ALTITUDE MINERALS
ASX:ATT

QUARTERLY REPORT

JUNE 2026

14 July 2026

Altitude Minerals Ltd (ASX: ATT)

Quarterly Activities Report for the period ending 30 June 2026

OVERVIEW

Exploration

- Altitude Minerals ('Altitude', 'ATT' or the 'Company') defined drill targets at the Byrock Project in the Macquarie Arc, NSW, by integrating newly processed gravity and passive seismic data with new geophysics and geochemistry data gathered from aircore drilling conducted in 2025
- Altitude conducted a 1,501m drill program at the Byrock Project to test the highest-priority Pipe Targets for "pencil" pipe-like copper-gold porphyry systems concealed beneath shallow cover, with laboratory results to be reported once received
- Altitude secured an exclusive Option to Purchase the gold and silver W-Project in Nevada
- Complementary to the nearby Firenze Silver & Gold Project, the W-Project hosts up to 30m wide outcropping epithermal Ag-Au quartz/calcite veins over ~1,800m of strike untested at depth
- 40 of 43 historical drill holes at the W-Project intersected gold mineralisation, including 37m @ 1.30 g/t Au, 9.8 g/t Ag from 31m (W87-1)
- ATT's desktop review of the W-Project shows that the potential high-grade boiling and feeder zones remain untested for silver and gold mineralisation
- The Firenze Silver & Gold Project was confirmed 'drill-ready', with high-priority targets defined along a ~1.2 km NW-SE structural corridor, and a 2,600m (9-hole) RC drill program designed
- A proposed combined RC drill program across the Firenze and W-Projects is now being planned to test more targets in a single campaign and maximise drilling efficiency

Corporate

- A well-supported Placement raised $1,155,000 (before costs) to fund drilling at Byrock and the acquisition and target validation at ATT's Nevada Silver and Gold projects
- Managing Director Duncan Chessell presented at the RIU Resources Roundup Conference in Sydney, outlining Altitude's "Pipeline" strategy, and announcing the Company's new W-project
- As of 30 June 2026, Altitude Minerals maintained a cash balance of $1.1m

Altitude's mission is simple: hunt for high-reward targets and drill test them.

This quarter, we did exactly that.

After a 15-month program of methodical, low-cost validation using multiple geophysical datasets, geochemistry, and first-pass aircore drilling, we drilled three pipe-like targets that are directly analogous to the economic 'pencil' porphyries of the Northparkes cluster. Porphyry copper-gold deposits are among the largest and most valuable mineral systems on earth; they supply roughly three-quarters of the world's copper and a fifth of its gold. The Macquarie Arc in NSW is Australia's premier porphyry province. These are the kinds of targets that Altitude is seeking and ones that have the potential to deliver outsized rewards for shareholders.

At the same time, we uncovered fresh silver & gold drill targets in Nevada, the state with the highest annual gold production in the USA. The Firenze Project is now confirmed drill-ready, fully permitted, with a 2,600m RC program designed to test an undrilled epithermal silver & gold system.

We also added the nearby W-Project to the ATT pipeline. With 40 of 43 historical holes intersecting gold mineralisation, we know that we are in the right area, but our review of historical data indicates that the high-grade feeder zones have never been effectively tested, presenting Altitude with a significant opportunity.

With one drilling program just completed and one ready to go, I believe we are executing on our vision, and shareholders can look forward to a steady stream of news flow and results in the second half of 2026.

- Duncan Chessell
Managing Director
Altitude Minerals

EXPLORATION

Drill Testing: Copper-Gold Porphyry Targets

Macquarie Arc, NSW

The Byrock Project is located near Bourke, NSW, in what the Company interprets to be the north-west extension of the Macquarie Arc – Australia's premier porphyry copper-gold province. The Macquarie Arc hosts several world-class mines, including Newmont's Cadia and Evolution Mining's Northparkes and Cowal operations. These deposits exhibit "pipe-like" geophysical features with dimensions analogous to the targets within the Byrock Project.

