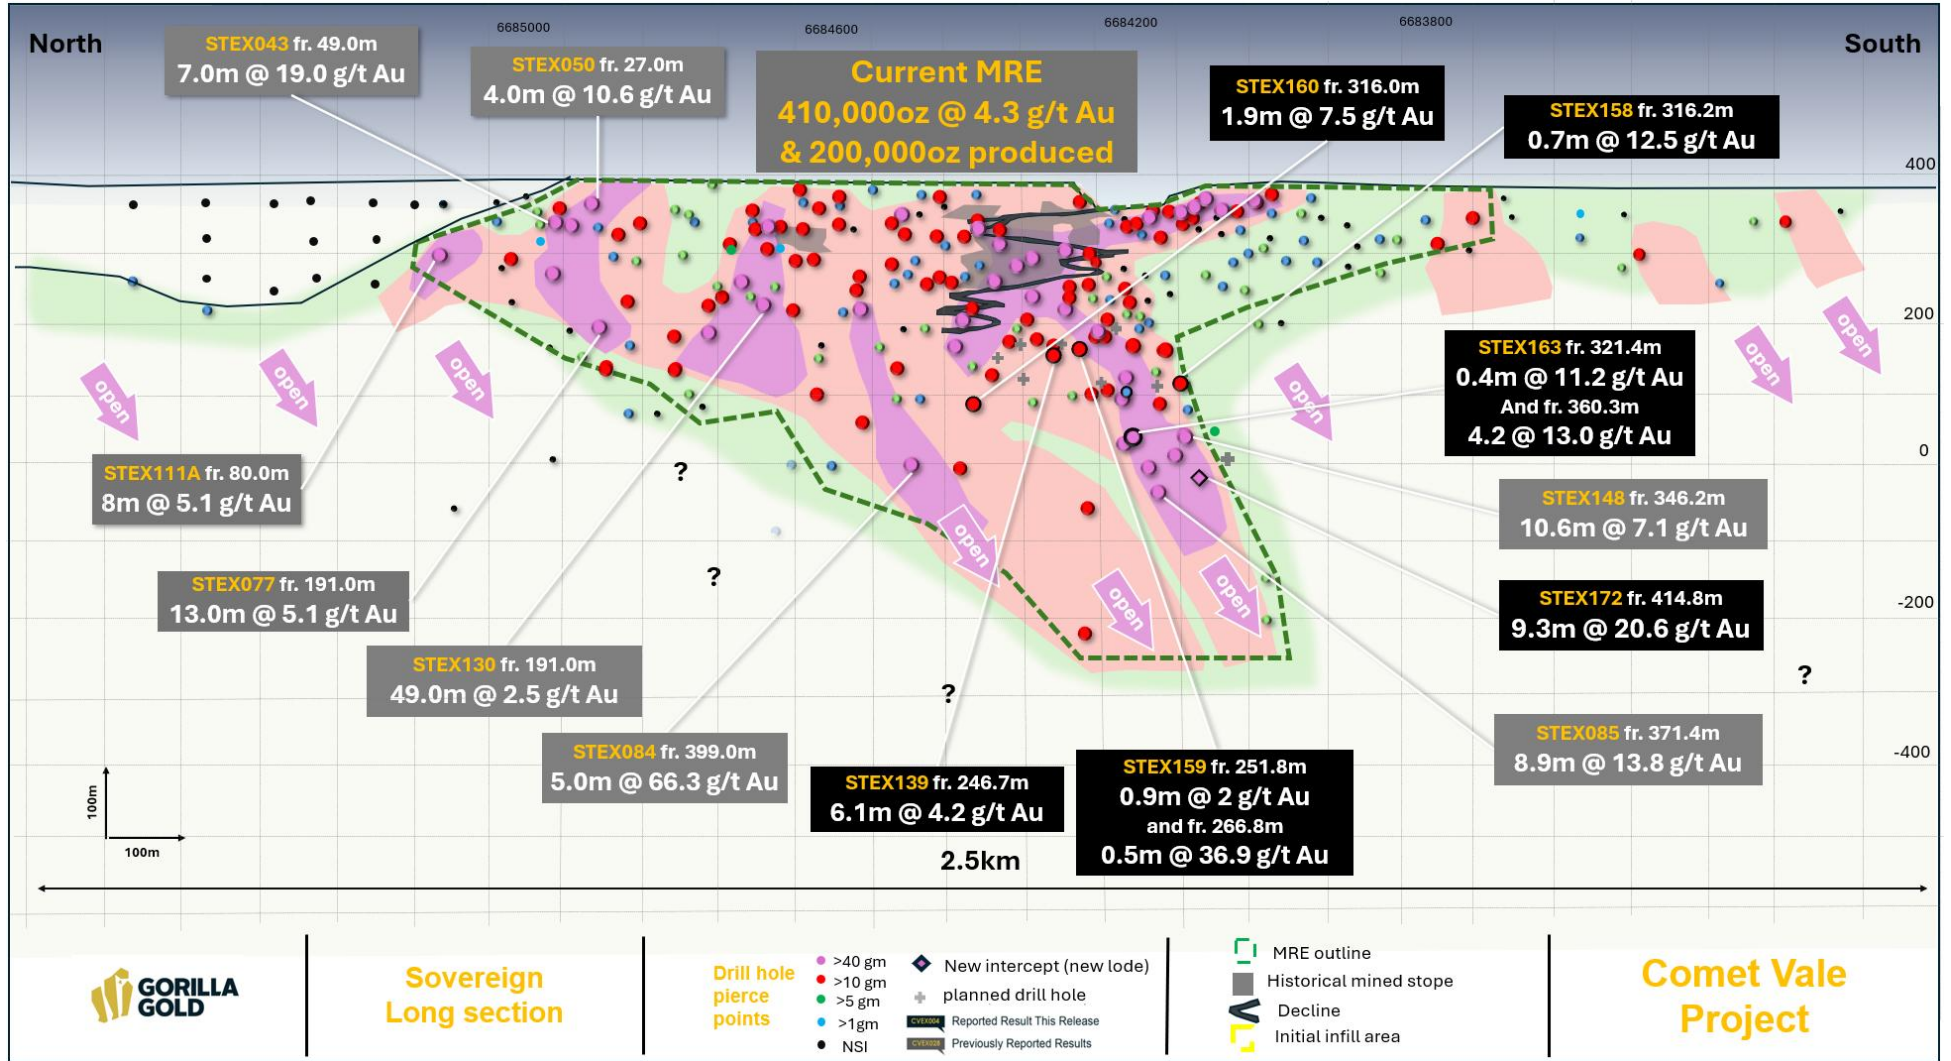

Figure 3. Long section from the Sovereign deposit, Comet Vale Project

personal use only

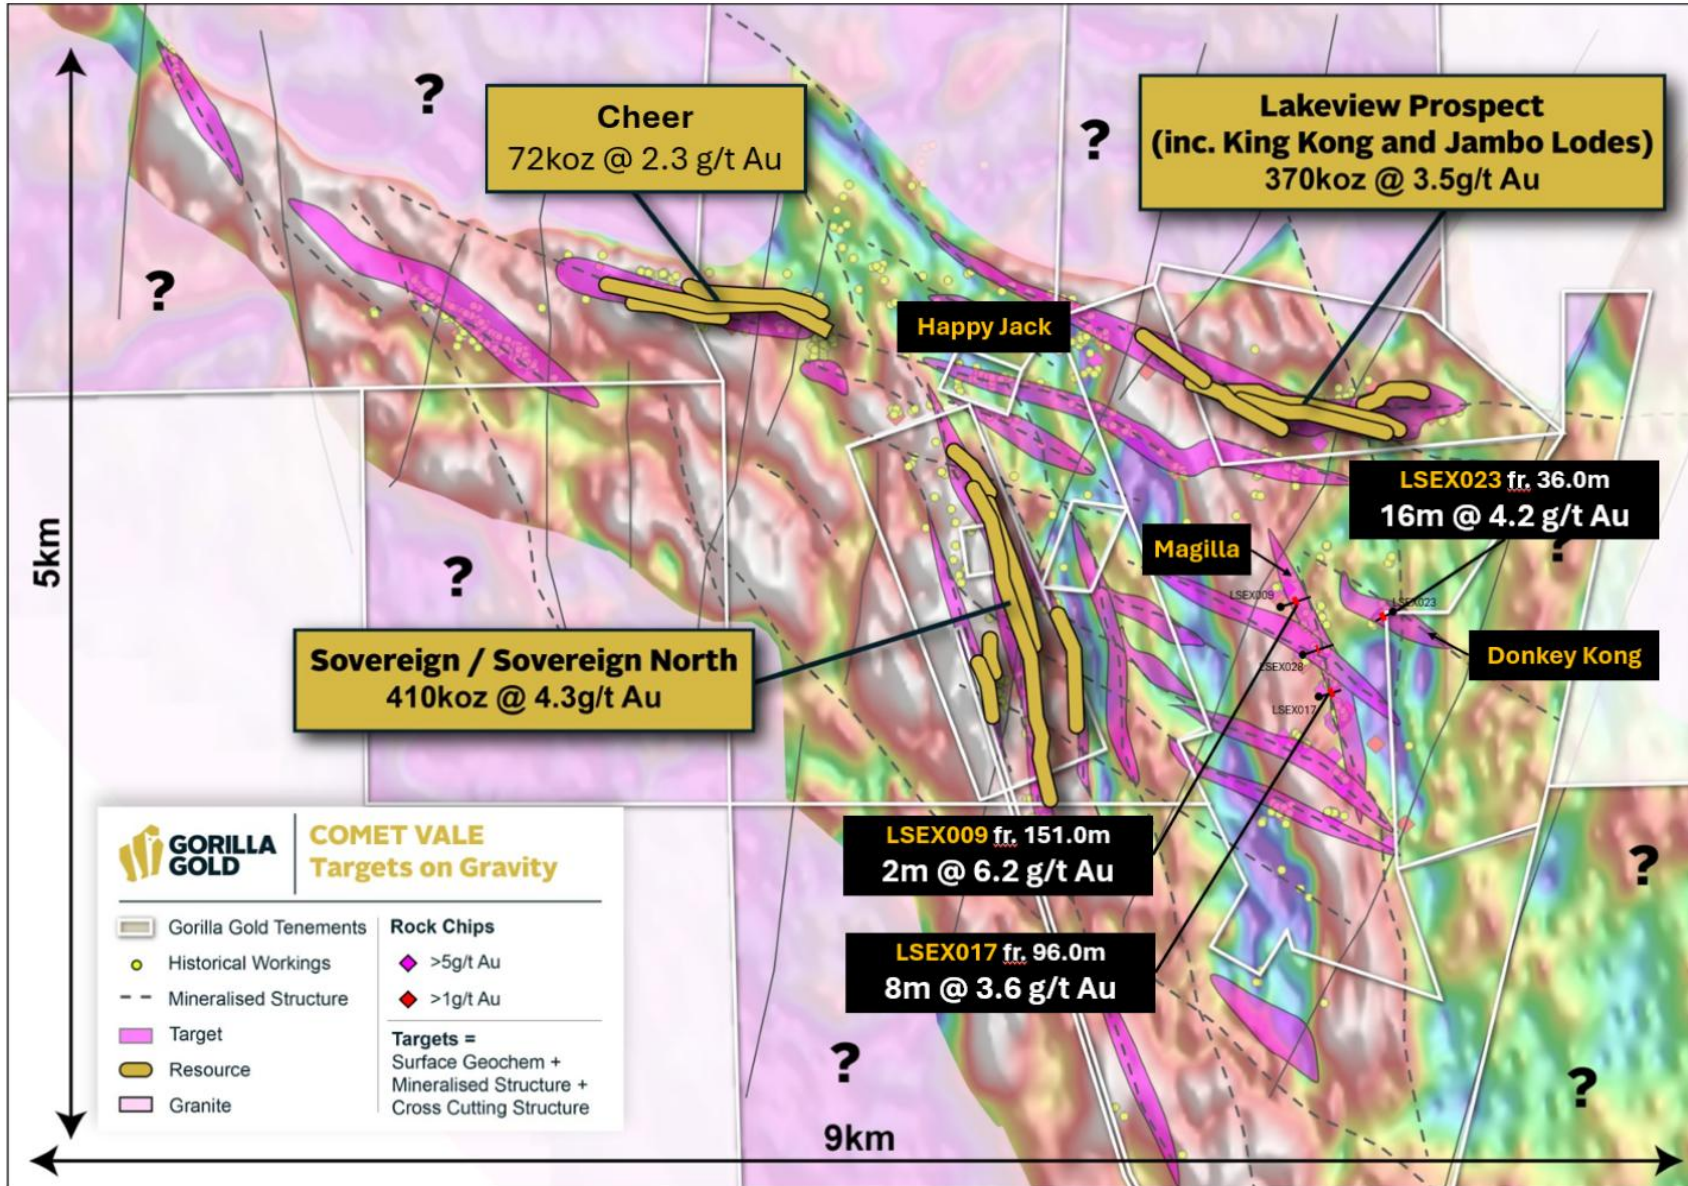

Figure 4. Plan showing target locations at the Comet Vale Project

Significant new high-grade footwall lode discovered at Sovereign

Diamond drillhole STEX172 has intersected 9.3m @ 20.6 g/t Au from 414.8m in a new footwall position at the Sovereign deposit. This position has only been intersected by a handful of holes at the deposit and has never before been sampled within the ultramafic stratigraphies.

