Mobile Phone and Seatbelt Technology Contract Extension in Queensland

Highlights

- Queensland Department of Transport and Main Roads has exercised the first of two twelve-month extension options for the first tranche of mobile phone and seatbelt detection enforcement services deployed in Queensland during 2021
- The service terms for the initial batch of fixed sites and trailer units have been extended and are aligned to an end date of 30 November 2027
- The incremental contract value associated with the extension is expected to total approximately A\$4.3 million (excluding GST)

Acusensus Limited (ASX:ACE) (**Acusensus** or the **Company**) is pleased to announce an extension of its existing agreement with the State of Queensland, acting through the Department of Transport and Main Roads (**TMR**), for the provision of mobile phone and seatbelt enforcement technology in Queensland (**Extension Agreement**). The enforcement solutions detect illegal mobile phone use and seatbelt non-compliance, providing prosecutable evidence that supports enforcement and helps change driver behaviour.

TMR has exercised the first of two twelve-month options, aligning the service term end dates for the initial batch of fixed site and trailer units first deployed in Queensland during 2021 to now end 30 November 2027. The incremental contract value associated with the extension is expected to total approximately A\$4.3 million (excluding GST).

The program has been expanded twice, with the first expansion announced on 15 August 2023 and the second on 11 December 2024. The rollout of the second expansion which will close to double the number of mobile phone and seatbelt trailer units is progressing well, with the final tranche of units to be delivered in Q1 FY27. Each unit carries a five year term commencing from its first deployment date.

Acusensus Founder and Managing Director, Alexander Jannink, said:

"I am very proud of the long-standing partnership we have with TMR, which has been proven to have saved lives. TMR was the first jurisdiction in the world to use automated seatbelt compliance enforcement, and the data now shows a significant reduction in unrestrained fatalities on Queensland roads. In addition to the injuries and casualties avoided from deterring phone use and speeding, we estimate that 15 fatalities are avoided each year as a result of TMR's seatbelt compliance initiatives.

Extending these services reflects the ongoing value of the program and our shared commitment to reducing road trauma across Queensland.”

About Acusensus

Acusensus is a technology company that was founded in 2018 with a mission to design and develop artificial intelligence enabled road safety solutions. Collaborating with governments and commercial stakeholders to tackle distracted driving globally is Acusensus’ first priority. Acusensus has pioneered intelligent solutions that provide anywhere, anytime digital evidence that can be used in conjunction with law enforcement to drive behavioural change and improve road safety. Acusensus technology is used to detect and provide prosecutable evidence of distracted driving (mobile phone use), seatbelt compliance, speeding, railway crossing compliance and the monitoring of vehicles of interest.

Leveraging AI and sensing expertise, Acusensus also provides technology that protects workers in live traffic environments. The Forsite by Acusensus road worker safety system integrates roadside sensors, connected wearables and real time analytics to give crews early warning of approaching vehicle risks, delivering the vital seconds needed to avoid harm while generating data that helps make worksites safer over time.

Acusensus listed on the Australian Securities Exchange in January 2023. Acusensus is headquartered in Melbourne, Australia, with offices also in Sydney, Brisbane, Perth, Auckland (New Zealand), Wellington (New Zealand), Christchurch (New Zealand), London (United Kingdom), Las Vegas Nevada (United States) and Hartford Connecticut (United States).
