ASX Announcement

19th Aug 2026

Synertec awarded Melbourne Water Brooklyn Pump Station upgrade

Highlights

- Melbourne Water awards Synertec the delivery phase of the Brooklyn Pump Station IO Upgrade Project following successful completion of the design and scoping phase.
- The combined value of the design phase and delivery phase awarded to Synertec is approximately \$1.1m
- The award demonstrates Melbourne Water's continued confidence in Synertec's technical capability, project delivery performance and understanding of critical water infrastructure.
- The project will upgrade legacy I/O infrastructure and associated operational technology, control systems and communications infrastructure at Brooklyn Pump Station.
- The delivery phase includes procurement, control system modifications, factory and site acceptance testing, installation, commissioning, network integration and handover documentation.

Melbourne, Australia: Technology design and development growth company, Synertec Corporation Limited (ASX: SOP, "Synertec" or "the Company"), is pleased to announce that Melbourne Water has awarded Synertec the delivery phase of the Brooklyn Pump Station IO Upgrade Project.

The award follows Synertec's successful completion of the project's design and scoping phase and brings the combined value of the design phase and delivery phase awarded to Synertec to approximately \$1.1 million.

During the design phase, Synertec worked closely with Melbourne Water to develop the engineering solution for the upgrade of legacy I/O infrastructure and associated operational technology systems at Brooklyn Pump Station. The successful completion of this phase established the technical framework for the project and positioned Synertec to undertake the subsequent implementation and commissioning works.

The Brooklyn Pump Station project involves the replacement of end-of-life I/O blocks with Profinet I/O systems and associated network modifications. The upgrade is expected to modernise key operational technology assets and support improved reliability, maintainability and long-term operational performance at the facility.

The delivery phase includes procurement of required hardware, configuration of Ethernet and Profinet networks, PLC and HMI modifications, factory acceptance testing, site installation and commissioning, network integration, as-built documentation and operational handover activities.

The award reinforces Synertec's long-standing relationship with Melbourne Water and further strengthens the Company's position as a trusted provider of operational technology, automation, digital infrastructure and critical asset solutions for Australia's water sector.

Michael Carroll, Synertec's Managing Director, commented:

"This award is particularly pleasing because it represents the successful progression of the Brooklyn Pump Station project from design into delivery.

Our team worked closely with Melbourne Water throughout the design phase to develop a practical and reliable upgrade solution. Being selected to deliver the implementation phase demonstrates the confidence Melbourne Water has in Synertec's technical capability, project execution and commitment to supporting critical infrastructure.

We value our long-standing relationship with Melbourne Water and look forward to continuing to support the reliability and resilience of its operational technology infrastructure."
