archTIS Wins $119K U.S. Regional Bank Contract

Momentum builds with multiple contract wins over the last two weeks, representing $564K in contract value

---

Highlights

- A$119K contract win with U.S. regional bank for Spirion Sensitive Data Platform
- Second Spirion contract win in two weeks representing $564K in total contract value (TCV).
- Diversifies AR9's customer base across enterprise, regulated industries (i.e. Financial Services) and Military/Government customers.

archTIS Limited (ASX:AR9, OTCQB:ARHLF), a global provider of data-centric software solutions for the secure collaboration of sensitive information, is pleased to announce a new contract valued at approximately A$119K with a Nasdaq-listed U.S. regional bank headquartered in California.

The agreement extends archTIS' presence in financial services and demonstrates the applicability of the Company's data discovery, classification and remediation technologies beyond its traditional government, defence and national security markets.

The customer is implementing an enterprise data retention and lifecycle management program. Like many established financial institutions, it holds more than a decade of accumulated unstructured data distributed across Windows file shares and its Microsoft 365 environment, including SharePoint, OneDrive and Teams. The organisation required the ability to identify legacy data accurately, act on it under defensible policy and evidence that activity to its auditors.

archTIS' Spirion Sensitive Data Platform (Spirion) will be deployed initially across the customer's Windows file share environment, where the majority of legacy data resides, and will apply its own classification alongside existing Microsoft Purview retention and classification labels. Spirion will automate retention, deletion and quarantine actions by file type, location and age, including defined exceptions for legal hold, and will provide management with a clear view of the data landscape and reporting suitable for audit.

The customer selected Spirion for its accuracy, the degree to which retention and deletion policies can be customised to its workflows, its coverage of all in-scope data repositories, and the employee time saved through automation. The contract, which covers software licensing and premium support, was sourced through archTIS' partner channel and has a value of approximately A$119K.

Consistent with practices across industries handling highly sensitive data, the customer has requested that it not be identified. The Company considers that the customer's identity is not material to an assessment of the contract and that the description provided contains the material information concerning the customer and the contract.

Daniel Lai, Managing Director and CEO of archTIS, stated, "Legacy data that should have been disposed of years ago is one of the most underestimated risks a regulated business carries. This customer needed to find it, act on it and prove what it had done for auditing purposes – accurately and at scale. They selected Spirion for its ability to cover all data repositories in scope and automate workflows to address their data retention needs. This contract, alongside the A$445K contract announced to the market on 8 September 2026, further validates the diversification of archTIS' product set through the acquisition of Spirion and shows increasing traction with a broader range of industries that are seeking better ways to find and protect their sensitive data."

Expanding Addressable Vertical Markets

Financial services organisations face a compounding data problem: decades of retained records, expanding regulatory obligations and sensitive customer information spread across cloud platforms, endpoints and legacy file repositories. The same fundamental challenges – discovering, classifying, controlling and remediating sensitive information – exist across banking, aviation, healthcare, critical infrastructure and other regulated industries.

The initial deployment also creates an opportunity for expansion across additional enterprise data sources and into the broader archTIS portfolio, including NC Protect and archTIS Trusted Data Integration (TDI). The contract supports archTIS' strategy of building longer-term recurring customer relationships while expanding its addressable market across both public-sector and commercial organisations.