Gold mineralisation in this new discovery is very different to typical mineralisation from the Sovereign deposit. Mineralisation at Sovereign is typically hosted in mafic/intermediate intrusive rocks within quartz veins with associated sulphides (Figure 6). This new lode is hosted in ultramafic stratigraphies with no quartz veining and only a very small amount of sulphide development (Figure 5). Mineralisation appears to be associated with zones of the highest strain as opposed to the carbonate veining that is prevalent throughout ultramafics at Comet Vale.

This lode could be present for the entire length of the Sovereign System, a multi kilometre system present from surface to a depth of at least 600 vertical metres. The Company is reviewing this possibility aggressively.

Figure 5. Photo of new discovery in drillhole STEX172 from 414.8m: 9.3m @ 20.6g/t Au. Veining in this intercept is dolomite and not directly associated with gold mineralisation.

Figure 6. Photo of typical sovereign main lode intercept in STEX163 (this release) from 360.3m 4.2m @ 13.0 g/t Au

Table 1. New Comet Vale assays, this release

Next Steps at North Kalgoorlie Hub

A resampling and new diamond drilling program is underway to assess the scale of this newly discovered footwall lode at Sovereign.

An additional RC rig has been contracted to speed up the exploration drilling at the new discoveries at Comet Vale. Meanwhile discovery drilling activities are finishing up at the Happy Jack Prospect (Figure 4), where drilling was targeting extensions to high-grade shallow gold mineralisation intercepted in 2025.

Two diamond rigs are undertaking extensional growth drilling at the Sovereign Deposit, and one diamond rig is undertaking extensional growth drilling at Mulwarrie.

One diamond rig is active at the Vivien Project drilling the Vivien hanging wall and footwall exploration targets.

Other Definition work including engineering, geotechnical, metallurgical and hydrological studies are ongoing as well as Development work which at this stage includes permitting work.

This announcement has been authorised and approved for release by the Board.

Competent Person's Statement:

The information in this announcement relates to exploration results for the Comet Vale Project, including the Sovereign Deposit, which Mr. Charles Hughes has reviewed and approves. Mr. Hughes, who is an employee of Gorilla Gold Mines Ltd, a professional geoscientist and a Member of the Australian Institute of Geoscientists. Mr. Hughes has sufficient experience relevant to the style of mineralisation and type of deposits under consideration, and to the activities which have been undertaken to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration results, Mineral Resources and Ore Reserves. Mr. Hughes consents to the inclusion in this announcement of the matters based on this information in the form and context in which it appears.

Specific exploration results referred to in this announcement were originally reported in the following Company announcements in accordance with ASX Listing Rule 5.7:

Title	Date
New Discoveries at Comet Vale	27 April 2026
High Grade Hits from Comet Vale	8 April 2026

Comet Vale Mineral Resource Estimate	11 April 2023

The Company confirms that it is not aware of any information or data that materially affects the information included in the said original announcements and the form and context in which the Competent Persons' findings are presented have not materially modified from the original market announcements.

Current Mineral Resource Statement for the Comet Vale Project:

Comet Vale Mineral Resource estimate						
	Resource category	Cut-off grade (Au g/t)	Au			
			Tonnes (kt)	Grade (Au g/t)	Au (koz)	
All	OP	0.5	Indicated	1,300	4.3	180
			Inferred	2,400	2.3	180
			Sub Total	3,700	3.0	350
	UG	1.1	Measured			
			Indicated	400	3.7	47
			Inferred	3,200	4.5	460
			Sub Total	3,600	4.4	510
	ALL		Measured			
			Indicated	1,700	4.1	220
			Inferred	5,600	3.5	640
			Total Resource	7,300	3.7	860

The Company confirms that it is not aware of any new information or data that materially affects the information as previously released on 15 December 2025 and all material assumptions and technical parameters underpinning the estimate continue to apply and have not materially changed.

Current Mineral Resource Statement for the Mulwarrie Project:

Mulwarrie Mineral Resource Estimate Summary (0.5g/t cut-off Open pit, 1.1 g/t Underground)			
Category	Tonnage (Mt)	Au Grade (g/t)	Au Ounces
Inferred	1.3	2.8	110,000
Indicated	1.8	4.2	240,000
Total	3	3.6	350,000

The Company confirms that it is not aware of any new information or data that materially affects the information as previously released on 4 August 2025 and all material assumptions and technical parameters underpinning the estimate continue to apply and have not materially changed.