The multi-year $195M in exploration commitments from AngloGold Ashanti to Kincora Copper and Inflection Resources over ground immediately adjacent to Altitude's tenure highlights the attention this region has received in recent years.

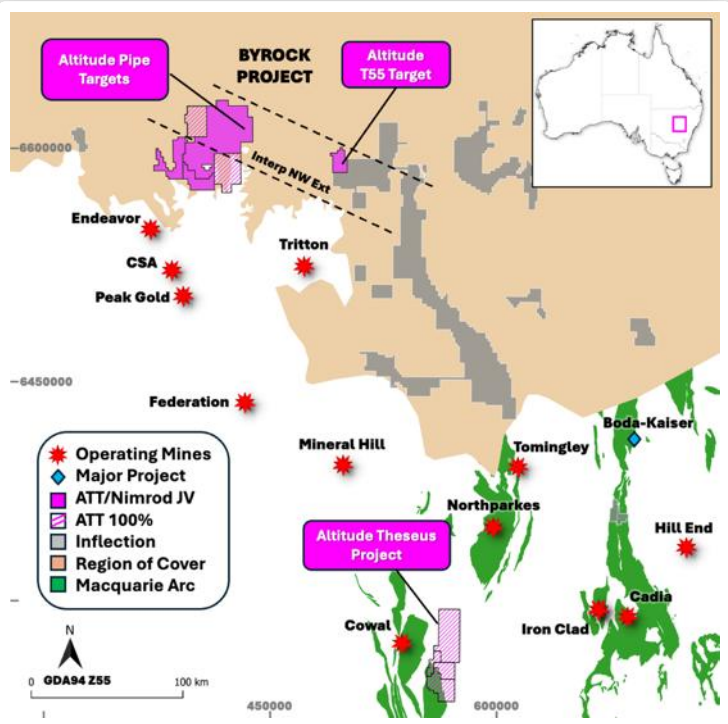

Figure 1. The location of Altitude's Byrock Project (Option & earn-in with Nimrod Resources) and the Theseus Project (100% owned), in relation to the known copper deposits in the Macquarie Arc, NSW. Source: NSW Government.

During the quarter, Altitude progressed the Byrock Project from target validation to drill testing - processing and integrating the new geophysical datasets, finalising drill targets, securing permits and a rig, and commencing the RC drill program in mid-June.

Target Validation to Drill Testing

In early May, the Company reported that processing of the newly acquired gravity and passive seismic data (775 infill gravity stations and 92 line-km of passive seismic acquired through March and April) had been completed and integrated with the detailed airborne magnetic surveys and the geochemical data collected during the 2025 air-core drill campaign.

The Company used the combined dataset to refine its list of 'pipe-like' targets. This process involved identifying gravity lows that halo discrete magnetic anomalies (interpreted as the potential core of a copper-gold porphyry system) that also coincided with zones of hydrothermal alteration and brecciation identified in drilling. Importantly, by combining all of the data, the team were also able to show the pipe-like targets that exhibited the scale potential of economic deposits elsewhere in the Macquarie Arc.

This new information allowed the exploration team to make a detailed assessment of each potential 'pipe-like' target, predict the depth to the 'core', and design a drill program optimised to make the best use of drilling metres and fully test the best targets.

