

## GENUS SECURES MAJOR INFRASTRUCTURE CONTRACT AWARDS

### HIGHLIGHTS:

- GenusPlus has secured significant power infrastructure contracts with Western Power and Fortescue
- The awards include major transmission, distribution, maintenance and customer connection works in Western Australia
- The aggregate value of the contracts is approximately \$255 million
- The Western Power contracts are scheduled for delivery progressively through to early 2029
- The Fortescue contracts have planned completion fourth-quarter 2027

Infrastructure construction, maintenance and service provider GenusPlus Group Ltd (ASX: GNP) (**Genus** or the **Company**) is pleased to announce that it has secured a number of significant contract awards with Western Power and Fortescue, with an aggregate value of approximately \$255 million. The awards further strengthen Genus' contracted project pipeline across the utilities and resources sectors.

#### *Western Power Contract Awards*

Genus has been awarded contracts by Western Power for the Clean Energy Link – East project (CEL-E Project), transmission and distribution maintenance program packages and a customer connection package associated with Waddi Wind Farm.

The CEL-E Project involves the design and construction of a major augmentation to an existing 330kV terminal to increase transmission network capacity and support the connection and transport of renewable energy from Western Australia's southern region. The project is expected to be completed in early 2029.

The transmission and distribution maintenance program packages comprise works across the South West Interconnected System and are currently scheduled to be completed by June 2027.

The customer connection package forms part of the connection of Waddi Wind Farm to the South West Interconnected System in Western Australia's Mid-West region. The package includes the construction of a new 132kV substation and is currently scheduled to be completed by April 2027.

#### *Fortescue Contract Awards*

Genus has also been awarded two contracts for the design and construction of approximately 60 kilometres of power distribution infrastructure at Fortescue's Christmas Creek and Solomon mine sites.

Fortescue is committed to decarbonising its operations by eliminating Scope 1 and 2 emissions from its Australian terrestrial iron ore operations by the end of 2030. Its decarbonisation plan includes the development of green power generation and distribution.

Genus will undertake design and construction of 33kV power distribution infrastructure within Christmas Creek and Solomon mine sites which includes approximately 425 poles, overhead line conductor, underground high voltage cable and associated hardware.

Peak onsite manning will be approximately 100 personnel, with site access to be gained in November 2026 and the works estimated to conclude in the fourth quarter of 2027 calendar year.

Genus Managing Director, David Riches, said: *"Genus is very pleased to have secured these significant contract awards with Western Power, and Fortescue supporting decarbonisation initiatives in Western Australia."*

*The awards reflect the strength of Genus' capabilities in delivering critical power infrastructure across the utilities and resources sectors and build on our longstanding relationships with both customers.*

*We look forward to safely and efficiently delivering these projects and continuing to support the development of reliable and lower-emissions power infrastructure across Western Australia."*

**The Board of the Company has authorised the release of this announcement to the market.**