Current Mineral Resource Statement for the Vivien Project:

Vivien Mineral Resource Estimate Summary (0.5g/t cut-off Open pit, 1.1 g/t Underground)			
Category	Tonnage (Mt)	Au Grade (g/t)	Au Ounces
Indicated	0.15	4.9	24,000
Inferred	1.95	4.1	254,000
Total	2.10	4.1	278,000

The Company confirms that it is not aware of any new information or data that materially affects the information as previously released on 15 April 2025 and all material assumptions and technical parameters underpinning the estimate continue to apply and have not materially changed.

APPENDIX 2 JORC TABLES

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Comments
Sampling techniques	<ul style="list-style-type: none"> Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling. Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. 	<ul style="list-style-type: none"> RC drilling - samples collected as 4m composites and in areas where interesting lithology, alteration, mineralisation or veining was encountered, 1m splits were taken. Composite samples are collected from samples piles, 1m splits are taken for every metre from the cyclone with duplicate samples taken at the instruction of the field geologist from the second chut on the cone. DD drilling has samples collected as half core in intervals between 0.3-1m based on lithology. Samples collected by GG8 field crew and submitted to ALS Laboratory in Kalgoorlie, WA. All samples are considered to be representative for the manner in which they are used.
	<ul style="list-style-type: none"> Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information. 	<p>The samples were analysed using the photon assay method which uses a 0.5kg sample and requires minimal handling. The samples are riffle split at the lab and crushed to 80% passing 2mm to ensure homogeneity as uniform sample distribution is important to a quality analysis.</p> <p>SOILS</p> <ul style="list-style-type: none"> Soil samples were collected by Gorilla Gold and contractors (OZEX Exploration Services and Omni GeoX) personnel on a 400x200m across Mulwarrie (Mulline) and 200x40m, 200x20m and 100x20m grid across Comet Vale. Samples were collected by digging a 30x30x10cm pit, homogenising and then sieving and collection of a dry 250g –2mm sample. Samples were submitted to LabWest (Perth) for Ultra Fine Fraction (UFF) separation (<2µm) and analysis by Aqua Regia ICP-MS and ICP-OES for determination of Au and 51 elements.
Drilling techniques	<ul style="list-style-type: none"> Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc). 	<ul style="list-style-type: none"> RC drilling was completed by several contractors using multiple modern RC rigs capable of significant drill depths. RC drilling uses a standard 5.5in bit and an auxiliary booster capable of 900psi, sufficient to keep sample dry at most depths. DD drilling was completed by contractors using multiple modern DD rigs. All drill rigs utilised by GG8 are industry best standard.
Drill sample recovery	<ul style="list-style-type: none"> Method of recording and assessing core and chip sample recoveries and results assessed. 	<ul style="list-style-type: none"> RC sample recovery was qualitatively assessed by the field geologists. Good recoveries were had. DD recovery measured actual core length between drillers blocks to the nearest cm. Sample weights are recorded by the laboratory and average 3kg.
	<ul style="list-style-type: none"> Measures taken to maximise sample recovery and ensure representative nature of the samples 	<ul style="list-style-type: none"> Sample depths were cross-checked regularly. The cyclone was regularly cleaned to ensure no material build up and sample material was checked for any potential downhole contamination. The drilling sample recoveries/quality are acceptable and are appropriately representative for the style of mineralisation.