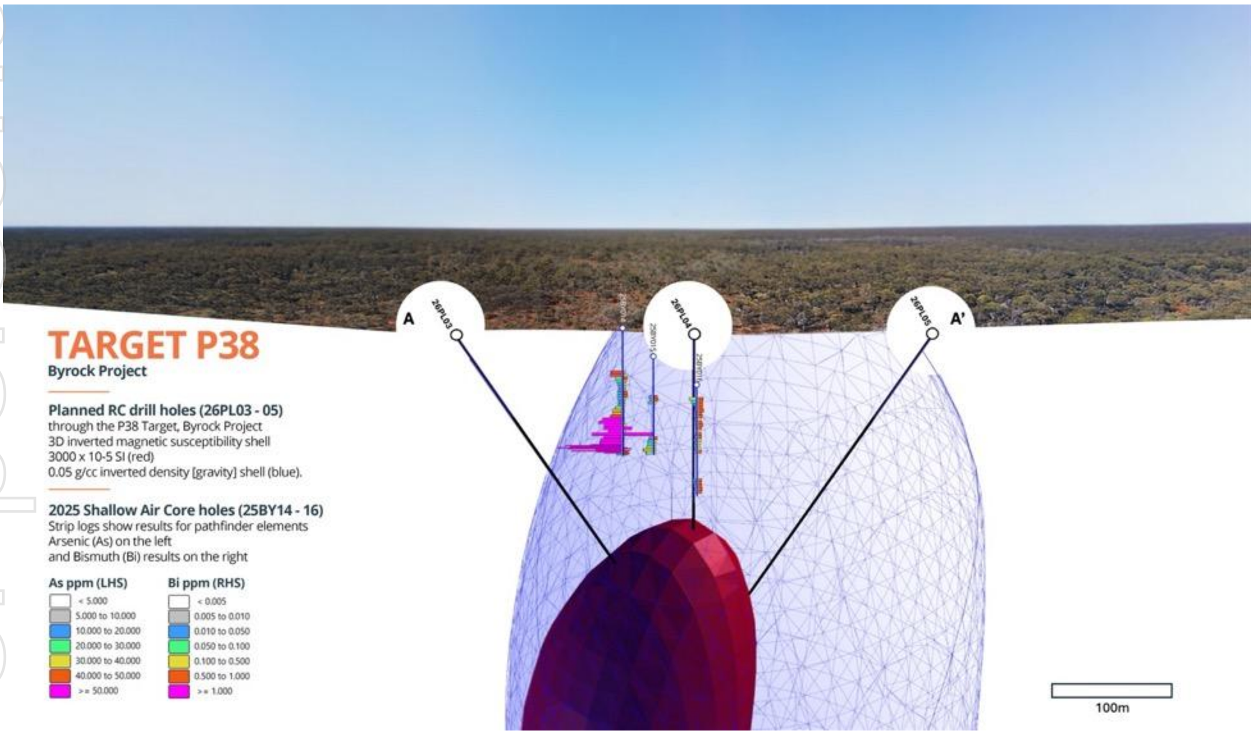

Figure 2. P38 Prospect and target validation data.
Drill tested with shallow aircore holes (ASX 6/2/2026) in November 2025.
3D inverted magnetic susceptibility shell 3000 x 10-5 SI (red) (ASX: "Geophysics Update and Results - Byrock Copper Gold Project" on 7/5/2025) 0.05 g/cc inverted density [gravity] shell (blue).

Drilling permits were issued in late May, and following earthworks, an RC and diamond-core drilling program commenced in mid-June. The program was operated by project partner Nimrod Resources, in collaboration with Altitude's geology team, and was completed in early July.

Drill Program Details

- 3 of 4 planned targets were tested
- 5 holes
- 1,501 meters
- Heavy rain prevented access to one target (P39)
- Assays expected in August

