## ASX Announcement

### Maiden Soil Sampling Completed at Srebrenica North

- Phase 1 soil sampling at Srebrenica North has been completed, covering the Zanik and Chaush prospects on the Dolovi Tenement
- Zanik hosts extensive medieval workings and a ~2ha waste rock dump, with 1975 trench grabs returning up to 412g/t Ag, 21.9% Pb, 7.3% Zn and 0.9% Sb (ASX Ann 31.03.2026), and recent reconnaissance identifying gossanous breccia veins 1–3m wide with visible galena-sphalerite-pyrite.
- Chaush is a virgin exploration target with no historical mining despite mineralised structures mapped on the surface and a coincident historical magnetic anomaly correlating with hydrothermal alteration.
- Next phase tenement-wide soil sampling and ground magnetics planned to commence in the coming weeks.
- The Dolovi tenement borders Mineco's operating Sase (Gross) lead-zinc-silver mine

Regener8 Resources NL (ASX: R8R) (Regener8 or the Company) is pleased to advise the completion of field works for Phase 1 soil sampling on the Srebrenica North project (Project), following the recently completed acquisition of Orichalcum d.o.o. in Bosnia and Herzegovina.

Highlights

**Regener8 Managing Director, Stephen Foley, comments:**

“Completion of the maiden soil sampling program in such short succession after acquisition reflects Regener8’s eagerness to advance the Srebrenica North Project, and we thank our in-country team and service providers for enabling that pace. With first boots on the ground now finished, we look forward to receiving assay results and, in parallel, commencing Phase 2 soil sampling and initial ground magnetics over the coming weeks.”

**Phase 1 Soil Program**

Phase 1 sampling targeted the Zanik and Chaush prospects on the Dolovi Tenement at approximately 100m spacing along ridgelines and spurs (Figure 2) with a total of 208 samples collected. The program is designed to deliver the first modern, systematic geochemical dataset over the prospects, building on the historical evidence and recent field observations summarised below.

**Figure 3: Phase 1 Soils Sampling Locations**

Zanik (Figure 3), in the south-western Dolovi tenement, hosts extensive medieval workings and a ~2ha waste rock dump. Trench grabs in 1975 returned up to **412g/t Ag, 21.9% Pb, 7.3% Zn and 0.9% Sb** (ASX Ann 31.03.2026), with recent reconnaissance identifying gossanous breccia veins 1-3m wide and quartz veins with visible galena-sphalerite-pyrite. Phase 1 soils have now been collected across the area with historical workings, and extended into the area immediately to east, highlighted by the 1977 stream sediment results anomaly of 680ppm Pb (ASX Ann 31.03.2026).

Chaush (Figure 3), in the central Dolovi tenement, is a virgin target with mineralised lead-zinc structures extending to NNW from Sase (Pb-Zn-Ag), historically mapped at surface but no evidence of historical mining.

For personal use only

A magnetic anomaly correlates with hydrothermal alteration and the mapped structures (ASX Ann 31.03.2026). Phase 1 soils have now been collected across the prospect.

The Company's near-term focus is on receiving and interpreting Phase 1 assay results, with the next phase of fieldwork being Phase 2 soil sampling and ground magnetics, planned to commence in the coming weeks.

The Company looks forward to updating the market as results are received and exploration progresses.

The table with sampling locations will be included in the subsequent announcement about the results received.

Relevant ASX Announcements:

- 31 March 2026 – Srebrenica North Historical Results
- 1 June 2026 – Srebrenica North Acquisition Completed
- 9 June 2026 – Srebrenica North Maiden Soil Sampling Commenced

*With respect to the above announcements, R8R confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.*