For personal use only

	<ul style="list-style-type: none"> Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material. 	<ul style="list-style-type: none"> No obvious sample recovery biases or biases related to loss or gain of fines have been identified.
Logging	<ul style="list-style-type: none"> Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. 	<ul style="list-style-type: none"> Logged for geology on the 1m intervals with chips washed and stored in chip trays by the geologist. Logging was inputted directly into the onsite laptops using suitable Company logging. DD core stored in trays with every metre logged. Logging is of a qualitative nature.
	<ul style="list-style-type: none"> Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography. 	<ul style="list-style-type: none"> RC chips and DD were logged for lithology, colour, weathering, texture and minerals present. Structural measurements and geotechnical data were recorded on DD core
	<ul style="list-style-type: none"> The total length and percentage of the relevant intersections logged. 	<ul style="list-style-type: none"> 100% of relevant intersections have been logged.
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none"> If core, whether cut or sawn and whether quarter, half or all cores taken. 	<ul style="list-style-type: none"> Core is sawn with half cores taken for assay.
	<ul style="list-style-type: none"> If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry. 	<ul style="list-style-type: none"> RC drilling single 1 metre splits were automatically taken at the time of drilling by a cone splitter attached to the cyclone. 4m composite samples were taken from sample piles. Samples have been dry. Samples are then riffle split at the lab into 0.5kg samples and crushed to 2mm prior to photon assay with a particle size distribution test to ensure 80% passing the 2mm threshold. <p>SOILS</p> <ul style="list-style-type: none"> Soil samples were submitted to LabWest in Perth where the -2µm particle size fraction is extracted using the Ultra Fine method developed by CSIRO and LabWest.
	<ul style="list-style-type: none"> For all sample types, the nature, quality and appropriateness of the sample preparation technique. 	<ul style="list-style-type: none"> The technique was appropriate for the work undertaken. During RC logging samples that showed mineralisation, veining or alteration had 1m split samples collected. 1m split samples are later taken from where 4m composites show >0.2g/t gold anomalism. During DD logging any sulphide veining or alteration were sampled. <p>SOILS</p> <ul style="list-style-type: none"> The Ultra Fine Fraction sampling and analysis has been proven to be an effective technique for gold exploration across a wide range of regolith types.
	<ul style="list-style-type: none"> Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. 	<ul style="list-style-type: none"> QAQC reference samples and duplicates were submitted by GG8. In house standards and blanks were also inserted by ALS. <p>SOILS</p> <ul style="list-style-type: none"> Sub-sampling is conducted by LabWest using their proprietary UFF method.
	<ul style="list-style-type: none"> Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling. 	<ul style="list-style-type: none"> 1m samples are automatically bagged from the cyclone, field duplicates are taken from a second chute off the splitter. DD duplicates are taken by sampling quarter core over the same interval as the primary sample. <p>SOILS</p> <ul style="list-style-type: none"> Every 50 samples a field duplicate is collected by digging a second pit within 2-3m of the original sample pit, homogenising and then sieving and collection of a dry 250g -2mm sample.
	<ul style="list-style-type: none"> Whether sample sizes are appropriate to the grain size of the material being sampled. 	<ul style="list-style-type: none"> All RC samples are collected to approximately 1-5 kg. The sample sizes taken are appropriate relative to the style of mineralisation and analytical methods undertaken. DD sample size is appropriate.

For personal use only

		<p>SOILS</p> <ul style="list-style-type: none"> Sample sizes are appropriate for the grain size of the material sampled.
<p>Quality of assay data and laboratory tests</p>	<ul style="list-style-type: none"> The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. 	<ul style="list-style-type: none"> All samples were sent to ALS laboratory in Kalgoorlie. Photon Assay method has shown to provide quick turnaround times and high accuracy. <p>SOILS</p> <ul style="list-style-type: none"> Samples were screened in the field to -2mm. LabWest then takes a sub-sample of <2µm material for analysis. The UFF sample preparation was defined following a Research and Development project conducted under the direction of CSIRO. Field duplicates are submitted and perform to internal GG8 standards.
	<ul style="list-style-type: none"> For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc. 	<ul style="list-style-type: none"> All analytical results from drilling listed are from an accredited laboratory using photon assay method with fire assay as a check method.
	<ul style="list-style-type: none"> Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established. 	<ul style="list-style-type: none"> Certified Reference Materials (CRMs) are included in each batch to ensure the reliability of the assay. These CRMs, such as OREAS254C, OREAS230, and OREAS241, are specifically chosen for photon assay to maintain quality standards and were evaluated against published certificates. The standard deviation was minimal for samples. Selected photon assays over a range of grades and from different parts of orebodies are umpire checked with Fire Assays and so far shows no material difference in reported grades. <p>SOILS</p> <ul style="list-style-type: none"> Field duplicates at a frequency of 1:50 are submitted and performed to GG8 internal standards.
<p>Verification of sampling and assaying</p>	<ul style="list-style-type: none"> The verification of significant intersections by either independent or alternative company personnel. 	<ul style="list-style-type: none"> External verification has not been carried out, but values were checked against logging and photographs to ensure the intersected Au values are in line with logged alteration, mineralisation or veining. Significant intercepts have been verified by the Exploration Manager, the CEO and Principal consulting geologist. <p>SOILS</p> <ul style="list-style-type: none"> Significant results are revisited with ground-truthing and follow-up sampling where appropriate.
	<ul style="list-style-type: none"> The use of twinned holes 	<ul style="list-style-type: none"> No twinned holes at this stage as the project is still advancing.
	<ul style="list-style-type: none"> Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols. 	<ul style="list-style-type: none"> Data was captured directly into specific geological logging software. Assay files have been sent directly from the lab to database manager to avoid operator errors. All physical sampling sheets are filed and scanned electronically and submissions to the lab checked to ensure that no samples are missing or incorrect IDs. <p>SOILS</p> <ul style="list-style-type: none"> Sample locations and track files are stored directly onto the sampler's GPS and downloaded for verification. Assay files have been sent directly from the lab to database manager to avoid operator errors. All physical sampling sheets are filed and scanned electronically and submissions to the lab checked to ensure that no samples are missing or incorrect IDs.
	<ul style="list-style-type: none"> Discuss any adjustment to assay data. 	<ul style="list-style-type: none"> No adjustments were made to the assay data because none are needed.