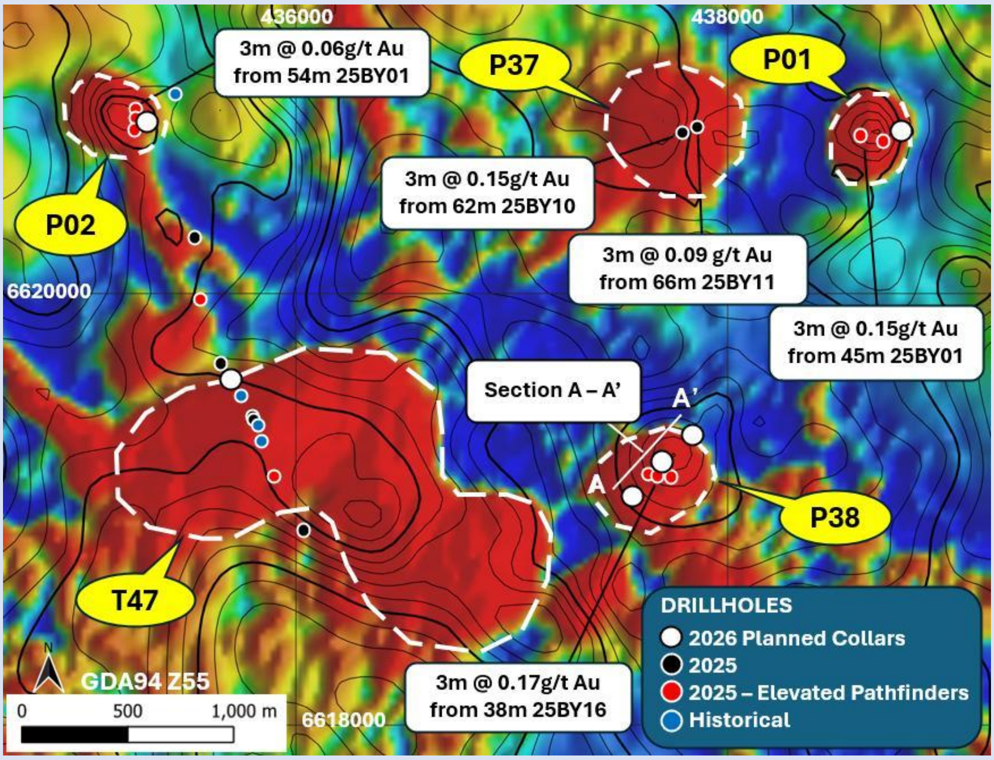

Figure 3. Planned 2026 RC drill collar locations with ½ VD RTP magnetics (ASX 7/5/2025) overlain by 1VD gravity contours and previous holes including 2025 aircore holes (ASX 6/2/2026). The interpreted extent of the Pipe Targets is shown by the dashed line. Gravity contour interval 0.1 mGal.

The Company expects to release assay results to the market in August

Figure 4. Drilling on the Byrock Project (July 2026)

Validating: Silver & Gold Targets

Nevada, USA

After securing more high-quality ground in the world's #1-ranked mining jurisdiction, the Altitude team ramped up its efforts to complete the foundational work required to validate and refine drill targets across its growing portfolio of Silver and Gold Projects in Nevada. This work culminated in the team expanding its plans from a 2,600m RC drill program at the Firenze Project into a larger, more comprehensive combined program testing more targets across Firenze and the newly acquired W-Project to maximise drilling efficiency.

Figure 5. Altitude's Nevada Projects

The Firenze Project: 'Drill Ready'

During the quarter, the 100%-owned Firenze Silver & Gold Project was advanced to drill-ready status. This followed the completion of the final stages of target validation process that the team commenced upon acquiring the project in late 2025.

Because the project was until recently classified as a Wilderness Study Area and has never been drill tested, the team needed to do a lot of foundational work, including comprehensive CSAMT and magnetic surveys, detailed structural and alteration mapping, and integrating all those datasets into a detailed 3D geological model to properly validate the areas of interest that had been identified by high-grade rock chip results.

Figure 6. Geophysical surveys underway at the Firenze Project

In April, the Altitude team completed this work and identified a major NW-SE-trending structural corridor of ~1.2 km strike, interpreted as a flower structure, coincident with surface mineralisation that includes exceptional historical rock chips of 1,825 g/t Ag with 22.5 g/t Au, 534 g/t Ag with 43.9 g/t Au, and 1,250 g/t Ag with 9.3 g/t Au. (ASX Announcement 22/4/2026)

Altitude interprets the high silver-to-gold ratios and low base-metal concentrations to indicate that the boiling zone, where gold would be expected to concentrate, is preserved below the surface.

The drill targeting was led by Principal Geologist Gabe Graf, who was part of the Newmont exploration team that discovered additional mineralised vein systems at the Midas Mine. Midas is one of the deposits being used as a direct model for Firenze.

