WHIPSAW COPPER PROJECT (CANADA)

About the Whipsaw Copper Project

The Whipsaw Copper Project is 160km east of Vancouver and 17km west of Hudbay's Copper Mountain project in British Columbia, Canada. Whipsaw is a large-scale porphyry copper project located in an infrastructure rich pro mining setting. The Whipsaw holding is ~66km² and historical drilling, geological mapping, soil geochemistry and geophysical surveys support a substantial JORC (2012) Exploration Target across a mineralised system 3.7km in strike length and up to 1.2km in width, which is open.

0.51-1.02	0.14-0.23	86-147	1-2	0.01-0.02	0.2-0.4

The potential quantity and grade of the Exploration Target is conceptual in nature and, as such, there has been insufficient exploration drilling conducted to estimate a Mineral Resource. At this stage it is uncertain if further exploration drilling will result in the estimation of a Mineral Resource. The Exploration Target has been prepared in accordance with the JORC Code (2012).