For personal use only

Location of data points	<ul style="list-style-type: none"> Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. 	<ul style="list-style-type: none"> Samples were located using handheld Garmin GPS, the GPS is accurate within 3-5m.
	<ul style="list-style-type: none"> Specification of the grid system used. 	<ul style="list-style-type: none"> All locations and maps quoted in this Report are using the GDA1994 MGA, Zone 51 coordinate system.
	<ul style="list-style-type: none"> Quality and adequacy of topographic control. 	<ul style="list-style-type: none"> Topography based on detailed topographic surveys.
Data spacing and distribution	<ul style="list-style-type: none"> Data spacing for reporting of Exploration Results. 	<ul style="list-style-type: none"> Data spacing is varied <p>SOILS</p> <ul style="list-style-type: none"> Data spacing is varied with sampling at 400x200m across Mulwarrie (Mulline) and 200x40m, 200x20m and 100x20m grid across Comet Vale.
	<ul style="list-style-type: none"> Whether the data spacing, and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. 	<ul style="list-style-type: none"> Data spacing is sufficient for the Mineral Resources estimate, no Reserves have been estimated yet.
	<ul style="list-style-type: none"> Whether sample compositing has been applied. 	<ul style="list-style-type: none"> Intercepts are aggregated based upon 0.5g/t Au cut-off grade and 3m of dilution material.
Orientation of data in relation to geological structure	<ul style="list-style-type: none"> Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. 	<ul style="list-style-type: none"> The relationship between the drilling orientation and the orientation of mineralised structures is not considered to have introduced a sampling bias. Most holes have been drilled perpendicular to the main orientation of the interpreted mineralised zone. <p>SOILS</p> <ul style="list-style-type: none"> Soil lines have been oriented perpendicular to interpreted structures and lithological contacts as appropriate in orogenic gold exploration.
	<ul style="list-style-type: none"> If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material. 	<ul style="list-style-type: none"> No drilling orientation related sampling bias has been identified at the Project. Some orientation changes were made to historic holes, and the main structure was intersected at the interpreted depth.
Sample security	<ul style="list-style-type: none"> The measures taken to ensure sample security. 	<ul style="list-style-type: none"> Samples were transported from the field to the lab by GG8 personnel or GG8's freight contractor. <p>SOILS</p> <ul style="list-style-type: none"> Samples were transported from the field to LabWest by GG8's freight contractor.
Audits or reviews	<ul style="list-style-type: none"> The results of any audits or reviews of sampling techniques and data. 	<ul style="list-style-type: none"> GG8 undertakes continuous audits and reviews of all its field processes and results.

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	<ul style="list-style-type: none"> Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings. 	<p>Gorilla Gold Mines Ltd 100% owns the projects through its wholly owned subsidiaries.</p> <p>COMET VALE</p> <p>M29/35, M29/52, M29/85, M29/185, M29/186, M29/197, M29/198, M29/199, M29/200, M29/201, M29/232, M29/233, M29/235, M29/270, M29/321</p> <p>Kakara Part A has been granted Native Title over the project area. The Company does not at present have any agreements with Kakara part A but are in the process of engagement.</p> <p>MULWARRIE</p> <p>M30/119, M30/145, E30/511, E30/512, E30/513, P30/1141, P30/1142, P30/1143.</p> <p>Marlinyu Ghoorlie has a Native Title claim over the project area. The Company has an existing agreement over the majority of the project area and is currently negotiating the inclusion of the additional tenements with Marlinyu Ghoorlie.</p>
	<ul style="list-style-type: none"> The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area. 	<ul style="list-style-type: none"> No known impediments exist with respect to the exploration or development of the tenements.
Exploration done by other parties	<ul style="list-style-type: none"> Acknowledgment and appraisal of exploration by other parties. 	<ul style="list-style-type: none"> See previous announcements. In particular ASX announcement, 13 September 2024, Review of Historical Vivien and Comet Vale Databases and the Bardoc/Spitfire ASX announcement 19 March 2019, High-grade diamond drilling results at Mulwarrie confirm lode structures and pave way for resource upgrade.
Geology	<ul style="list-style-type: none"> Deposit type, geological setting and style of mineralisation. 	<p>COMET VALE & MULWARRIE</p> <p>Archean orogenic gold mineralisation associated with major structures and mafic-ultramafic stratigraphy with intermediate intrusives adjacent to intracratonic monzogranites, gold mineralisation is associated with quartz veining, pyrrhotite, chalcopyrite, galena, sphalerite, and amphibole-biotite-chlorite alteration.</p>