'Drill Ready' Status

A 2,600m Reverse Circulation (RC) drill program of 9 holes has been designed to test the highest-priority targets from near-surface to 250m depth along the structural corridor, its splays and orthogonal vein systems. A key objective is to determine whether the boiling zone, where bonanza-grade mineralisation can occur, exists at depth.

All drill permits have been approved, the bond has been lodged with the Bureau of Land Management (BLM), and access and drill-site preparation earthworks have been completed.

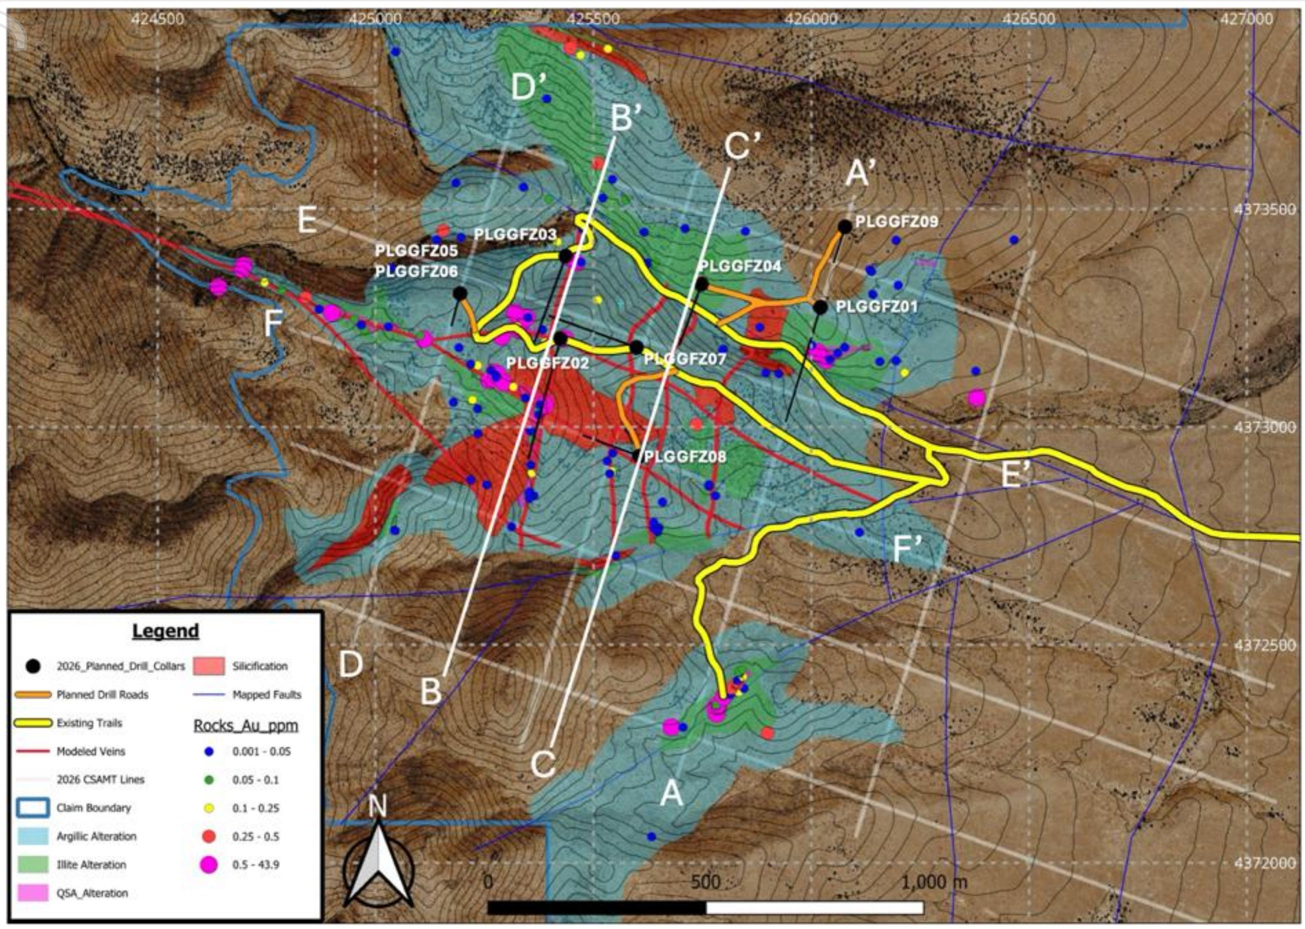

Figure 7. Planned drill collars (black traces) over alteration mapping and rock chips, CSAMT geophysics lines (white), background Google Earth.

