

CROWN SOIL SAMPLING COMPLETED, ADVANCING KALGOORLIE GOLD TARGETS

Highlights:

- Targeted soil sampling program completed at Crown Project near Kalgoorlie
- Crown is strategically positioned south of Black Cat Syndicate's (ASX: BC8) +500koz Majestic Gold Centre¹
- Program involved collection of approx. 400 samples for multi-element analysis
- Sampling tested areas above key structures associated with nearby Majestic Gold Centre
- Results expected in Q3 CY2026 and will be used to refine next aircore drilling targets

Auravelle Metals Limited (ASX: AUV) ("Auravelle" or "the Company") is pleased to advise it has completed a targeted soil sampling program at its Crown Gold Project, located approximately 40km south-east of Kalgoorlie in Western Australia's Eastern Goldfields.

The program forms part of Auravelle's systematic exploration strategy at Crown, which is designed to build a stronger pipeline of gold targets across a significantly under-explored project area located near established gold deposits and key regional infrastructure.

The latest field program comprised approximately 400 soil samples collected for multi-element analysis. Sampling was focused on infilling priority greenfield areas and testing interpreted structures considered prospective for gold mineralisation, including structures with a potential association to the nearby Majestic Gold Centre. Sampling locations were optimised by specialised regolith identification software to target areas most amenable to soil sampling.

Results from the program are expected in Q3 CY2026 and will be used to support target generation ahead of the next phase of aircore drilling at Crown.

Auravelle Managing Director Andrew Muir said:

"Completion of the sampling program represents another important step in our Company's disciplined exploration strategy."

¹ BC8 JORC Resources - see ASX: BC8 25/05/2026

"Crown remains a highly compelling exploration opportunity for Auravelle, particularly given its strategic location south of Black Cat Syndicate's Majestic Gold Centre and the limited amount of deeper drilling completed across the project to date.

"Following expansion of the project in April this year, our team has moved quickly to get back on the ground and progress systematic sampling across priority areas.

"The objective of this work is clear. We're looking to define additional gold anomalism across key structural corridors, build the next generation of aircore drilling targets and ultimately identify areas that justify deeper RC drill testing.

"Our first aircore drilling program at Crown, completed in 2025, defined a gold anomaly extending more than 2km², which remains open and requires deeper follow-up drilling.

"This latest soil sampling program is designed to add further depth to our target pipeline and ensure the next phase of drilling is focused on the areas with the strongest geological support.

"With its location near multiple sizeable gold deposits, proximity to infrastructure and very limited historical deep drilling, Crown remains a priority project within Auravelle's exploration portfolio."

The Company will update shareholders once assays have been received, interpreted and incorporated into planning for the next phase of exploration.

Looking Forward

Auravelle continues its aggressive program of groundwork and exploration activity, with significant ongoing news flow and activities across its key gold projects, including, but not limited to:

- Further updates on the upcoming drill programs at Nuckulla Hill
- In-fill and extensional RC drilling at Sheoak and other prospects at Nuckulla Hill
- Discovery focused air-core drilling at Nuckulla Hill
- Sheoak metallurgical test work results
- Soil sampling at the Skye Gold Project in South Australia

Competent Person Statement

The information in this report that relates to Exploration Results is based on, and fairly represents, information and supporting documentation compiled by Ms Anna Price, a Member of the Australian Institute of Geoscientists. Ms Anna Price is a full-time employee of Auravelle Metals Limited who holds shares and options in the Company and has sufficient experience relevant to the styles of mineralisation and types of deposit under consideration and to the activities being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Ms Price consents to the inclusion in this report of the matters based on her information in the form and context in which they appear.

Auravelle confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

About Auravelle

Auravelle Metals Limited (ASX: AUV) is an Australian-based exploration company focused on driving value from its recent high-grade gold discoveries at Nuckulla Hill in the Gawler Craton in SA, and the Crown Project, located near Kalgoorlie in Western Australia.