For personal use only

Drill hole Information	<ul style="list-style-type: none"> A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: <ul style="list-style-type: none"> easting and northing of the drill hole collar elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar dip and azimuth of the hole down hole length and interception depth hole length. 	<ul style="list-style-type: none"> Tables reported in the announcement.
	<ul style="list-style-type: none"> If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case. 	<ul style="list-style-type: none"> No information material to the understanding of the exploration results has been excluded.
Data aggregation methods	<ul style="list-style-type: none"> In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g. cutting of high grades) and cut-off grades are usually Material and should be stated. 	<ul style="list-style-type: none"> Assay results reported here have been length weighted. No metal equivalent calculations were applied. Cut off grades is 0.5g/t Au
	<ul style="list-style-type: none"> Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. 	<ul style="list-style-type: none"> All samples were 1m or 4m samples were reported as returned. Compositing is based on a maximum of 4m internal dilution with a minimum cut off of 0.5g/t Au.
	<ul style="list-style-type: none"> The assumptions used for any reporting of metal equivalent values should be clearly stated. 	<ul style="list-style-type: none"> No weighting used.
Relationship between mineralisation widths and intercept lengths	<ul style="list-style-type: none"> These relationships are particularly important in the reporting of Exploration Results. 	<ul style="list-style-type: none"> All samples reported are downhole width.
	<ul style="list-style-type: none"> If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. 	<ul style="list-style-type: none"> Mineralization is generally perpendicular to drilling orientation.
	<ul style="list-style-type: none"> If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g. 'down hole length, true width not known'). 	<ul style="list-style-type: none"> All intercepts are down hole lengths, true widths not yet determined.

For personal use only

<p>Diagrams</p>	<ul style="list-style-type: none"> Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include but not be limited to a plan view of drill hole collar locations and appropriate sectional views. 	<ul style="list-style-type: none"> Plans and sections are located in the body of the announcement.
<p>Balanced reporting</p>	<ul style="list-style-type: none"> Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results. 	<ul style="list-style-type: none"> All samples were reported for Au and their context discussed. <p>SOILS</p> <ul style="list-style-type: none"> The accompanying document is a balanced report with a suitable cautionary note. Statistics for UFF soil samples (Au) within the Comet Vale project to date (n: 2,377) are: Minimum: 0.8 ppb. Maximum: 24,049 ppb Median: 22 ppb Mean: 77 ppb S.D: 687 ppb 90%: 89 ppb 95%: 152 ppb 98%: 329 ppb Statistics for UFF soil samples (Au) within the Mulwarrie-Mulline project to date (n: 1,677) are: <ul style="list-style-type: none"> Minimum: <0.5 ppb Maximum: 5070.6 ppb Median: 5.8 ppb Mean: 11 ppb S.D: 124 ppb 90%: 14.8 ppb 95%: 21.8 ppb 98%: 32.3 ppb Excluding outlier max value of 5070.6 ppb (n: 1,676): <ul style="list-style-type: none"> Minimum: <0.5 ppb Maximum: 160.2 ppb Median: 5.8 ppb Mean: 8 ppb S.D: 9.7 ppb 90%: 14.8 ppb 95%: 21.7 ppb 98%: 32.3 ppb
<p>Other substantive exploration data</p>	<ul style="list-style-type: none"> Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances. 	<ul style="list-style-type: none"> All other relevant data has been included within this report.

For personal use only

Further work	<ul style="list-style-type: none"> ▪ The nature and scale of planned further work (e.g. tests for lateral extensions or depth extensions or large-scale step-out drilling). 	<p>COMET VALE Additional soil sampling across the Comet Vale project is planned. Drilling is ongoing, refer to end of text for more comprehensive update.</p> <p>MULWARRIE Additional soil sampling across the Mulwarrie project is planned and drilling is scheduled to recommence in Q4 2025.</p>
	<ul style="list-style-type: none"> ▪ Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive. 	<ul style="list-style-type: none"> ▪ Supporting diagrams are all found in the body of the text.