W-Project: 'High Quality Ground Secured'

In May, Altitude secured an exclusive Option to Purchase the W-Project, a gold and silver project on the north-east flank of Winnemucca Mountain in Humboldt County, Nevada. The project area is only 8km from the mining city of Winnemucca, with year-round paved road access, and a strong local workforce and mining services. The project sits on the western margin of the Northern Nevada Rift (NNR) – a region known for significant low-sulphidation epithermal gold deposits, including the Sleeper deposit (1.9 Moz Au M&I resource), the Sandman Project (433 koz Au resource) and the Midas Mine (historical production of 2.2 Moz Au and 27 Moz Ag).

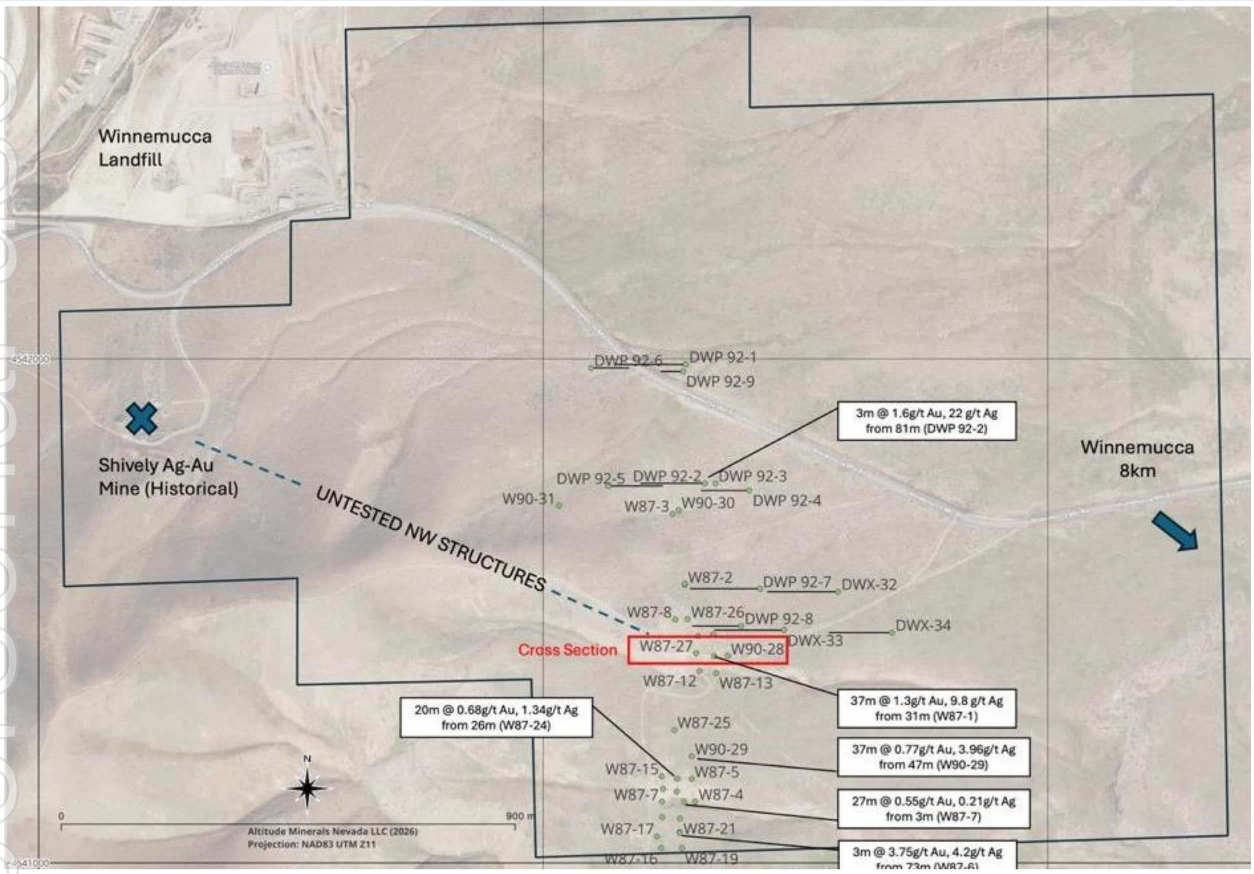

Figure 8. W-Project in plan view; drill collars with drill traces, significant drill intersections over Google Earth background, claim boundary black polygon.

Historical drilling at the W Project has highlighted the system's potential, with 40 of 43 holes intersecting gold mineralisation and 7 ending in mineralisation.

Significant historical intersections include:

- 37m @ 1.30 g/t Au, 9.8 g/t Ag from 31m (W87-1)
- 3m @ 3.75 g/t Au, 4.2 g/t Ag from 73m (W87-6)
- 3m @ 1.6 g/t Au, 22 g/t Ag from 81m (DWP92-2)

Of particular interest to Altitude are the up to 30 m-wide, outcropping, low-sulphidation epithermal Ag-Au quartz/calcite veins over approximately 1,800 m of strike, untested at depth, with untested interpreted structural intersections.

Critically, Altitude's review of the historical data showed that previous explorers did not effectively test for potential high-grade boiling and feeder zones, which are typical of an epithermal gold system.

Figure 9. The Altitude Team conducting field work at the W-Project

In June, the Altitude team commenced its validation process, including geophysical surveys to refine the exploration team's understanding of the structural controls and to define drill targets.

The objective is to be drill-ready in the US autumn of 2026.

Altitude Secures Significant Gold & Silver Project in Nevada (4 May 2026)

CORPORATE

Latest Investor Presentation

On 6 May 2026, Managing Director Duncan Chessell presented live at the RIU Resources Roundup Conference in Sydney. The presentation outlined Altitude's "Pipeline" strategy and introduced the new W-Project.

The presentation slides and video are [available here on the Company's website].

Successful Placement

In May, the Company completed a strongly supported placement to sophisticated, professional and institutional investors, raising $1,155,247 (before expenses) through the issue of 88,865,180 fully paid ordinary shares at an issue price of $0.013 per share. Participants received one quoted attaching option for every share issued, exercisable at $0.034 and expiring 31 July 2027, approved by shareholders at a general meeting held on 26 June 2026.

ASX Announcement:
Successful Placement Completed (6 May 2026)

Deal Terms of the W-Project Transaction

Altitude Minerals Ltd secured an exclusive "Option to Purchase" Agreement with the vendor, MinQuest Ltd, over the W-Project claims via a sign-on Option fee of US$10,000, followed by Staged Option Payments, which can be offset against outright purchase at Altitude's election.

ASX Announcement:
Altitude Secures Significant Gold & Silver Project in Nevada (4 May 2026)

Business Development

The Altitude team continued to review new project opportunities during the quarter, with a particular focus on Nevada, to extend the long-term pipeline of drill targets. The Company's project selection criteria remain focused on in-demand commodities, favourable jurisdictions, proximity to known economic deposits, and the ability to rapidly validate drill targets for low-cost testing.

Share Capital Changes

During the quarter, the Company undertook capital raising activities, which included the issuance of shares and unquoted options. Details of these changes are as follows:

Altitude Minerals	**Quoted**		**Unquoted**				
Class of Security	**Ordinary shares (ASX:ATT)**	**Options ($0.034 31 Jul-27) (ATTO)**	**Options ($0.26 18 Dec-26) (ATTAI)**	**Options ($0.15 31 Jul-27) (ATTAJ)**	**Options ($0.034 31 Jul-27) (ATTAL)**	**Options ($0.06 31 Dec-28) (ATTAB)**	**Performance Rights (ATTAF)**

Cash Balance

As of 30 June 2026, Altitude Minerals maintained a cash balance of $1.1 million.

Related Party Payments

Altitude Minerals discloses that payments to related parties of the Company and their associates during the quarter totalled $120,000. These payments were related to Executive and Non-Executive Director fees, which were paid as salaries and to entities nominated by relevant Directors.

Significant June 2026 Quarter ASX Announcements

The following significant announcements and exploration results were lodged with ASX during the June Quarter and thereafter.

2026	Title of Announcement
20 April	Geophysical Surveys Completed at Byrock Project
22 April	Firenze Drill Targets Confirmed and Drill Permits Secured
4 May	Altitude Secures Another Significant Gold & Silver Project in Nevada
6 May	Compelling Drill Targets Defined at Byrock Project
6 May	Successful Placement Completed
6 May	Investor Presentation – RIU Resources Roundup Conference
25 May	Drilling Permits Issued & Rig Contracted – Byrock Project
12 June	Drilling Commenced at Byrock Copper Gold Project

JORC Information

This report includes regional data from the South Australian Government websites, NSW Government websites sourced from public data, as well as the Company ASX Announcement listed in this report and/or cross-referenced in this announcement. References to neighbouring projects have been obtained from company websites, reports and/or ASX announcements.

The Company confirms that it is unaware of any new information or data that materially affects the information included in these announcement(s). The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original announcements.

APPENDICES

Mining Exploration Activities

During the quarter, the Group incurred $1,000k on exploration activities, as detailed above. This expenditure covered joint venture contributions related to drilling at the Byrock Project and associated expenditure, including travel, site access and tenement maintenance costs. Expenditure was also incurred on drill readiness of new tenements and field work including reconnaissance, geophysical surveys, surface geochemistry sampling and stakeholder engagement.

Altitude Minerals Ltd

Unlocking shareholder value with high-quality discoveries

Altitude Minerals Ltd (ASX: ATT) (formerly Copper Search Ltd) is an ASX-listed explorer with a pipeline of large-scale drill targets across multiple projects and commodities, most of which are all within geological domains containing established profitable mines. The key to executing Altitude Minerals' strategy is successfully identifying the best drill targets that can be made ready for drill testing with only a few months of low-cost fieldwork. The Company has spent several years assembling a Board, Exploration Team, and group of commodity experts who have been involved in multiple significant discoveries, to accelerate Altitude's mission.

7.5	**Unused financing facilities available at quarter end**	-
7.6	Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.	

8.	**Estimated cash available for future operating activities**	**$A'000**
8.1	Net cash from / (used in) operating activities (item 1.9)	(1,212)
8.2	(Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	-
8.3	Total relevant outgoings (item 8.1 + item 8.2)	(1,212)
8.4	Cash and cash equivalents at quarter end (item 4.6)	1,115
8.5	Unused finance facilities available at quarter end (item 7.5)	-
8.6	Total available funding (item 8.4 + item 8.5)	1,115
8.7	**Estimated quarters of funding available (item 8.6 divided by item 8.3)**	0.9

Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Answer: Yes. The Company is planning ongoing exploration activities to progress its existing and newly acquired projects including drilling programs as noted above.

8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?

Answer: Altitude Minerals has in the past undertaken share placements and other forms of fundraising activity. The Company reasonably expects to be able to raise further equity on reasonable terms to further advance its projects .

8.8.3	Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?
Answer:	Yes. Altitude Minerals expects to be able to continue its operations and to meet its business objectives following fundraising activities as detailed above. If funding support is not sufficient to meet planned expenditures, the Company will further reduce corporate expenditure and other activities as required.

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies that comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 14 July 2026

Authorised by: Duncan Chessell, Managing Director of Altitude Minerals Limited
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
